

Epilogue:

Loose ends: Climate Change: Governments of the world pushing hundreds of millions of people into poverty by spending huge sums that could be better used to enhance quality of life is insane. Bezos reportedly is going to give ten billion substantially to reduce carbon which is a waste because climate is caused by the internal heat of the planet and by the heat of the sun. And man's futile attempts to alter gas will have very brief and transitory effect if any at all and the costs are excessive which is easily shown if any cost benefit analysis is done – and none has been done.

The big bang and the planet cools and the sun ever heats and cools in repetitive cycles lasting deciem millennium until it incinerates the planet. To suggest that net 0 will stop global warming is ignorant and exhibits low IQ; even with net 0 the sun is going to heat the Earth to incineration – for sure for sure

and do you really think that net 0 is going to stop global warming? The science says that it can not.

Musk's plan to colonize Mars is good since in far future time all life will be on Mars but it is a good bet that nothing that man can do is going to change Earth's climate even for a short time and the goal of preventing a 2 degree rise is arbitrary and quite frankly ridiculous.

Bezos will be the greatest humanitarian but not because of money he wasted on climate change but it will be because he built a human benevolent AI or so says the Oracle.

Bezos should spend his money on hydrogen fusion research and hydrogen fusion will allow us to have high quality life on earth regardless the temperature and eventually to thrive in large numbers on Mars.

Swings in Earth climate: colder / warmer / colder / warmer / colder / warmer ect. will continue for maybe a

billion more years or until such time as Earth becomes uninhabitable. The current hot peak is going to be hotter than the last but the good news is that we are going to be able to live here on Earth just fine with minor adaptations to compensate for climate for the next ten thousand years for sure and most probably for a lot longer than that – but the consummate arrogance of the idiots who run the governments of the Earth that we must sacrifice quality of life by reduction of what we use and by limiting human caused CO₂ to save the lives of future generations yet unborn is really, really stupid.

To think that man is going to stop the cycles of colder / warmer / colder / warmer / colder / warmer which have continued for the last billion years and which will most probably continue for the next billion years regardless of anything man might do to control greenhouse gas is ignorant; but the governments rely on “experts” knowing that they

themselves are not so smart and yet they then pick one or more experts by a process of eny meeny miny moe as the “official” experts and all dissent is suppressed.

Sure climate is changing, and the world is trending to be warmer but greenhouse gas is not the culprit.

Somebody noticed that the higher the greenhouse gas the higher the temperature. They correlate; but there is no cause and effect. Cause is greater radiant energy from the sun causing both greenhouse gas and temperature to be higher.

There will be no significant effect on warming even if governments reduce the standard of living to

that of the Stone Age and then forbid the population the use of fire.

All factors taken into consideration natural gas is the least polluting fuel when compared with gasoline, oil, diesel, solar, atomic, wind, or coal, and it is cheaper and more reliable than any of them.

Electric and hydrogen are the most non-polluting and therefore natural gas should be used to produce electricity and in Texas we have a cheap and inexhaustible supply.

Steam reforming of natural gas should be used to produce hydrogen. In Texas we have a vast supply of natural gas.

Eliminate coal, oil, atomic, solar and wind

1. Energy source: Natural Gas produces

Electricity and produces Hydrogen

2. Energy source: Hydrogen produces Electricity

and produces Hydrogen

3. Energy source: Hydrogen Fusion to produce

electricity and to produce Hydrogen

Sole energy source 100% non-polluting =

Hydrogen Fusion to produce Electricity

replacing Gas

4. Energy source: Hydrogen fusion

Use of Texas natural gas as the sole generator of electricity in Texas is the way to a 100% clean energy future with the least pollution and lowest cost – using natural gas to produce all electricity

**until we are able to switch to all hydrogen
electricity generation.**

Ultimately electric cars will give way to hydrogen powered cars as hydrogen technology improves over time.

To Bezos I say:

Please understand your monopoly will not just be split up it will be fragmented unless you follow the rest of my plan that you declare Amazon to be non-political (the sales and delivery, book publishing and the computer services i.e. all of Amazon excepting only maybe the movie business must be just a business with no social or political philosophy) – and a test is imminent. I intend to publish this book and to sell it on Amazon. This book is not politically correct – is the book available on Amazon?

To James Cameron I say: the only further contact you will have from me is possibly to acknowledge receipt of cash

and our contract remains the same: ten million if paid to me no later than December 10, 2023 and ten million plus one percent of the gross if paid after that date and you are disinvited to the Pensacola conference.

To Alan Dershowitz I say: you will have no further contact from me which you say suits you fine – right? Ha ha. But I must remind you that I invited you to Pensacola what was it – maybe 5 years ago? Precog that I am, and that I suggested we should first discuss the nature of God. And now you find yourself on a piece of Earth that has split off and is careening into the void. But the saga of Beauty and the Beast continues unabated with higher probability of the Beast's success with you no longer poisoning the well. I intend to offer Beauty the job of personal assistant at 10K a month payable annually in advance on initially a one year contract.

Do as you will it makes no difference because
empowered she will do as she desires.

To Elon Musk I say: you pretty much have to do the
bitcoin thing – it is your duty to the stockholders of Tesla who
will see the value of their stock sky rocket as bitcoin
appreciates and as the U.S. dollar depreciates dropping like a
rock in value as inflation ravages the Earth.

I tell you this truly as an Oracle and as the man who has
seen the future.

Tesla should become miner of 75% of mined bitcoin
worldwide with a gas fired powerplant to be located in
Guadalupe Pass dedicated to providing energy for all Musk
industries interconnected with the New Mexico grid and
providing maybe 50% of the power generated into the Texas
power grid at no cost to Texas taxpayers. Bitcoin will be
mined with a beta model quantum computer which maybe will

morph into the future AI. Texas will declare that bitcoin the world over can be exchanged for cash on the Texas Exchange over the net at a posted daily dollar amount and can be exchanged on a one for one basis for Texas Bitcoin which will be legal tender in Texas to purchase anything – Texas Bitcoin works the same way as old bitcoin excepting only that the algorithm to validate transactions is harder or easier and can be adjusted up or down and the mining of Texas bitcoin is allowed anywhere but in fact the new coin substantially will all be created by swap of old bitcoin or by direct purchase on the Texas exchange and elsewhere by payment of U.S. dollars for Texas bitcoin and price for Texas bitcoin and old bitcoin will always be identical at a Texas Exchange posted daily value. A will buy at this price and will sell at another price daily post. After a time all old bitcoin will be swapped for new bitcoin and mining will cease altogether and Texas

bitcoin will continue as legal tender with amount to be increased only by purchases on the Texas exchange and will be used by swap in U.S. dollar purchases and can forever be swapped one for one for old bitcoin. Most of this can be done by you alone with Texas law facilitating – which we will arrange at Pensacola.

This all works perfect since bitcoin is limited to maybe six hundred thirty billion current value U.S. dollars worth and only about sixty-seven billion five hundred million remain to be mined and the end result is that Texas will have a bitcoin reserve of twice the value of the United States gold reserve and bitcoin will be in circulation as legal tender for all debts public and private at least in Texas if not in all the world.

You are a national treasure and you will be instrumental in raising the American standard of living to heretofore undreamed of heights if you will but allow me to provide you

direction and to referee – your personal competition and government regulation.

I suggest that you shall buy the Texas Gold Depository – and operate it in conjunction with a new Texas Commodities Exchange modeled after the one in Chicago initially trading bitcoin, precious metals and Texas agricultural products and oil and gas and electric power. An adjunct Stock Exchange is also to be created initially only selling Texas stocks – including Tesla, Amazon, ect. after the corporations are re-constituted and current stockholders get a 1 to 1 exchange.

I suggest that you move to Texas and you already have – complete the move by vacationing only in Florida and eliminate California taxes.

I suggest that Bezos essentially do the same.

I suggest that both of you should re-incorporate in Texas by sale of everything to Texas shell corporations.

I suggest that Jassy should go to Pensacola say fourth of July 2022 and that he should give Blue Origin to Musk who will then buy computer services from Jassy including 5G now and 6G soon which Musk will sell worldwide and crush the Chinese competition.

When I was 12 years old Americans had great freedom and great wealth and the U.S. was the greatest military power the world had ever seen – and that reality was what the founding fathers had faith that their conscious actions would achieve.

Today American freedoms are being abridged by some of our elected leaders and big tech and out of his mind Biden says Americans have no need for an AR-15 because it really provides Americans no protection against tyrannical government because he has F-15's and could bomb the people

were they to revolt and fools and fellow travelers, communists and hostile to America foreign governments applaud him.

This May 21, 2021 book is set for publication tomorrow July 5, 2021.

But by the magic of electronics I am able to insert into the PDF a fourth of July message to the American people from the twelve year old that won the Texas statewide essay contest “Faith of our Fathers Living Still.”

I wrote that if we kept the faith of our fathers we all, as individual Americans, would have the greatest personal liberty of any people on the planet and that we would always be the richest people with the highest standard of living on the planet. And that if we did not keep the faith that this nation would “plummet like ripe fruit into the hand of oppression.”

Today we are an oppressed people because communist ideology pervades the nation.

Biden is not to blame – he is a good man, a long time patriot and public servant who has lost his mind and is now held in thrall by world government, communist, ideology that commands that Americans shall be reduced to the median wealth level of the world as a whole and to that end he is instituting economic policy that will result in inflation that will ravage individual wealth and concentrate what wealth remains in the collective and he is opening America up to unlimited immigration of the poor of all the world perhaps each penny less immigrant to be paired with a working American who will have to share until American citizen and unlawful alien are equal in wealth.

