Exp. Date	04/24/2025	Site	Right hind leg
Vaccinated By	Jessica Ballenger	Clinic	None
Veterinarian	Sarah Reardon DVM	Rabies Tag Number	05359
Notes	None		

## Treatments Next Due

### Gabapentin

100 mg Gabapentin capsules  
2 capsule(s) PO (by mouth) twice a day (BID)

10/31/2024 – Overdue

### FortiFlora Canine

Probiotics granule/powder  
1 package(s) once a day (SID)

11/06/2024 – Overdue

### NexGard PLUS Chew for Dogs, 33.1-66 lbs.

75 mg Afoxolaner chewable tablet, 360 mg Moxidectin chewable tablet, 150 mg Pyrantel chewable tablet  
1 tablet(s) PO (by mouth) every 30 days (Q30D)

11/29/2024 – Overdue

### Doxycycline

100 mg Doxycycline hyclate tablets  
tablet(s) PO (by mouth) twice a day (BID)

11/06/2024 – Overdue

### Enrofloxacin

68 mg Enrofloxacin tablets  
1.5 tablet(s) PO (by mouth) once a day in the morning (SID (AM))

11/22/2024 – Overdue

### Panacur granules

22.20 % Fenbendazole granule/powder  
1 dose(s) PO (by mouth) once a day (SID)

11/22/2024 – Overdue

### Doxycycline

100 mg Doxycycline hyclate tablets  
2.5 tablet(s) PO (by mouth) twice a day (BID)

12/12/2024 – Overdue

## Treatment History

### Panacur granules

22.20 % Fenbendazole granule/powder  
1 dose(s) PO (by mouth) once a day (SID) for 3 days

Notes: Scoop sizes 5lb 10lb 25lb 75lb Mix into a small amount of wet food or moistened dry food once daily

Notes: Scoop sizes 1/8, 1/16, 1/32, 1/64. Mix into a small amount of wet food or moistened dry food once daily.

Veterinarian: Bailey Reynolds DVM

10/31/2024 - 11/03/2024 – Complete

### **Gabapentin**

100 mg Gabapentin capsules

2 capsule(s) PO (by mouth) twice a day (BID) for 13 days

Notes: Neuropathic pain medication. If giving for longer than 30 days, do not stop abruptly, wean off over 7 days.

Veterinarian: Bailey Reynolds DVM

10/31/2024 - 11/13/2024 – In Progress

### **Lactated Ringer's Solution (LRS)**

Multiple electrolyte solution

600 mL SQ (subcutaneous) once

Notes: Interscapular

Veterinarian: Bailey Reynolds DVM

10/31/2024 – Complete

### **FortiFlora Canine**

Probiotics granule/powder

1 package(s) once a day (SID) for 7 days

Notes: Mix with a small amount of food.

Veterinarian: Bailey Reynolds DVM

10/31/2024 - 11/07/2024 – In Progress

### **NexGard PLUS Chew for Dogs, 33.1-66 lbs.**

75 mg Afoxolaner chewable tablet, 360 mg Moxidectin chewable tablet, 150 mg Pyrantel chewable tablet

1 tablet(s) PO (by mouth) every 30 days (Q30D) until further notice

Notes: Monthly heartworm, intestinal parasite, flea, and tick prevention.

10/30/2024 - - In Progress

### **Doxycycline**

100 mg Doxycycline hyclate tablets

tablet(s) PO (by mouth) twice a day (BID) for 21 days

Notes: Antibiotic. May cause GI upset. Give with food.

Veterinarian: Sarah Reardon DVM

11/05/2024 - 11/26/2024 – In Progress

### **Enrofloxacin**

68 mg Enrofloxacin tablets

1.5 tablet(s) PO (by mouth) once a day in the morning (SID (AM)) for 7 days

Notes: Antibiotic. May cause GI upset. Give with food.

