

Grasshoppers a **BIGGER** problem for 2022?

The team at Peacock Industries has undertaken a discovery mission to learn more about the legend of "Giant" grasshoppers. Are they myths, a thing of the past or a problem for the future?

Farming mysteries with the Peacock team will work to uncover the truth as growers continue to battle with grasshoppers to this day, using Ecobran as a strong weapon in their toolbox for over 35 years!

"Growers turn to Ecobran insecticide bait for help. As grasshoppers get bigger and more plentiful we must be proactive in management!"

ARE GRASSHOPPERS HOPPING TO THE TOP OF YOUR PEST CONCERNS FOR 2022?

GRASSHOPPER PRESSURE FORECAST TO CONTINUE IN 2022

Local officials are once again sounding the alarm that the grasshopper problem Montana producers are facing is not showing any signs of coming to an end. Grasshoppers thrive in warm, dry weather, and populations already were up last year, setting the stage for an even bigger outbreak in 2022.

ECO BRAN IS A GREAT OPTION FOR THOSE WHO USED IT LAST YEAR!

Eco Bran is an insecticide bait used to control grasshoppers, crickets, mole crickets, cutworms, ants and other target pests. Controlling a number of different instar stages, Eco Bran is offering broad-spectrum control while having little to no impact on beneficial insects and pollinators.