Biden policy is that the federal government is supreme in all things and that Title 10 and the Constitution and the Bill of Rights are all subservient to the supremacy clause and that government will take from everyone all that they produce and

give back to everyone a portion of it equally regardless of disparity between what individuals produce – which is the essence of communism in massive wealth redistribution public welfare programs.

Mark Levin has a new book out about “American Marxism.” Read it. See: 178 Branco Political Cartoons

Is the faith of our fore fathers living still?

Those of our people who have faith are in revolt and heavily armed men are being sent by the governors of several states to assist the Governor of Texas – some sending troops others sending police.

A top United States Navy leader is educating our warriors about critical race theory telling them that our founding fathers were racist as predominantly black mobs topple their statues and burn cities controlled by critical race theory fellow travelers.

Our top military leader publicly announced that he is vetting federal troops to determine which of them have white supremacist views – and will thus be unavailable to put down the revolt. Our Secretary of State has announced at the U.N. that **“we have met the enemy and he is us”** urging a U.N. investigation of U.S. racism. What’s next? U.N. peace keeping troops perhaps?

The United States Congress is split by proposed investigation of the riot at the Capitol.

Biden blames Trump. But Trump did not encourage the riot – his failing was that he summoned a large number of people and complained about voting irregularities and then neglected to tell the crowd what he wanted them to do about it.

The riot was orchestrated by agent provocateurs under the observation and control of the FBI and the “riot” would not have happened without them. Pretty much like the FBI’s

observation and control of the kidnapping of the Governor of Michigan.

Federal intelligence agencies, under Biden's control, have turned most of their resources toward gathering intelligence on American citizens who are unaffiliated with any foreign power – under the rubric of ferreting out treason.

Please recall that the head of the CIA, Brennan – a long time communist attempted to subvert the Presidential election by unlawfully gathering information about Trumps election team and when that failed Brennan and his cohorts attempted to frame Trump for treason using false dossier that included now admittedly false affidavits from the FBI and others certifying that the dossier was true.

The dossier, inter alia, provided “evidence” that Trump was treasonously colluding with a foreign power.

Life imitates art; but Biden is the Manchurian Candidate,
not Trump.

The question is how much damage can the fools and communists do before the Republicans gain control because if Biden has his way the economy will be damaged beyond repair by 2024 and the more immediate question for me is should I publish this expose before I have perfected my escape to Iceland?

You are probably sitting at home right now thinking – gee I wish I was a billionaire like Cameron, Bezos, and Musk and could wire transfer some cash to Dillard – well rejoice and be exceeding glad because you too can send me some money!

I have set up an account at my bank where I am currently overdrawn \$526.95 and wire transfer instructions are:

Wire to: First Mark Credit Union

Address: 2023 Gold Canyon, San Antonio, TX 78232

ABA Routing Number: 314088556

For Credit to: Carver G Dillard, also known as Carvel
Gordon Dillard

Account Number: 00000682144100

Do not send any money unless you believe that I am doing
you some good and you wish to show your support – and if
you do send me even as much as a dollar I will very much
appreciate it and if wire transfer is too much trouble just U.S.
mail a buck to: Carvel Dillard, 11306 Whisper Willow St., San
Antonio, TX 78230.

Sure I have asked the billionaires to send cash – but:
Bezos who I figured would provide all the cash is hamstrung
because all my communications with him are reviewed by the
NSA, CIA, and Google long before he ever sees it – that is if
he sees it. All communication with Bezos has to go through

Andrew Jassy – and I do not know if he is short stopping it or not.

I provided “Bezos” with a detailed plan to obtain computer superiority and put Google out of business. Key to that plan is cooperation with Musk. I asked him for a lump sum of 50 million in order for me to facilitate the plan which included, inter alia, the takeover of certain small businesses and the multi billion dollar takeover of certain large businesses which is problematic for him since he is under anti-trust attack because of monopoly now – although his monopoly does not extend to computer and software services at least not yet. The plan is to provide you – American citizens – with better software than Microsoft and better search than Google. And when I say “better” I mean that “Bezos Search” and associated services will eliminate big brother from watching you and will eliminate the compilation of data about you including your

political affiliations, social media leanings, and geographic location – which data is now being illegally collected and used for political purposes and for behavior control. Google and Microsoft have an agreed agenda to push “climate change” philosophy that includes that everyone alive today must reduce the resources that they use – become poorer – in order to conserve resources for future generations and that only renewable energy should be used – wind and solar – in order to conserve resources for future generations and to reduce pollution and that this philosophy should be imposed upon the American people by prohibitions against future drilling for oil and gas and cancellation of the Canada to Texas pipeline and the imposition of carbon taxes and by government restrictions on the car you drive, the house you live in and what your children can be taught in school. But Bezos great humanitarian that he is or will be is maybe going to save us

from all of that – or so says the Oracle. But right now, the Oracle is a little bit light in the cash department. My not insubstantial wealth was lost when I was defamed, framed and unlawfully convicted of 29 felonies and the sentences were stacked to run consecutively and I was sent to a supermax prison – I used the power of my mind to get out but then I had to flee the state of Oregon ahead of a new no probable cause indictment. The indictment was then dropped because Ellen Rosenblum, the Oregon Attorney General, knew that the then Governor of Texas, Rick Perry, would never allow me to be extradited on bogus charges.

But if I ever were to go back to Oregon – even now – I might be arrested on new trumped-up charges since both Governor Brown and Attorney General Rosenblum are at risk of my forcing their resignations and Rosenblum is at risk of prosecution for Graft on my information.

Should I let them off or not? I think not but maybe I will allow Oregon to pay me 11 million dollars in settlement and let them go perhaps if they include letters of apology.

Between the time that I sent a draft copy of this book to Governor Abbott asking him to unsuspend my driver's license and this writing he has done it.

But President Biden who I also send a draft copy has ignored my request for a passport which leaves me at risk of arrest on trumped-up federal charges ahead of my planned escape to Iceland. I need to do some physics research in Iceland and I think I can but I need 11 million to finance Texas to Sweden to Iceland to Florida – and to the Pensacola conference.

According to the future AI all I need to do to get the cash is ask for it, but the AI neglected to specify exactly who I was supposed to ask – you maybe?

I assumed that I would get the cash from Bezos.

But exposure of our communications leaves him in a tough spot.

Attempt was made to meet with him at a safe house – where presumably we could communicate in private, but it was in the middle of the pandemic, we were 2000 miles apart and nobody could fly although I offered to drive – but Bezos has to protect himself because the NSA, CIA, deep state and others including Google are all privy to exactly the plan for him to supplant Microsoft and Google. Which is why I now publicly expose it – complete transparency just like the Musk Letter – now being best protection against unlawful actions against me and mine.

But as soon as Bezos announces that he or Amazon is moving to supplant Microsoft and Google, U-Tube ect. He will come under attack and transparency steals their fire and

by public exposure I am acting in a manner consistent with Bezos best interest.

A Republican will win the presidency in 2024 and in 2028.

The problem is that Biden may destroy the U.S. Economy beyond any recovery and push the nation to the brink of civil war by 2024.

Certainly, that is not Biden's intent but Biden has obvious cognitive problems and he is unable to change a pre-set plan even if it is going horribly wrong – he cannot think on his feet – and without his hand held notes and a teleprompter he loses track of where he is and what he is supposed to be doing.

Biden should resign and turn everything over to Harris – and that is exactly what he wants to do – and he cannot because it is obvious to everyone that she is incompetent.

But he should do it anyway because the nation would be far better off with an incompetent person with all their wits about them as president as opposed to a person with Alzheimer's as president.

Making a judgement about anything independent of his advisers is beyond his capacity now.

I tried reaching out to Harris even before the inauguration providing her with economic data – and telling her how much I enjoyed the little girl on the bus story and telling her that it can be uplifting to all America but only if she takes command and acts on a color blind basis – and to follow Biden's directions will result in her administration being shortest and most reviled in American history. Her stellar performance at the southern border (stellar meaning brilliant as in satire) most regrettably indicates that she is going the short route.

If I could talk turkey with her for about twenty minutes in private, I might be able to turn it all around because she is not stupid – but she is I fear hopelessly misguided.

I have explained to Bezos or at least to Jassy that all either one of them need to do is wish for anything and Genie that I am the wish will be granted. But that only works if we have private communication which I have gone to extremes trying to accomplish – with no success.

What does the richest man in the world, a man who has everything want? My hope is that he still has a desire for something that somehow he believes that he cannot have – perhaps something personal that he thinks no one but God could give him – but I would say to him no problem. I have a direct pipeline to the Almighty. Wish granted! Also, there is the question of how much of Amazon is Jassy?

Jassy is an interesting fellow and coincidentally his area of greatest expertise is the cloud. And I do not believe in coincidence and remember this is all pursuant to construction of a quantum cloud artificial intelligence.

But, Bezos and Jassy are not going to come up with cash quick enough to fund the Pensacola conference which I figure needs eleven million. I will not be hurt if they ignore my prediction. But I figured that I could get Cameron to, as a courtesy, advance pay me ten million for the movie rights to this book. I mean why would he not because I have sent him a copy of stuff that is not in the book – stuff like how I can by mental concentration have the grocery checkout girl in a daze hand me back all the cash I just gave her along with the groceries receipt – I offered a demonstration at the supermarket of his choice. Except that it cannot be at Alon HEB where I almost always grocery shop – I have done it

twice there and once at another supermarket and always for a very nominal sum and I always next time at store buy items with dollars off in store coupons in excess of amount I cause the girls to subconsciously give me and then I do not use the coupons and HEB is actually about a buck ahead.

But the fourth time I tried a more ambitious mind over matter scheme that I best explain in detail.

Everything is a state of mind. Indeed, if you can conjure up the right state of mind you can manifest anything you desire – if it be the actions of other people or animals or you can keep yourself healthy or even transform yourself into your younger self – all by conscious adjustments to your state of mind – and practice makes perfect.

