Gradual-N™

Gradual-N™

Gradual-N is the premium slow release nitrogen that helps drive the genetic potential of the crop.

- Crop safe, urea based nitrogen
- Supplies nitrogen for both early and late season plant needs
- 25% to 60% of the nitrogen is in a slowly available form (see table for details)
- All of the slowly available nitrogen will be released within 21 days after application
- The addition of boron balances the nitrogen to obtain proper plant nitrogen metabolism for sugar movement and pollination
- Late season, slow release nitrogen aids in grain filling and crop quality
- Liquid urea contains the biostimulant Transit-S, to drive the nutrient uptake
- Liquid urea contains a proprietary ingredient to aid in the conversion of urea to ammonium within the plant

LATE SEASON NITROGEN = DELIVERS GENETIC POTENTIAL

*Summary of Independent Field Trials, 2013.
Applied at 2 L/ac at BBCH 45.*

Gradual-N Product Family

Product	Analysis	Rate (L/ac)	Timing
N	30-0-0 (60% Slow Release N)	1.0-4.0	Foliar
NB	25-0-0-0.5B (25% Slow Release N)	1.0-4.0	Foliar
Liquid Urea	20-0-0 + Transit-S + TE	1.0-8.0	Foliar
