02/20/2024	<b>Adenovirus, Bordetella (Kennel Cough), Parainfluenza</b> Nobivac Intra-Trac3 (Merck) IN in Nose	Andrea Sams	

## Treatments next due

03/05/2024 1 tablet Composure Pro (100 mg thiamine (vitamin B1) chewable tablet)  
 02/21/2024 2 capsule Gabapentin (100 mg gabapentin capsules)  
 02/21/2024 1 tablet Trazodone (100 mg trazodone tablets)  
 02/20/2024 1 tablet Amoxicillin-clavulanate (375 mg amoxicillin/clavulanic acid tablets)  
 05/20/2024 1 dose Bravecto topical for dogs >88-123 lbs (1400 mg fluralaner topical)  
 02/21/2024 1 application Monitor  
 03/22/2024 1 dose Ivermectin (1% ivermectin injectable)  
 03/21/2024 1 tablet Tri-Heart Plus for dogs 26-50 lbs (136 mcg ivermectin chewable tablets)  
 03/11/2024 1 tablet Trazodone (100 mg trazodone tablets)  
 03/26/2024 11 mL Panacur liquid (10% fenbendazole oral suspension)  
 03/26/2024 2.5 tablet Pro-Pectalin Tablets (1 g kaolin tablets)

## Treatment history summary

Date	Treatment	Notes	Supervising veterinarian
03/26/2024 - 04/01/2024	Pro-Pectalin Tablets (1 g kaolin tablets) 2.5 tablet twice a day		
03/26/2024 - 03/28/2024	Panacur liquid (10% fenbendazole oral suspension) 11 mL once a day		
03/21/2024 until further notice	Tri-Heart Plus for dogs 26-50 lbs (136 mcg ivermectin chewable tablets) 1 tablet every 30 days	Give 1 tablet by mouth every 30 days for heartworm prevention.	
03/11/2024 - 04/09/2024	Trazodone (100 mg trazodone tablets) 1 tablet twice a day		Karen Cooley DVM
02/21/2024 until further notice	Ivermectin (1% ivermectin injectable) 1 dose every 30 days	Diluted with Propylene Glycol to 0.1 % solution. Dosed at minimum 0.6 mcg/kg. For heartworm prevention.	
02/21/2024	Pyrantel pamoate (50 mg/mL pyrantel pamoate oral suspension) 1 dose once	Pyrantel dosed at 1 ml/10 pounds	
02/21/2024 - 02/27/2024	Monitor 1 application twice a day	Monitor for vomiting, stool, or not eating. Record on yellow sheet. let veterinarian know if any signs of foreign body are noted.	
02/21/2024 - 02/25/2024	Meloxicam (1.5 mg/mL meloxicam oral suspension) 1.3 mL once a day in the morning	SHAKE WELL. GIVE WITH FOOD. This is an NSAID medication. Do not mix with other NSAIDs or steroids. Can cause GI, renal, and liver side effects. Stop if not eating, starts vomiting, or has bloody or dark black stool.	Kaitlyn Vorherr DVM
02/21/2024 until further notice	Gabapentin (100 mg gabapentin capsules) 2 capsule twice a day	Neuropathic pain medication. If giving for longer than 30 days, do not stop abruptly, wean off over 7 days.	Kaitlyn Vorherr DVM

04/10/2024 08:37

02/21/2024 - 02/27/2024	Trazodone (100 mg trazodone tablets) 1 tablet twice a day		Kaitlyn Vorherr DVM
02/20/2024 - 03/04/2024	Amoxicillin-clavulanate (375 mg amoxicillin/clavulanic acid tablets) 1 tablet twice a day	Light sensitive. Keep in foil pack until ready to use. Antibiotic. May cause GI upset. Give with food.	Kaitlyn Vorherr DVM
02/20/2024 until further notice	Bravecto topical for dogs >88-123 lbs (1400 mg fluralaner topical) 1 dose every 90 days	Flurolaner 280 mg/ml Dosed at minimum 19 mg/pound	
02/20/2024	Antisedan (5 mg/mL atipamezole hydrochloride injectable) 0.2 mL once	for reversal from sedated exam	Kaitlyn Vorherr DVM
02/20/2024	Metacam (5 mg/mL meloxicam injectable) 0.4 mL once	This is an NSAID medication. Do not mix with other NSAIDs or steroids. Can cause GI, renal, and liver side effects. Stop if not eating, starts vomiting, or has bloody or dark black stool.	Kaitlyn Vorherr DVM
02/20/2024	Dexdomitor (0.5 mg/mL dexmedetomidine HCl injectable) 0.2 mL once	for sedated exam	Kaitlyn Vorherr DVM
02/20/2024	Butorphanol (10 mg/mL butorphanol tartrate injectable) 0.4 mL once	for sedated exam	Kaitlyn Vorherr DVM
02/20/2024 until further notice	Composure Pro (100 mg thiamine (vitamin B1) chewable tablet) 1 tablet once a day in the morning	0-30 = 1/2 chews SID; 31-60 = 1 SID; 61+ = 2 SID. Can give up to TID.	Kaitlyn Vorherr DVM
02/20/2024	Trazodone (50 mg trazodone tablets) 3 tablet once	Given once to attempt calming for intake. AMS	Kaitlyn Vorherr DVM
02/20/2024	Gabapentin (300 mg gabapentin capsules) 1 capsule once	Given once to attempt calming for intake. AMS	Kaitlyn Vorherr DVM

## Diagnostic tests

Date	Test	Results
03/23/2024	<b>Fecal float</b> Fecal analysis (generic)	1+ hookworms
02/20/2024	<b>Heartworm test</b> SNAP Heartworm RT (IDEXX)	Negative

## Physical examinations

### 03/23/2024 Shelter Technician Exam by Cherokee Clark

#### Subjective:

Loose stool/Diarrhea noted on rounds.