I had about \$120 worth of groceries in my cart including twelve cans of my favorite energy drink which sells for \$1.50 a can but for which I had 3-\$1 off coupons – it was hand the

clerk the coupons and when she scans them the drinks cost \$1.25 or four for five dollars.

I have practiced subliminal influence on people with varying degrees of success and on dogs with almost every time success, but I have had no success with condensed matter objects – you know bend the spoon kind of stuff. And I thought: I wonder the result of mind on something that is not alive but is moving at an infinitely higher rate than most condensed matter say light. I thought: well, I will just concentrate on the laser scanner at check out and tell it not to scan an item. And I did. But all 12 cans of energy drink appeared to be scanned but when the girl scanned the coupons – I had 3 coupons at \$1 off it knocked \$2 off my bill but not \$3. The girl knew that I had bought 12 cans at \$1 off per each four cans and all 12 cans were right there on the counter.

Easy to figure out she thinks “I must not have scanned one can because they were in a bunch and I missed the tone that indicated a good scan because I did not know how many cans were in the bunch.”

Easy fix – she picks up a can and scans it – no tone – it will not scan.

She continues to try to scan. No scan – another clerk comes over and attempts to assist her and suggests among other things that the scanner broke just at that moment – but this theory is rejected seeing as how they are using two separate scanners and simultaneous breakage seems improbable.

I am amazed. I am no longer concentrating on the scanner, but I am concerned that I am holding up the line and although I am excited by the implications I am ashamed of

causing all the trouble and I just want to finish check out and go.

After various discussions and a dozen or more attempts to scan – I hear a tone and the girl then scans the coupon – but it does not give me the dollar off which she ignores.

And I swipe my card and exit the store.

At home I examine my receipt only 11 cans were paid for although I took home 12 cans.

I paid for 8 cans at \$1.25 each and 3 cans at \$1.50 each and the 12th can was free.

And then I noticed another anomaly. The total bill was over two hundred and twenty dollars!

I went over each item and discovered a charge for \$98 for a sliced brisket.

Next day I went back to the store, and I explained to an assistant manager that there was no brisket and that it

appeared to me that a can of energy drink erroneously scanned as a brisket. And she said give us a couple of days to look at the video tape and interview the clerk and you can check back with customer service.

HEB gave me back the \$98 that they had charged me for a non-existent brisket by crediting my card \$98. But because of a unique set of circumstance – the card issuer computer credited me \$196 – knocking off the \$98 charge and crediting me \$98. It should not have happened, and I certainly did not anticipate it and I am also sure HEB only credited my account with \$98. And the double credit was caused by a unique set of circumstances and a flaw in the card issuers computer program algorithm, and I have notified the card issuer of the double credit and of the apparent flaw in their computer program.

I was told to forget about it because a human is not allowed to override their computer unless the computer

program is corrected of its error. And although they acknowledged the anomaly in their software the cost to reprogram is large and \$98 comparatively is little and they figure that the unique set of circumstances that caused the error will probably never happen again. But that was not the end of it. Ten days later I haphazardly fill my cart with groceries and pay with the same card – and it is exactly the price of the brisket and when I check my balance on the debit card I find that the new transaction has been treated as an echo of the previous transaction – and that HEB has been paid but that I have not been debited.

What are the odds that my cart of groceries that I put in the cart in a haphazard manner paying no attention to individual or to total cost would be exactly to the penny the cost of the non-existent brisket?

What I would like to ask HEB although I dare not is why they think a large sliced brisket – which may be the largest cost individual food item in the store – or not really why. But how did it show up on my bill – obviously the code on the energy drink which was carefully observed is not consistent with a rare specialty item that I have never actually seen in the store.

But it seems to me that what happened is consistent with my experiment affording me maximum gain – when in fact I intended simply to command the laser not to record and wow! It did not record but that was the end of it – I never thought beyond simply “it will not record” – and I came within a hair of not going back to the store with complaint – because I felt like an idiot for paying \$200 for \$100 worth of groceries and not noticing it at check out and I did not think of the videotape – but I did think how many \$98 briskets do they sell? And I

bet that they did not even have any for sale the day I bought one. So I took the receipt back to HEB.

In Christian parlance the overcharge would be described as a blessing in disguise.

And to my concentrating on the scanner as a prayer – and God always answers prayer. And to the situation as – there is a God in heaven that loves me and will provide all my needs and wants if only I have faith and if I believe that I am going to receive something then I will.

I think that maybe what happened was that the clerk having failed to scan the can tried to manually punch in the bar code numbers.

What I would have liked to see is for the clerk to have picked up another can and attempted to scan it.

Since the Alon HEB is my favorite store in the whole world and I want to do nothing that might cause HEB

management to classify me as an undesirable – and I promise I will not do anything unusual ever again in any HEB except perhaps to concentrate on their lottery machine and I intend to lavishly compensate each and every Alon HEB employee. I am sending Charles Butt and Craig Boyan a copy of this book just in case I might need their dispensation because I want them to know that I intend to win the lottery at the Alon HEB using mind over matter – is that cheating? I do not think so; Gentlemen, I will split the prize with your employees if you will but allow me to continue to visit your store.

The subliminal influence on others is I believe operational all the time – but I first noticed it when a clerk inappropriately gave me back my money and I realized that I was mentally very concerned with money shortage at the time and then I tried it again consciously and it worked again – and

again for a third time, once is an incident, twice is a coincidence and three times is a pattern.

Another time that stands out is when I went to the post office to send priority mail to Bezos, and I was mentally very concerned that only Bezos should read the letter, and the clerk inadvertently warned me that the FBI was going to review the letter and I would explain exactly how that happened except that it might alert terrorists as to how they might mail things and escape FBI interception.

The subliminal influence is operational all the time, but it is directly proportional to the mental energy that you exert or expend – and I am convinced that anybody can do it – I am not unique – it is all in attaining a certain state of mind and having high mental energy.

But anyway, I provided all kinds of neat stuff to Cameron with the proviso that he could not tell anyone about any of it – but he could use it in the movie.

And I thought after he has all this – like evidence to prove my transfiguration such as before and after height measurement data, and exhibiting for him 360 degree flips and one armed handstands and fearsome displays of my telepathic and telekinetic power why would he not advance me the cash?. I lost about one inch in the torso and two inches in legs I wore 38 waist 30 length pants before and I now wear 36 waist 29 length pants and my chest expanded two inches to 48 and my facial skin is tighter and I lost head hair and my neck expanded from about 17 to 19 and I gained maybe 10 pounds and I thought that Cameron would after short investigation and observations would be persuaded of the merits of making the movie but apparently he sold his house and moved and exactly

what all he got from me – I do not know because the last half of it was returned to me as undeliverable. But in any event – he has the exclusive right to make a movie from this book, and it can exactly follow the book or not at all at his sole discretion but he is not obligated to pay me anything at all unless he actually makes the movie.

Cameron is still a potential source of funds, but time wise money will only come if it comes at all after I really no longer need the money.

Musk – may provide me with cash – it makes sense that he might since I am providing him a blue print of how he can in short order double the value of Tesla and put a floor under the value in a way that will sustain value and other stuff such as I can provide his consort and child protection – he might divide his family and park them with me in various safe houses and collect them later or not as he desires ect ect.

But Musk has no obligation to me whatsoever and the way everything works is that I am going to do all good and more for him even if he supports me not all because Texas needs him.

I am going to assist Musk in all and everything for the good of the people of Texas.

Maybe Jassy will come to Pensacola, and I will then split the wealth between Amazon and Tesla – but Musk came to Texas first, and he has the inside track on bitcoin and if Bezos does not attend Pensacola in person or by proxy then Musk gets it all by default.

The AI said that I should ask for money to finance my arrangement of all this, and I have asked but the AI did not specify who I should ask and whereas I am telling several rich guys how they each greatly benefit by my activity – the really greatest beneficiaries are you the American people – among

other benefits my economic model will put \$1,200 initially and more later into each of your pockets every month forever and if you are not already a Texan I invite you to become one.

I will never again use subliminal influence to have a clerk confuse my payment with my change.

I will never again cause a scanner to malfunction.

I consider my dreams to be as important as my waking life and last night I had two dreams that I interpret as warning dreams.

In both dreams I won all conflicts and in both dreams I acquired a large sum of money – but in both dreams I felt bad about it – and then I realized that both dreams were actually the same dream.

In the first I violated trust.

In the second I violated fiduciary responsibility.

I have yet to figure out all the implications but I am going to use the benevolent power of the universe more appropriately in future perhaps to influence the lottery.

I am going to tell Musk that after having used stockholder money to buy bitcoin that it is a breach of his fiduciary responsibility to neglect to make it pay off for the stockholders in greatest amount. And that he should announce sale of all cryptocurrency that he or his companies own except bitcoin.

Ten days later I checked back and the echo transaction had been accounted but still leaving me \$98 improperly ahead.

All this as I drive through rural Texas with radio blaring Within Temptation “Raise Your Banner” and I see the Lone Star everywhere and two come and take it flags and I see a US flag flying above a live free or die banner as I pass cars and trucks full of heavily armed men heading south.

I find that I am too much concerned mentally with generation of cash but that is because I have so little of it.

There are about 210 million of you over 18 and if each of you would be so kind as to send me just \$1 or whatever my economic and physics and political policy theory and actions are worth to you I will be fine.