Veterinarian: Bailey Reynolds DVM

11/20/2024 - 11/27/2024 – In Progress

Benazepril granules

### Panacur granules

22.20 % Fenbendazole granule/powder

1 dose(s) PO (by mouth) once a day (SID) for 3 days

Notes: Scoop sizes 5lb, 10lb, 25lb, 75lb. Mix into a small amount of wet food or moistened dry food once daily.

Veterinarian: Bailey Reynolds DVM

11/21/2024 - 11/24/2024 – In Progress

### Doxycycline

100 mg Doxycycline hyclate tablets

2.5 tablet(s) PO (by mouth) twice a day (BID) for 14 days

Notes: Antibiotic. May cause GI upset. Give with food.

Veterinarian: Kaitlyn Vorherr DVM

12/06/2024 - 12/20/2024 – In Progress

## Active Diagnoses

### Canine Infectious Respiratory Disease Complex (CIRDC)

11/05/2024 – Active

Diagnosed by Sarah Reardon

## Scheduled Diagnostic Tests

### Heartworm Test

SNAP Heartworm RT (IDEXX)

04/28/2025 - Scheduled

## Diagnostic Tests History

### Heartworm Test

SNAP Heartworm RT (IDEXX)

10/30/2024 – Completed

Results Heartworm Disease: Negative

Test By Jessica Ballenger

### Fecal float

Fecal analysis (generic)

10/31/2024 – Completed

Results Fecal-float: Whips and Hooks 1+

Test By Savannah Bright

### X-rays

Other in-house test

10/30/2024 – Completed

**Results** X-rays: ingesta in stomachs, rocks throughout GI tract, chronically fracture femoral necks; hip dysplasia

**Test By** Ariel and Abigail

**Veterinarian** Bailey Reynolds DVM

**X-rays**

Other in-house test

12/06/2024 – Completed

**Results** X-rays: See DMV notes

**Test By** Jo Anne Sebanc/Shay Terrell

**Veterinarian** Kaitlyn Vorherr DVM

**Notes** Abdominal

**Scheduled Physical Exams**

**Tech Exam**

Exam Reason: Diarrhea

12/23/2024 | 8:00 am – Target Date

**Reason Notes** Put 3rd treatment (panacur SID x 3 days) in SL

**Physical Exam History**

**Vet Exam: Shelter Veterinary Exam**

12/07/2024 | 1:42 am – Completed

**Examination By** Kaitlyn Vorherr

**Subjective**

patient returned from offsite boarding and was noted to have a distended abdomen. patient completed a treatment for CIRDC from 11/5-11/26 that included an addition of baytril

**Objective**

BAR, eagerly eats wet food

patient has gained significant weight since last weight on 10/30

<b>Mm color</b>	Pink	<b>Crt</b>	2
<b>Hydration</b>	Dehydrated (5-7%)	<b>Attitude</b>	BAR
<b>Nose/Mouth/Dental</b>	mild mucopurulent nasal discharge		
<b>Cardiovascular</b>	normal sinus rhythm, no murmur auscultated		
<b>Respiratory</b>	no coughing noted, intermittent sneezing. clear lung sounds, normal rate, possible increase in effort, but could be patient variation due to conformation. no crackles or wheezes.		
<b>Abdomen</b>	moderate cranial abdominal distention and patient grunting on palpation and possible firmer structure on left cranial aspect		

**Assessment**

r/o food, organomegaly, fluid, FB, gas

CIRDC vs residual pneumonia vs cardiac (though no murmur or other signs noted today) vs other

Plan

Abdominal radiographs most consistent with gastric distention secondary to food, but cannot rule out other underlying changes obscured by the quantity of material in the GI tract. Concern that patient has undergone a longer treatment with additional antibiotics than typically seen and he is still having nasal discharge. Possible contribution of weight gain and a lower dose of doxycycline originally, but dose variation may not be significant.

Unable to take thoracic radiographs at this time. Continue to monitor ins/outs and clinical signs closely - if no improvement by monday recommend thoracic radiographs and reevaluation of treatment plan. Cannot rule out underlying thoracic changes contributing to prolonged CIRDC signs.