BAR, eating well.

#### Objective

Fecal score 6.

#### Diagnosis

Hookworms

#### Assessment

Intestinal parasites: hookworms

#### Plan

Deworm and give probiotic orally until resolution of diarrhea. Monitor stool quality until diarrhea resolves.

### 03/11/2024 Public Wellness Clinic by Dr. Karen Cooley

#### Subjective:

Patient presents for sneezing/wheezing. Issue started Friday 03/08/24 but has gotten less. Sneezing occurs when outdoors and when letting out of crate. No nasal discharge present, Eating and drinking fine, and no vomiting or diarrhea. ( Owner

04/10/2024 08:37

wants to check if stitches can be removed, if Bordetella should be provided and if anxiety meds(Composure) can be refilled. Patient is on Gabapentin due to prior injury.

**Objective**

weight	48.2 lbs	Temperature	99.9°F
Mucous membranes	Pink / Moist / 1 Sec	Attitude	BAR
Hydration	Normal	Pain	None

Eyes	No ocular abnormalities detected
Ears	No aurial discharge or abnormalities detected
Nose/Mouth/Dental	No nasal discharge. No obvious dental or oral abnormalities
Lymph Nodes	No peripheral lymphadenopathy
Cardiovascular	Normal sinus rhythm, no murmurs ausculted
Respiratory	Normal lung sounds. Normal respiratory rate and effort
Abdomen	Soft and non-painful, no abnormalities detected
Urogenital	No external abnormalities. Rectal examination not performed
Neurological	Normal gait and mentation. Full neurologic examination not performed
Integument	No evidence of parasites, masses, or other lesions
Musculoskeletal	No evidence of lameness. Full orthopedic examination not performed

**Plan**

Rx: Trazodone 100mg, 1/2 to 1 BID x30 days. #60 tablets.

Advised: 25mg tablet of Benadryl, 1.5 - 2 tablets BID.

**02/20/2024 Shelter Veterinary Exam by Kaitlyn Vorherr**

**Subjective:**

-patient presented as stray via ACO - injured mouth and paws on catch pole and had blood on kennel floor  
-patient tolerated pole then leashing after dose of trazodone and gabapentin, but still maintaining stiff body posture. Allowed herself to be muzzled and handled enough to administer sedation for exam and intake (needed thorough oral exam and patient had evidence of foreign material from her rectum)

**Objective**

Mucous membranes	Pink / Slightly dry / 2 Sec	Attitude	QAR
Hydration	Dehydrated (5-7%)	Pain	Moderate

BSC 3.5/9

sedated with 0.4ml butorphanol (10mg/ml) + 0.2ml dexdomitor (0.5mg/ml) IV for examination - then reversed with 0.2ml antisedan (5mg/ml) IM

Eyes	No ocular abnormalities detected, full ophthalmic exam not performed
Ears	No aurial discharge or abnormalities detected
Nose/Mouth/Dental	No nasal discharge. approximately 2cm mandibular lip laceration located in area of central lower incisors. moderate laceration on gingiva associated with region of 103-201 with all incisors in the area missing. soft tissue swelling associated with right commissure. did not appreciate overt evidence of wounds in the area. other teeth have evidence of wear and tartar
Lymph Nodes	No peripheral lymphadenopathy
Cardiovascular	Normal sinus rhythm, no murmurs auscultated, strong and synchronous femoral pulses
Respiratory	Normal lung sounds. Normal respiratory rate and effort
Abdomen	Soft and non-painful, no abnormalities detected prior to sedated exam noted foreign material protruding from rectum. Was able to use manual traction and palpation to slowly work material out/remove it - appeared to be combination of fabric and thin plastic material.
Urogenital	No external abnormalities. Rectal examination not performed; mature mammary chain, no overt evidence of scar or tattoo, consistent with intact female
Neurological	Normal gait and mentation. Full neurologic examination not performed

Integument No evidence of parasites, masses  
 area of dried blood on ventral thorax. some abrasion - did not appreciate significant/deep wounds

Musculoskeletal No evidence of lameness. Several nails on all paws worn down to quick/evidence of prior bleeding; applied combination of silver nitrate stick and quick stop. Full orthopedic examination not performed

**Assessment**

- lip laceration
- gingival laceration/dental trauma
- soft tissue swelling of right commissure
- worn nails
- Foreign material removed from rectum

**Plan**

Start medical management for oral/dental trauma, florigen body watch, kennel stress medications.

In an ideal situation patient would receive dental radiographs and possible suture repair of gingival trauma/lacerations - this is not available at this facility. Did not pursue repair of mandibular lip laceration at this time due to unknown handling ability post-op should there be any complications.

If patient behavior improves recommend scheduling for spay with recheck oral exam.

wet food only x 14 days

**02/20/2024 Shelter Technician Exam by AMS/NB**

**Subjective:**

Presents for shelter intake and vaccinations.

**Objective**

HW test: Negative

**Assessment**

Appears ok for intake vaccinations and medications.

**Plan**

Proceed with intake vaccination, medication, and testing protocols.

Place into general shelter population.

**02/20/2024 Medical Notes by Kaitlyn Vorherr**

**Subjective:**

see memos regarding behavior

intake team thought patient might be able to be handled for intake with some time/sedation - per ACO patient injured mouth and paws on catch pole

gave one time dose of 150mg trazodone and 300mg gabapentin off of estimated 40#- intake team will see if she can be handled/weighed and examined. If patient cannot be handled still plan to start medical management for suspected discomfort secondary to injuries and monitor