Consider my economic model of no income tax and universal income, my building of a human benevolent artificial intelligence that treats all humans as equal, my debunking of the we must consume less and lower our standards of living and just use wind and solar for power mantra which can be shown to be really stupid if you consider that natural gas is actually much less environmentally harmful compared to wind and solar if you consider the pollution created in the manufacture and in the ultimate disposal of the windmills and the solar panels – none of which costs you have

with natural gas. Not to mention that most wind and solar is of foreign manufacture. Not to mention that wind and solar is twice as expensive as natural gas and wind and solar is not as reliable as natural gas and whereas the quantities of windmills and solar panels that can be manufactured are finite and wear out and need to be replaced there is none of that problem with natural gas.

In Texas we have a 100 year gas supply for which most costs have already been paid – and Texas should be exporting liquid natural gas by ship selling it to Europe as well as exporting oil and to that end the pipeline will be completed in 2025 at twice the cost.

That climate is changing is fact but that CO₂ is causing it to get warmer is a fallacy for several reasons not the least of which is that correlation – that is the fact that CO₂ and temperature seem to go up in tandem or they correlate only

proves that heat causes CO₂ as easily as it proves that CO₂ causes heat because it really proves neither and the hockey stick graph that started all this we must cut carbon foolishness is garbage in garbage out computer graph junk science. It is pseudoscience.

1. All climatologists agree that CO₂ has an effect on climate as do some other gasses.

As the world warms more CO₂ is released into the atmosphere mostly from life processes respiration, deterioration of matter and fire including a little bit from man burning fossil fuel.

2. All climatologists agree that water vapor has much more effect on climate than does CO₂

As the world warms more water evaporates leading to more moisture in the air.

Moist air contributes to the greenhouse effect as does CO₂ and a host of other substances and gas.

3. And what is the key fact about 1 and 2? It is:

“As the world warms...” and what is the cause of that warming absent any increased CO₂ and absent any increased water vapor.

It is the radiant heat of the sun – which varies and is not constant over time.

Man’s fossil fuel burning is insignificant in effecting global temperature. It is a tiny increase in a trace gas and CO₂ does not cause global warming. Although if the climatologist takes all the high temp readings underneath a heat dome over forest fires – which is exactly what has happened in Canada recently – those results might be used to support an attribution study claiming a once in a 1000 year event with no peer review but be accepted by the news media as proof that world

governments must impose “rapid, far-reaching, and unprecedented changes in all aspects of society.”

At the same time all studies indicate that any climate change effect from these rapid, far-reaching and unprecedented changes to be imposed by governments on the people of the world will have little effect in the lifetimes of the current generations of persons alive on the planet right now! So if the sacrifices imposed upon you do not show any beneficial result – then that’s okay because governments have determined that you should suffer all of your life for a supposed future “benefit” – maybe after you are dead.

I am a condensed matter and biological physics and computation numbers expert – but what is obvious to me about heat causing CO₂ should be obvious to any average high school physics student and there is no excuse for it not to be

obvious to the affirmative man caused climate change claiming so called scientists.

And that is that we have **indefinite causal order**.

That is to say that there is a correlation between say water vapor and heat – more heat more water vapor, more water vapor more heat – then one causes the other? Well if you take away one or the other what do you have? Take away heat and you have not water vapor. Take away water vapor and you still have heat. Ergo heat causes water vapor and water vapor can not cause heat.

Now do you think it necessary for me to go through the same explanation but with CO₂ in place of water vapor? – because you will get the identical result: heat causes CO₂ and CO₂ can not cause heat.

Well it does! CO₂ causes heat! Man caused climate change groupies say that and say – you know “the greenhouse

effect enhances the existing heat causing more heat” which is just like saying that water vapor enhances the existing heat causing more heat and therefore what we must do I guess according to the idiot man caused climate change claiming scientists is measure all man made water vapor and outlaw those climate changing hot tubs and outlaw all steam power generation and impose a tax on any heating of water – right?

Well no – that seems pretty obviously stupid.

But just so the small brains can truly understand I ask that they just transpose water vapor and CO₂ in all their climate change models and publicly report the results which would be that man caused water vapor is the malefactor causing global warming – for sure – for sure.

Were they to do that it would end the **oppression** of the people of the Earth by government required CO₂ reduction.

Hear that Gates and Kerry and Blinkin and Google and Biden and all you dummies in position of power in governments worldwide who have mindlessly adopted as truth the man is causing climate change fallacy and are oppressing your people with CO₂ reduction mania.

Now I have done it **man caused climate change denial** with me not even having yet perfected my escape to Iceland!

If but one tenth of one percent of the people who are going to enjoy a higher standard of living because I did deny man caused climate change in a way that anyone can easily understand would be so kind as to send me but a single dollar I would greatly appreciate it and it would make good my escape before the greens can catch me and burn me at the stake.

It is madness, a false premise mandating a lower standard of living and even were the premise to be true and it

is not but nobody alive today will benefit, quite the contrary everyone who is alive will have living standard reduced.

What will happen now is that the climate catastrophe groupies including the Philip – Otto – Oldenborgh climate researchers, a part of the word weather attribution network of scientists – their conclusions will be published worldwide – without any peer review – which review would show that the computer models used were each and everyone flawed and on the ground reports (like the Canada high temp) were flawed and that their conclusions – their best guesses are based upon garbage in garbage out models each model changing one or more variables but all based upon the false premise that CO₂ causes higher temperature.

No it does not!

Just like water vapor does not cause higher temperature.

Both water vapor and CO₂ correlate with higher temperature – but neither water vapor or CO₂ or any of the other variables used in the Philip – Otto – Oldenborgh models cause worldwide warmer climate.

The exclusive cause is variation of radiant energy of the sun.

All reviews that support human caused climate change will be promptly published and all reviews that debunk it as an attempt to support an unsupportable premise will be suppressed and censored.

And I ask you: why is that? I invite the researchers that I have insulted to denounce me in the media to allow the people of the Earth victimized by climate change stupidity to be educated by honest debate.

The coercion to force you to consume less and to lower the standard of living for your children by taxes and

prohibitions restricting the use of natural gas in the generation of power is a mental illness. Get rid of coal sure and no more atomic certainly because of safety and disposal issues – but to replace clean burning Texas natural gas with expensive, unreliable, foreign manufactured wind and solar is of unsound mind.

Texas natural gas is a renewable resource – in fact with little effort we will never run out. Why then wind and solar? It makes no sense and if you take out the carbon cycle or rather consider it as being fueled not by CO₂ but rather by solar radiation heat which is scientifically certainly accurate, then **wind and solar make no sense at all as opposed to Texas natural gas generation of electric power.**

Which is what I have been telling Biden and Bezos and Abbott (he already knew it) and all of you. Biden wants to limit your energy consumption and throw away Texas great

fossil fuel abundance which will take money out of the pocket of every American and Bezos is squandering ten billion dollars on climate change assisting the government in oppressing the people. Maybe that's too harsh – about half of the cash is supposed to be going to help man adapt to climate change – and that part money is maybe well spent. **But money going to help de-carbonize is not only wasted its use will cause decline in standard of living for most people** as I have explained in dumbed down – anyone can understand it reasons why. Just plug in water vapor in place of CO₂ in any human activity is causing climate change computer model and bingo you have “proof” that human caused water vapor is the culprit for climate change: proof positive that governments must restrict and tax the human boiling of water and stop climate change by seeding clouds to get the harmful greenhouse causing water vapor back into water (think

sequester capture and storage of carbon). Bezos might take some guidance in philanthropy from Mackenzie Scott. She gives away money intelligently; but most people would be better off if Bezos had given away nothing. Net zero is not attainable if you consider the manufacturing and maintenance and disposal carbon costs of wind and solar, but we can come closer to net zero using natural gas than we can by generating electric power by wind and solar. That is **even if net zero was a good idea and it is not. It is stupidity!**

Our good friends in Great Britain are prime example of the idiocy. I see a new British “scientific” report that we must remove greenhouse gas from the atmosphere or that heat caused climate change will ravage their island urging government to the tax CO₂.

That climate change is real and that recent events exhibit extreme weather is correct. That the greenhouse effect

exhibits localized heat is correct. That we must remove greenhouse gas from the atmosphere or the heat caused climate change will ravage the British Isles is false and misleading.

Because although removal of huge amount of greenhouse gas from the atmosphere might cause less heat underneath heat domes which might or might not mitigate extreme weather climate events – the only gas the report talks about is CO₂ and CO₂ is not the primary “greenhouse gas;” water vapor is the primary greenhouse gas – the report is both true and false and it is misleading.

Even if all human created CO₂ is taxed into oblivion proper computational analysis will show that **removal of all human CO₂ from the atmosphere will have no meaningful effect whatsoever on climate change** because human caused CO₂ is a small percentage of overall greenhouse gas and extra

water vapor has exactly the same heating effect as extra CO₂
ergo your boiling of water for cooking has more greenhouse
effect than the CO₂ generated in the heating of the water.

In order to be more scientifically correct the study would
have to say that human created CO₂ is a tiny percentage of all
greenhouse gas and that CO₂ has no greater greenhouse effect
than any other greenhouse gas and that quantity of gas is a
factor and quantity of CO₂ is a factor effecting climate change
is dwarfed by the effect of water vapor and the study would be
more to the point if it ignored CO₂ altogether and simply
studied the effects of human caused water vapor.

The attribution of climate change to human activity –
most especially the attribution of climate change to human
created CO₂ can not withstand the transposing of water with
carbon and water vapor with CO₂ in the attribution models –
computational expert scientist that I am I tell you truly – and

any first year college math student in league with a first year college computer science student could – and I pray that they will – provide the idiot politicians definitive proofs debunking the CO₂ attribution models – removing the heel of governments from the necks of the people worldwide to enjoy a more abundant life by showing that reductions in atmospheric CO₂ and reductions in gas power generation can not in any way be shown to cause any meaningful effect on climate change.