Skip patient's pm meal to allow GI tract time to pass material. Start feeding as typical for shelter protocol. if patient continues to have distention recommend repeating radiographs after patient is fasted and or consider smaller, frequent meals.

Vet Exam

11/20/2024 | 3:48 pm – Completed

Examination By Bailey Reynolds

Subjective

On morning rounds pt has fresh green mucoid nasal discharge.  
Adding Baytril.  
Move to sick hold. ber

Vet Exam: Shelter Veterinary Exam

11/05/2024 | 4:25 pm – Completed

Examination By Sarah Reardon

Subjective

Signs of upper respiratory infection noted on morning rounds.  
BAR, eating well.

Objective

Mucopurulent nasal discharge. Sneezing.  
No cough noted

Assessment

Canine Infectious Respiratory Disease Complex (CIRDC)

Diagnosis Type	Diagnosis Notes	Status
Canine Infectious Respiratory Disease Complex (CIRDC)		Active

## Plan

Move to isolation. Monitor clinical signs daily until CIRDC has resolved.  
Begin Doxycycline therapy at 10 mg/kg PO/BID for 10 days.

This dog has been diagnosed with Canine Infectious Respiratory Disease Complex (CIRDC), commonly known as "kennel cough. This infection is similar to the common cold in humans and causes similar signs: coughing, sneezing, runny nose and sometimes runny eyes. For most dogs, the illness is mild and typically runs its course in 10-14 days. An antibiotic has been started to prevent and treat any bacterial infections causing the infection. Your dog will be contagious to other dogs while it is ill. Therefore, we strongly recommend that you keep this dog separated from any other dogs in the home and do not take it to places where they are likely to interact with other dogs such as groomers, dogs parks, and boarding facilities until your veterinarian has told you it is safe to do so. Uncommonly, this infection can progress to more severe illness like pneumonia, and you should take your dog to your veterinarian if they are showing signs of more severe illness such as constant coughing, lethargy, not eating, or difficulty breathing.

## Vet Exam: Shelter Technician Exam

10/31/2024 | 6:28 pm – Completed

Examination By Savannah Bright

### Subjective

Loose stool/Diarrhea noted on rounds.  
BAR, eating well.

### Objective

Stool color: Brown  
Stool consistency: Fecal Score 5  
Blood in stool?: None

### Assessment

Intestinal parasites: Whipworms and Hookworms 1+

### Plan

Deworm and give probiotic orally until resolution of diarrhea. Monitor stool quality until diarrhea resolves.

## Vet Exam: Shelter Veterinary Exam

10/30/2024 | 9:25 pm – Completed

Examination By Bailey Reynolds

### Subjective

On board to check enlarged abdomen, skin, gait.  
Abdominal palpation revealed sand like material. Pt has good appetite.  
Radiographs reveal rocks in GIT as well as bilateral fractured femoral necks, chronic.

Additional examination performed 10/31.  
Pt has no abdominal pain.  
Dehydrated - mild.  
Heart and lungs - WNL  
Scar tissue noted at distal pelvic limbs and tail. No exudate noted.

Pt has decreased ROM in pelvic limbs and abnormal conformation in all 4 limbs. Muscle wasting in pelvic limbs. Crepitus at stifles and hips. Thickened carpi and elbows. Symmetrical ambulation.

a: chronically fractured femoral heads; abnormal conformation; rock foreign bodies - moving through, intestinal parasites

p: pt will always have abnormal gait issues. Surgical consult could be beneficial but may not be a surgical candidate due to other issues.

Any adopters must have a vet consult, approval. ber

## Vet Exam: Shelter Technician Exam

10/30/2024 | 1:29 pm – Completed

Examination By Jessica Ballenger

### Subjective

Presents for shelter intake and vaccinations.

### Objective

HW test: Negative

### Assessment

Appears ok for intake vaccinations and medications.

### Plan

Proceed with intake vaccination, medication, and testing protocols.

Place into general shelter population.

SHELTERLUV