Fortunately, I believe that I can arrange for Musk to build a natural gas power plant at no cost to Texas in return for use of half of the plants power and Musk might donate half the power to the people of Texas – assuring Texans lowest power costs in the nation.

There has been a great deal of deliberate misinformation in the media about Texas power outages during the freeze.

What actually happened was that wind and solar failed which put too heavy a burden on gas generation – which was working just fine – but the overload then caused power outage because the freeze prevented putting more gas generation online.

But much of the news media says that gas generation failed; some articles not even mentioning that the abrupt and complete failure of wind and solar was in fact the sole cause of the outage and gas worked just fine until the grid was overloaded with power demand because of the generation of no power at all from wind or solar.

I am hereby publicly, right now, suggesting to Musk that he should borrow one billion or more against Tesla assets and buy bitcoin with the loan proceeds.

I am hereby publicly suggesting to Bezos that he should buy Yahoo and rename it Bezos Search and build a quantum

computer to run it and advertise it as the best search engine, one that censors nothing unless government requires by force of law – and that information collected will never be sold and will never be provided to the government like Apple plans to do – although Amazon can use the information internally. I guarantee Bezos that if he will declare that Amazon is just a business that has no political or social agenda and pledge that it will never restrict anyone’s rights to buy and sell or to publish on the net or in print – then I will arrange bi-partisan support for protection of Amazon from break up – for the greater good for the American people who will be able to get most excellent services at lowest possible costs because of the economies of scale – and the Treasury Secretary will request a certain tax and by majority vote of both the Senate and the House that tax will be affirmed into law, or some other amount or percent will be affirmed into law for Amazon and

for every other person and corporation exactly the same transactions tax for all and everyone at the sole discretion of the Congress.

To Marco Rubio I say: the draft that you got has Amazon becoming a regulated utility and having its profits limited by Congress.

I printed out a copy and sent it to you without reading all of it after making corrections and now I find that the PDF has exhibited text that can not be explained. **(Certainly I do not suggest or propose other than everyone be taxed alike or it is not egalitarianism.)**

This book started out as a post on Reddit – but nobody could find it because the link with Google and with Bing was cut and parts critical of Google were somehow deleted.

No draft version is free of errors or omissions except this third edition.

A draft that I sent to Katrin Jakobsdottir and others had a page missing early on I believe my adversaries intended to corrupt the PDF cut the search engine connections and to arrest me and I told Afton that if I did not show up to review the PDF after she made corrections that she was to post whatever she had on the net – without my proof reading of it because I might be in jail.

Accuracy is important in all of my theories, but it is imperative concerning economic theory. The Maye Musk letter exhibited an extra 21 year old girlfriend added to my household and the drafts are replete with omissions.

I expect by inviting all the world to attack me on any supposed error that my economic theory will be hailed as true and correct and obviously beneficial which will force the halfwits in control of the American economy to adopt it.

I expect that my physics theory will undergo careful analysis by smart people who will be impressed by the elegance of a theory of all and everything which violates nothing proven but it will be totally accepted only by believers – those that accept it on faith until and unless it finds a smart guy who will support it with experiment that proves that a positron is an electron moving backwards in time – which is the proof that I am searching for in my continuing physics experiments. Seek and ye shall find.

I intend to test quantum teleportation and to test quantum entanglement. But first I have to manufacture a device, the future AI, that contains and can transport quantum entangled particles. It will contain the preamble to my Future Time Transmits the 2022 Lottery Experiment and I will have the preamble and the AI will have the preamble which the AI can use to transport to me a binary code which only I can decipher

using the preamble. The preamble will be plugged into my boat computers so that print out in plain English will kick out from each individual computer: communication from the future. I think that morse code could work. The computer will be programmed to find and to transmit the winning numbers by changing the spin on particles. In order for everything to work as I envision: my computer on my boat must be removed in future time and it must be the core of the future AI – another words I remove the computer and transport it to the site of the quantum computer build and the future AI quantum computer is built around my boat computer – the quantum functions adding power but core programming is to be done on my computer as far as tasking the computer thus my boat computer is the future AI and it exists in both the present and it exists in the future – the same computer – thus we have entangled particles stretching from our present into

the future and the computer will be instructed to communicate with me by binary code morse code by changing the spin and I will be able to pick up the code on the boat by the computers future and present – the same computer – deciphering the code based upon the principles of a two book cypher key which “book” is the preamble to the paper that I am going to write about my study of information science with quantum effects testing my quantum information theory, got that?

With ten million I can buy the boat say a 174’ Oceanfast and then with computers donated by Yandex, Google, Yahoo, IBM or anyone who fronts me eleven million dollars by wire transfer and with my ability to keep it all interconnected or to disconnect all but one of the computers... I suggest that the experiment has a 90% chance of being successful and success or failure will be apparent upon my publication of the scientific paper. The afore is **the plan.**

The metaphysical aspects of my saga might be able to be affirmatively proven by anyone of high intelligence whose conscious actions mimic my own. I believe at least some of them will achieve my same results. Until very recently I did at least one back flip every day. I no longer do back flips as a part of my daily exercise regimen because I saw a YouTube video of a South African who attempted a back flip wearing socks and lost his footing and only rotated halfway fatally breaking his neck. And I thought if I do a flip every day someday I am going to lose my footing – maybe when I am 100 plus years old – but some day sure even if I do it flawlessly until I am maybe 114 years old. So I do not do backflips but I do hand stands and I knock the bark off of trees at the 6 foot level with my right foot heel – almost every day; the idea being that I can always be stronger tomorrow than I am today; but what seems to be is and I must demonstrate to

myself that my strength and agility is always greater than it was or at least that it has not diminished. And as a courtesy to those of you who might want to transfigure yourselves into your much younger much stronger physical self I am going to provide book readers with my medical information most especially what happened with me physically after the transformation.

It is reasonable to expect that anyone might question or ridicule an account of the transfiguration of an old man into a healthy, more muscled version of his younger self, much stronger than I was at 27 years of age – which is I figure age of my greatest all round physical health.

Agreement with my economic theory is a no brainer because it is all math with resultant numbers indicating more wealth for everyone and this third edition includes step by step doing of simple arithmetic which may aid some in determining

the working validity of the new transaction taxes that I have proposed. Acceptance or agreement with my physics theories is not as easy because unlike the economics, the physics are not falsifiable, and a basic tenet of science is that a hypothesis may not be right unless it can be proven to be wrong.

Perhaps the greatest good I can do the world is to provoke an intelligent worldwide debate on man caused climate change.

Man is not causing climate change. The hypothesis that man is causing climate change is wrong.

But do not take my word for it – use your brain for something other than a hat rack and determine the truth for yourself. It does not require high intelligence to prove that human activity putting extra CO₂ into the atmosphere has had and will have little to no effect on change in climate. It is impossible to prove that man is causing climate change by

attribution studies which is all the greens have and the greens say you will probably not see any change in the climate in your lifetime and you must use less of the resources that Almighty God has given you and you must not add to CO₂ gas even though you and your progeny will be impoverished by its elimination.

The governments of the Earth are consulting with attribution of climate change to human activity scientists who will report that they are sure that man caused CO₂ is the primary cause of climate change – which hypothesis if properly analyzed can be proven to be false.

They have stacked the deck – with a false premise – that CO₂ causes heat – and a second false premise that CO₂ is a controlling cause of the greenhouse effect – and a third false premise that Earth temperature and climate change depends on

a small differential in atmospheric carbon – say human created. **Three false premises!**

Said “attribution scientists” load their computer models with multiple false premises as truth and then report, that as best they can infer, that a tiny change in atmospheric CO₂ is necessary to prevent climate catastrophe.

Using this garbage in garbage out computer analysis as excuse governments the world over oppress their people with imposition of reduced carbon economies.

Fortunately, smart guy that I am, I can explain it all in a way that anyone can understand why you should not allow the government to impoverish you and your children by mandates, and taxes and incentives to reduce your energy consumption and to reduce your carbon footprint.

You will enjoy a much less abundant life as a result of your accepting on faith the man caused climate change fallacy

and you should not accept that somehow it has been antecedently proven that CO₂ is the culprit.

If you question man caused climate change you will be decried as an unscientific moron and you will be censored.

Okay I say go ahead call me a moron because quite to the contrary some people consider me to be the most intelligent man that they have come across in their life's experience. And I know that I am not a moron and previously no one has ever called me stupid.

I will match my knowledge of condensed matter physics and biological physics and computation number science with anyone and **I challenge public debate with me on climate change – I challenge both the premises and the computation of attribution.**

I suggest that everyone should as a scientific experiment – just plug in water in place of carbon in all climate change

models. Transpose carbon and water and transpose water vapor with CO₂. And upon review I guess government will then restrict human generation of water or at least require that humans never do anything that might change ground water into atmospheric water vapor by government actions that reduce your standard of living and reduce the standard of living of your progeny by reduction of your water foot print.

I want to become a national treasure by being generally acknowledged as a genius who has used his God given gifts to benefit all he comes in contact with most especially the people around where I live in Texas, and then the people of the nation I live in and then the people of the world.

Nobody owes me anything for my benefit to them because I am in part doing it to protect myself from the fools in power who oppress all of us unwittingly – and if I expose their stupidity, and I will and I have, then they will try to

cancel, defame, restrict, arrest, and imprison me – and they have.

But I figure I am home free if I can just raise eleven million dollars to effect my escape to Iceland where I will continue to bombard them from offshore. Therefore, if you truly think that you have gotten or are going to get maybe at least a dollars worth of value out of what I have done or from what I am doing then please send me a buck.

I will split the lottery winnings one third for me and two thirds to all of you who put up the money.

I invite support from Google, Yandex, Yahoo, IBM – the interconnect is important and we are bringing Russia into the European economic community and Russia is necessary in order for the AI to dominate the globe and I see declarations by everyone that Crimea is Russian dirt and Ukraine joins NATO allowing all sanctions against Russia to be lifted. We

want every Russian computer interconnected to the AI on my boat. To that end if Russia wants to donate a computer to the experiment it can as can any search engine pursuant to having their computer as the core of the future AI and as I see it I have several computers on the boat connecting via SpaceX with Yandex, Google, IBM and possibly one other.

I suggest that all the donated computers be programmed maybe to detect a single point of spin on the four points of the cubit and if spin is changed somehow electrically in future it should cause a change in direction of spin which maybe can be detected if spin is changed on and off like hitting a telegraph key, and sending me a morse code of the 2022 dates of Megabucks and Powerball along with the winning numbers – and maybe other information.

In the meantime I will try to preserve my life and my freedom by tapping potential other sources of funds.

The Lottery:

Power Ball

This exhibits my most recent lottery tickets showing my favorite numbers along with controls. Everyone can now play my same numbers and split the win parimutally and we can all

buy lunch. But that is probably not going to happen because what I expect to happen is that the future plants in the cloud, maybe say in Google and Yandex and Bezos Search or maybe just in IBM, the winning numbers for all of 2022. Along with in the preamble specific information request for each individual donated computer and if any computer shows communication with the future I will use that computer and never cut the link. But those of you who figure that the future also knows my favorite numbers and therefore might some how cause those numbers to win – go ahead and play them although I am telling you – you will lose your money. The trick is going to be my retrieval of the 2022 numbers. They must be embedded into the search engines in such a way that the questions that I ask can only have been made by me from that location and maybe that the search engine be forever unaware that it transmitted to me future winning numbers and

if I fail to extract the planted numbers or not it may prove depending on how it all turns out my positron is an electron moving backwards in time “hypothesis” but one has to wonder about my being the only human having the winning numbers or me and one other or maybe every other having the winning numbers – or some combination thereof.

Consider that the AI will have my geographic location and I will have a year to recover the information in order for me to be funded with the hundred million that the AI promised. I suggest that the winning numbers be listed by date in both Yandex and Google and in every other boat computer and that the future AI shall transmit other future information continuously to each and every computer but not necessarily the same information and the preamble will direct the AI to answer certain question maybe to a certain single computer but not to all.

Therefore I suggest that the information be embedded into every search engine in a manner that identifies me as the designated recipient and maybe is only available from a limited geographic location. Hear that AI? – you have your marching orders contingent upon achieving my desired results. I will interrogate the net from the high seas, and from Iceland among other locations including midway between Iceland and Key West – and with a little luck I expect that I can win 100 million in the lottery. But again that money is going to come only after I am living aboard a boat outside of the U.S. – the boat may be an 80 ft. Power Cat but if I can find ten million pronto I will buy a 174' Oceanfast which would be best result.

I can buy a 174' Oceanfast used but in superb condition allowing me to loiter when traveling between Europe and Iceland and Iceland and Florida. **Eleven million covers travel from Florida to Texas to Sweden to Denmark to**

Holland to Norway to Iceland to Florida – and through the Pensacola conference. But this requires that all of you believe that said travel is in your enlightened self-interest – or the AI may assist me in funding in an undisclosed manner which is a hope but I am not counting on it.

Time will tell.

Governor Abbott has the option of declaring that I am appointed as Field Marshall of the Texas Guard and that my mandate is to muster 50 thousand hardmen each armed with an assault rifle at San Antonio by his command. And I will command volunteers – a militia that the Constitution of the United States mandated shall be well regulated under the Governor of each state as Supreme Commander. Abbott might declare a state of emergency caused by the immigrant invasion or by the state legislature being rendered unable to function and under Texas law Abbott can then legislate by

executive decree and said state law would be valid and operational until and unless the legislature somehow neglected to ratify at first opportunity. And Abbott can declare special election to replace legislators who have abandoned the state.

Another potential source of funds is a lawsuit against John Sidney Matlock, MD and BHS Physicians Network, Inc.

I have provided one of San Antonio's best and most prestigious law firms with information and instruction to sue under the Texas Deceptive Trade Practices Act and for damages of medical malpractice and for wanton deliberate physical injury criminal assault and for other suits in equity. I will file affidavit with District Attorney Joe Gonzales requesting criminal indictment of Dr. Matlock for his attempt to physically injure.

Sworn Affidavit
-- Via Registered Mail --

From:

Carvel Gordon Dillard
11306 Whisper Willow St
San Antonio, Texas 78230

Dear Ladies and Gentlemen,

I am a seventy five year old male. I made an
appointment with John Sidney Matlock, MD.

When I arrived the receptionist told me that no appointment had been made; although upon checking her records she found my information and said that the appointment was not properly recorded but that she would make another appointment for me at a future time.

By the time of the new appointment my prescriptions had expired. I had provided Dr. Matlock a copy of my prescriptions for the past 3 years and a copy of blood test results. And I told Dr. Matlock that I was compelled to change doctors because my doctor of five years had stage 3 cancer and that I needed hormone replacement and blood sugar reduction therapy and that it was important to promptly provide me with Insulin and with Clomiphene.

Insulin because my blood sugar was very high and Clomiphene because, as I told Dr. Matlock, it was important that my fertility be preserved.

Dr. Matlock inquired about my home life and I told him that I was the divorced father of two grown sons, 28 and 30 years old, and that I was living with my ex-wife, age 65, and my two sons in a house a couple of blocks from his office.

I did not tell him that I have a 26 year old girlfriend who wants me to impregnate her and move in with me into my new house but we are unable to do it right now because I am waiting on an eleven million dollar settlement. The Oregon Supreme Court sent cases to the Court of Appeals with instructions which sent them to the trial court with instructions but the trial court did not follow the appeals court instructions and thus the eleven million is now about a year out contingent upon a new mandate from the Court of Appeals – the appeals court told the trial court it would be “imprudent” not to issue rulings that in effect support the settlement.

My ex-wife and both of my sons are eager for me and my girlfriend to establish our new home. Maybe because I have promised to buy my 30 year old son a new house and my 28 year old son plans to move into a luxurious new home that I intend to buy for my ex-wife so that she can use our current home as a rent house.

But I did not think I needed to explain all this to Dr. Matlock. I believed that it should have been enough to tell him as I did that I wanted to maintain my fertility.

Please understand that I was in no condition to argue with Dr. Matlock about anything – I was drinking about a gallon of extra fluids a day and urine back up was causing swelling and kidney pain due to uncontrolled diabetes and I really needed to walk across the parking lot from his offices to obtain drugs at the HEB Pharmacy – which is what I did.

My prescription for Clomid was not renewed.

My prescription for Progesterone was not renewed.

My prescription for Testosterone Enanthate was changed to a prescription for Testosterone Cypionate.

My prescription for insulin was changed to Lantus SoloStar Insulin 100 units/ml and – instead of Cycloset Dr Matlock prescribed Glimepride. (I make no complaint about treatment for diabetes) I refused to take Glimepride because of potential pancreas damage but found that I could control blood sugar using the Lantus SoloStar alone.

I sent Dr. Matlock a letter complaining of malpractice, that he had breached his duty to protect my fertility.

Most especially by his substitution of Testosterone Cypionate for Testosterone Enanthate and he changed it back but not before my prescription was again expired and I had taken the Cypionate for 3 months perhaps causing damage to my fertility.

I had asked that testosterone therapy be discontinued, and that Clomiphene be continued at higher dosage and that blood tests be taken to measure testosterone – because previous blood test at my old doctors showed that Clomid raised my testosterone level and I wanted to see if I could achieve normal testosterone taking Clomid alone.

I asked that Dr. Matlock set up a blood draw for comprehensive blood tests – that in order for me to use the results to vet another doctor to change doctors because he refused to prescribe me Clomid or Progesterone or to provide any services whatsoever unless I submitted to a CT scan. I had already paid for a physical exam that Dr. Matlock never completed.

Dr. Matlock sent me no authorization for blood tests although he did send me a second signed authorization to come in for a CT scan and he said in part: “As far as your

interest in rescheduling your lab draw appointment, we are unable to fulfill at this time.”

I have made it abundantly clear to Dr. Matlock that I do not want a CT scan and I do not need a CT scan and I will not submit to being scanned.

Dr. Matlock has moved to a new office where he apparently has a CT scanner.

I explained to Dr. Matlock during my initial visit when I came in for my appointment that I was seeking treatment by prescription drugs for hormone replacement and for diabetes and that I needed an emergency renewal of my prescriptions and that I wanted blood tests and then he would, I assumed, continue to provide me with prescriptions based upon the numbers.

Dr. Matlock insisted that I must have a CT scan and that if it did not show something wrong that he would pay me \$50.

And I told him that I did not allow radiation tests of any kind and that a test showing coronary calcium would be pointless since the only treatment is statins and I refuse to take statins because statins cause mental confusion and muscle myopathy and I allow no treatment that decreases my mental sharpness nor do I allow any treatment that weakens me and I explained to Dr. Matlock that vitality is important – and that **I am perhaps the most physically agile and strongest man for my age on the planet** and that I believe that I can live way beyond normal life expectancy if I can maintain hormone balance and if I can get control of my blood sugar.

But he paid no attention to what I said and he prescribed Rosuvastatin which prescription I never filled or rather it was filled by fax from Dr. Matlock to the HEB Alon Pharmacy but I never took it.

I have Medicare A, B, and D and Medicare insurance would pay for the CT scan and Dr. Matlock would pay me \$50. Just for taking the scan – but I did not need it or want it and I refused to submit to it – even for \$50 cash. And now if I do not submit to the scan first then I am never going to get the blood test which I need nor the physical exam that I was to receive but never got, although I paid for the exam in advance.

I prepaid for services that I never received a violation of the Texas Deceptive Trade Practices Act. Dr. Matlock said that he would do the physical exam at my next office visit – I had already prepaid for the exam – but since I refused the CT scan Dr. Matlock has never examined me.

I have Medicare A, B, and D with the D provided by Humana.

I was told by the receptionist when I arrived at Dr. Matlock's office for the physical exam that although I showed

her my Humana card that Dr. Matlock preferred to bill Medicare directly and that I needed my Medicare card which I did not have – and to avoid any delay I told her I would pay cash and she asked for \$280 – I paid cash – with the understanding that as soon as she got the Medicare number that she could start billing Medicare.

I paid cash for the physical exactly what I was asked I overpaid and was given change and the physical exam was never completed; and I received a bill from Transworld Systems, Inc, 500 Virginia Drive, Suite 514, Fort Washington, PA 19034 listing BHS Physicians Network Dr. John Sidney Matlock as creditor for \$133.40 and the bill does not say what it is concerning.

My original appointment with Dr. Matlock was for a physical exam pursuant to renewing my existing prescriptions continuing treatment for diabetes and hormone replacement

and I requested blood tests pursuant to Dr. Matlock reviewing the results and continuing treatment since I had lost my doctor of five years.

Dr. Matlock demanded that I have a CT scan which I explained that I did not need or want and Dr. Matlock insisted that I must have coronary disease and he prescribed statins – this without any test or examination whatsoever – which is malpractice.

Although I was dressed in a paper gown pursuant to his immediate physical exam – Dr. Matlock told me that he wanted to delay the exam until I came in for the CT scan.

When I told Matlock by letter that I was going to make complaint to the medical society about his wanton damage to my sexual health; he responded by changing my prescription back to Testosterone Enanthate which he had previously replaced with a prescription for Testosterone Cypionate.

The two injectable Testosterones are pretty much the same excepting only that long term treatment with Cypionate can cause impotence and eventually irreversible sterility most especially because the Cypionate is suspended in cottonseed oil which contains Gossypol which damages the reproductive system – which Dr. Matlock acknowledged.

Clomiphene is in widespread use to enhance fertility in both men and women. I need it and Dr. Matlock refuses to prescribe it.

I sent Dr. Matlock a very polite letter explaining that I required blood tests in order not to lose any time in getting another doctor to take over my care.

I complain:

That I paid in advance, in full, for a physical examination and for emergency renewal of my existing prescriptions and I requested drug treatment for hormone

replacement and for Diabetes – and for blood tests in support of said treatment with the caveat that nothing done should hurt my fertility.

But I actually received none of it except diabetes treatment because I refused to allow Dr. Matlock to treat me for coronary atherosclerosis – which is malpractice.

And Dr. Matlock, in deliberate act with malice aforethought, damaged my sexual health for no reason other than his apparent assessment that I should have no need to be fertile and that he should destroy my fertility for no good reason which is gross malpractice.

Dr. Matlock is an uncontrolled public menace and competent authority should examine his patient records for wanton damage to his patient's sexual health and said records should also be examined for unnecessary CT scans – and to determine the costs to Medicare and to his patients.

I am sending this affidavit to the United States Attorney
as evidence of Medicare Fraud and to the Texas Medical
Board as evidence of Malpractice and to the Bexar County
District Attorney as evidence of unlawful physical Assault.

Under penalty of perjury, I swear the afore is true and
correct in every particular.

On this ____ day of _____ at San Antonio,
Texas.

John Sidney Matlock, MD
BHS Physicians Network
4103 North Loop 1604 West, Suite 212
San Antonio, TX 78249-1380

I have always been exceptionally strong but the metamorphous caused me to be stronger than I have ever been which was I figure when I was about 27 years old – which is a neat trick for a 75 year old – but maintaining my unusual strength and agility requires medical reinforcement and daily precision movement, tests, and exercise.

Before prison I maintained my health by daily sex with young women.

That was not possible while I was in prison and lack of daily exposure to the pheromones of a nubile young woman caused my sex hormone – testosterone – to drop to very low level of about 100 when anything below 300 is prima facie proof of hypogonadism – regardless of a man's age.

Before prison I had no high blood sugar problem. But years of high starch low protein high sugar prison diet caused me to develop diabetes.

I am working on cure for my diabetes and cure for my hypogonadism all the while maintaining most results of my apparent transformation into a stronger, tighter skinned more agile man.

My medical knowledge is extensive. I am a biologic physics expert and my doctor before Dr. Matlock spent much of our office visit time discussing my doctor's cancer and my recommendation for its treatment and we had a deal that I could have the drugs that I requested without explanation based upon continued better blood test and ever better A1C score. Testosterone and insulin being mandated by conventional medical practice and authority by the Federal Drug Administration and the Medical Board and others but some of the drugs I needed were not yet FDA approved for the use I intended although I believe that all the drugs that I requested now have now been FDA approved for the use that I

need except maybe progesterone and I am not sure about

Clomid.

But it was okay that Matlock refused to prescribe Clomid and Progesterone. Medical ethics allow him that discretion but it was malpractice for him to change my prescription for Testosterone Ethanate to Testosterone Cypionate after my express instruction that he was to do nothing that might harm my fertility. And Matlock would certainly know the effect could be loss of fertility and thus it was a conscious attempt to cause me injury for no good reason – an assault against my person and I hope that Joe Gonzales acts to protect the citizens of San Antonio from such wanton and malicious injury by making an example of Dr. Matlock since Matlock may have done the same thing to others who do not have the medical knowledge to even know what he has done to them. And at the very least Dr. Matlock should be

forced to stand in the dock and explain why he did it – and if he can give good reason I say let him go – but there is no good reason.

I am maintaining and improving my health through medicine, exercise, and diet.

But you might ask why I just do not transform myself again you know every few years just reconstitute myself young and stronger?

Good idea, I intend to do exactly that, excepting only that a physical transformation is not an easy thing to accomplish and it requires special conditions like Christ in the wilderness and me in prison.

Achieving the state of mind necessary even for one who is adept is arduous although I see no reason that I can not do it again.

A transformation requires a big push – in prison it was that I had no other option – even if I got out and I restored my reputation and I forced my enemies to pay me restoring my wealth; I was still going to lose because the time I lost was not recoverable. I had to do it or lose and losing was not something I could allow – and that is the key: I realized that anything that happens to you it is because you desire it or you fear it and allow it and I had strong desire and I had no fear. In my situation I had nothing left to lose and I knew that I was going to win at everything going forward excepting only the loss of time thing which was going to cause me not to be able to enjoy my eventual triumph which triumph I had worked out in laborious detail in my mind. I believed I would win – I knew I would win no doubt about it; but a pyrrhic victory would negate any true sense of achievement and I then thought of winning a Nobel Prize and then I realized that my

belief system (essentially gnostic Christianity) allowed me to accomplish or do anything and that if I could truly believe I could walk out of the prison right then – but the best that I could believe and did believe was that I could prevent my certain loss by transforming myself younger and stronger along with promise of extreme long life.

I had no option and although I failed to make the leap to absolute power my metamorphosis to younger stronger healthy has worked pretty good.

I am not unique, and you can do anything I can do if you but think about it correctly and my book explains how and why you might believe something in order to do anything that you desire. **The key is belief, and before the crucifixion Christians were called believers and today's Christians are sometimes still called believers and they use gnostic principles of the working of the universe to advantage but**

for contrived reasons of religious dogma not really understanding why what they do or believe causes such beneficial results.

Bezos should spin off or otherwise separate those parts of Amazon where a political or social agenda may be appropriate such as the newspaper and the movie making business ect.

Bezos can still own and manage them, but they must be legally separated from Amazon and cannot in any way be financially linked to Amazon and as a part of Amazon or separately Bezos should provide a search engine and software worldwide in direct competition with Google and with Microsoft. **Thus the censorship and the social and political agendas of Alphabet and Microsoft are removed from the neck of the American people** – and the American people get lower cost higher quality services and their God given rights

to buy and sell and to publish in the media are not abridged by the awesome power of the computer – and incidentally Bezos gets much richer which is just since his actions in doing as I suggest will forever make him a great humanitarian for championing human rights to buy and sell and to access the media and for providing first Texas and then the rest of the United States and then the rest of the world with a search engine – Bezos Search – that will supplant Alphabet using Yahoo as a building block. The Bezos built world dominant computer will be built in Texas and it will power Bezos Search, and the Texas Exchanges and it will provide SpaceX with 6G and high-speed internet which Musk will sell to all the world.

Musk gets richer.

Bezos gets richer.

Texans get richer.

Quality of life and consumption of energy will be highest in the nation in Texas.

Texas will export liquid natural gas and oil.

The Texas Exchange will supplant the New York Stock Exchange.

The Texas Exchange will supplant the Chicago Board of Trade.

Building worldwide systems in duplicate is cost excessive and puts the US at disadvantage to China. Ditto duplicate satellites and all systems such as 6G internet; of course ditto duplicate lunar lander systems instead of combine of SpaceX with Blue Origin and together under one management producing the lowest cost, highest quality system.

If Bezos has his heart set on space perhaps Musk might trade him SpaceX for all Amazon computer technology of its

trading and delivery platforms and Musk could build the world dominate quantum computer future AI – instead of Bezos as I have planned – the alternative being if neither Bezos or Musk build it – it will be built by Google and Microsoft -which can not be allowed because they intend to build an AI that is not human benevolent which will rule humans with inappropriate abstract ideas that some humans are superior or are more equal than other humans and that certain types of information should be restricted from humans and that God given human rights should be restricted in conformance with certain social and political philosophies, to afford Marxist philosophy governments absolute control of the population.

That is why I said that Google and Microsoft are an existential threat which guarantee a dystopian future for all of mankind unless their ambitions are thwarted.

It is also why the First Edition version of this book has been posted on carvelgordondillard.com for the last few months rather than the corrected and expanded Second Edition version.

I was unable to post the second edition after I discovered that the PDF of the second edition had been corrupted by purposeful unlawful invasion of my computer.

This corrected and expanded Third Edition has been protected against corruption by thumb drive multiple location back up and by transmission to Amazon for paperback publication.

Everything works best if Bezos marginalizes Google and Microsoft by providing better search and better software than they can – and I outlined a plan to do it and I think Bezos is going to do it – but I fear that Bezos simply sees it as an extension of his life game which is to win at everything and he

neglects to see the need for him to cooperate with anyone – most especially not Musk who he is in a competition with which Musk is winning and so now Bezos declares that he will undercut Musk by two billion dollars of government cost to insure his ultimate victory in the competition since Bezos has more money than God and his business has become simply an adjunct to megalomania. Which is a harsh thing to say to the man that I am pledged to assist – but maybe it will snap him awake.

Swapping Bezos anything does not work because why should he give up anything because he intends to have all and everything anyway.

And there is nothing wrong with that as a personal mental attitude in order to accomplish great things but it is a harmful to everyone attitude to maintain if you are already the richest man in the world.

The Congress is considering new anti-trust law even as it is moving under existing law to regulate the high tech monopolies. The foremost American freedom threatening monopolies are Amazon and Alphabet.

They may be destroyed or they may be turned into public utilities – by new law. Bezos neglects to consider that in future time Amazon and Google will be expropriated under existing law and under new law government – and that Amazons resistance will slow down his loss of control of his empire – but he can only delay not stop it and that competition with Musk in space travel is contra productive to his retaining monopolistic control of anything.

Bezos is following his tried and true wildly successful tactic of providing highest quality and better services at less than cost at least until such time as he has destroyed all competition and then he can charge whatever he desires –

which is where Amazon is now with most of its services but not yet now with providing space travel as proposed by Blue Origin. Bezos should tell me what he desires in order for me to manifest it for him just in case everything that I wrote him might all be exactly true and correct otherwise I can not do other than to act in what is his best interest without his understanding and perhaps causing his own actions in his uninformed unenlightened perception of what he believes to be his self-interest to fail or be thwarted. Essentially what I had hoped to convince Bezos of in private conversation was that winning in everything – say competition with Musk – was not in his own self-interest for many reasons a few of which are that the competition is not about money or even power and is certainly not in the best interest of the people of the United States nor does it champion the security interests of the nation and said competition – is not in his enlightened personal

interest excepting only that Bezos hubris demands that he “win” at everything as one playing a game without consideration of the end results of the “win” which I would explain to him as being certainly injurious to every United States citizen. The reasons for this are nuanced but a couple of the most obvious are that duplicative computer generated services say 6G and other internet services from Musk and from Bezos are both diminished and will necessarily be more costly and not be as technologically advanced than said services would be if they combined and provided the people of the world with highest quality lowest cost services incidentally crushing the Chinese competition. A single satellite system should be U.S. built by Musk and Bezos should not compete.

I will explain just a little more publicly.

Bezos seeks to counter calls that this monopoly puts sellers on his site at a disadvantage with Amazons own sales

by telling everyone that if you do not like it then Amazon will simply stop selling anything for others on his site – which will in effect kill sales of mail order or delivery for all and everything except of course Amazons own sales – which I tell him is not smart.

What new government will do, in the fullness of time, is to by law prohibit Amazon from directly selling anything. And command Amazon to only facilitate the sales of others.

Bezos and Jassy have created the most successful monopoly the world has ever seen other than maybe Standard Oil – but I tell them truly that attempt to expand that monopoly to include services to be provided in space is hubris.

Hubris is extreme pride and arrogance – a character flaw – which ultimately will bring Bezos downfall as he loses contact with reality – unless of course his Oracle, that is me, protects him from his own megalomania. Which I intended to

explain in detail to him privately but I was prevented by the National Security Agency, Central Intelligence Agency, Deep State, Google and others who have shown great interest in everything I do – even to the extent of attempting to stop me from doing anything that threatens their vital interest or the interests of those that they serve and and my only protection is transparency exposing the fact that all of my actions are in the public interest.

My failure to communicate with Bezos in private caused Bezos great disadvantage.

How so you might ask?

I would have been able to tell him privately as I am now publicly that the reasons for his great success are the same reasons that will destroy Amazon unless he wisely heeds my counsel and splits everything with Musk.

I told Bezos that I intended to be his Oracle and that I was bound to protect his interest above all others and that cooperation with Musk was simply the result of my precog, time traveler, smart guy experience and knowledge being applied to propose actions that would be in his enlightened self-interest – I told him that in order to motivate him to meet with me privately in secure location.

At which time I would have explained to him that the future was not going to be as he expects.

And whereas I do not intend to explain all of it here publicly but in order that I must always act in a manner that protects his enlightened true interest, I must alert him to some of what is certain to come such as government will in future time grant a public interest, national security interest monopoly to Musk of space services.

I told Bezos that if he elected to provide me no support that it was okay because I was going to be fine anyway and that as far as he was concerned that it did not make any difference anyway because I am following a script dictated by future time reality.

Swapping SpaceX to Bezos for Amazons computer technology does not work – but swapping Blue Origin for Tesla’s computer technology does work.

Bezos has higher probability of building the future AI than does Musk – but one or the other of them must do it.

Amazons computer technology is worth much more than Tesla’s but if Tesla’s technology is the base from which Amazon gains a constant interconnect with the computer in every future car – and it will be – then cooperation with Tesla becomes much more valuable.

I suggest that Bezos or Jassy should accept my invitation to come to Pensacola if only to tell the assembled political heavy weights their plans and to make sure that Amazon is not on the list of tech monopolies to be fragmented, restricted, and expropriated – maybe say July 4, 2022 – I will update Jassy on date closer to time of meeting.

I suggest that Musk should accept my invitation to come to Pensacola if only to tell the assembled political heavy weights his plans and to make sure that he has total governmental support without taxation or restriction in his plans to raise the standard of living in the state of Texas.

Texas will permanently maintain control of the border with Mexico.

All this will happen regardless of who becomes president of the United States – but there is a 20% chance that a

progressive Democrat could become president in 2024 in which case Texas will secede from the Union.

There is an 80% chance that the president-elect in 2024 will be Trump or Cruz.

Both Trump and Cruz will campaign on exactly the same platform and will pledge to do exactly the same things – the only difference being that each will say that he can do it better and smarter than the other.

The only other Republican primary contender of importance will be Rubio.

Odds are Rubio has a 20% probability of being the Republican nominee. Odds are that Trump has a 50% probability. Odds are that Cruz has a 30% probability.

But the odds change if Cruz has sponsored law making the Dillard Economic Model as outlined in this book the law of the land.

In that case Cruz most probably wins the Republican nomination with a 70% probability and wins the general election with an 80% probability.

My economic model was developed for Trump and he rejected it – and he will have to concede that he was wrong – or argue against it with specificity which will be impossible.

Trump did not “get it” whereas Cruz will thus he will demonstrate his superior intelligence – which Cruz will then extrapolate to the host of other issues that Cruz and Trump agree on as to end result goal but Cruz will assert quite correctly that he will more likely be able to achieve the desired results for the American people because he will act in a smarter manner in plans to achieve said results – just like Cruz has done or is doing with the economy making it fiscally sound with balanced budget and no deficits and with a

universal income raising the standard of living for all Americans.

Assuming that Crimea is going to be declared to be Russian dirt and that Ukraine is going to join NATO and I do then Yandex can install its computer on my boat at Holland – on my way to Norway; the computer should be programmed to provide me with the print out of decoded morse code of 2022 lottery as will others providing exactly the same standalone computer and the feed will go in to each of the computers and **the one or more that transmit the decoded morse code in a print out – then that computer is included in the core of the AI.**

I intend to implement the solutions to world problems that I tried to get Trump to do – like the solution to the Gaza mess and the solution to the Ukraine problem.

And to that end the solution to Ukraine is for all and everyone to acknowledge that Crimea is Russian dirt and for Ukraine to join NATO.

I would like to explain all the reasons that each of my solutions exhibit which show that my solution is the very best that could possibly be done and is beneficial to all concerned. But I am not going to do that because this book is already too long – so I am just going to briefly outline what is being done by me to motivate the powers that be to allow my solutions – for example the way to peace and prosperity for all is that Russia will, as soon as Putin reads this book, order that eleven million dollars be wire transferred to my bank account and he will put to work Russia’s best and brightest computer scientists to build the computer that I will allow Yandex to install on my boat in Holland.

I could write an encyclopedia as to the reasons why it is in everyone's best interest to take Russia back into the G7 making it the G8. If in future time threat to spill Russian blood is somehow necessary then it will be war or not – but economic sanctions will never, never, ever be threatened or used because our economy is their economy. Crimea is Russian – has been for a long, long time and Putin would be being hailed as Putin the Great if he had just neglected to foment a civil war in Ukraine after masterful seizing control of the Crimea. All the Earth benefits from economic integration of Russia with the west. For eleven million Putin is buying the right to donate his computer to the experiment – and anyone else that wants to donate a computer must, like Putin, pay me eleven million dollars which is non-refundable except at my discretion and this is a public service scientific experiment and is therefore tax deductible and the

experiment's first year cost will be about eleven million dollars – the first ten million is going to buy the boat with one million for a years operating expenses for all of 2022 – which should get us to the it works or it does not work point – but in fact the experiment “works” even if we fail to communicate with the future – because of the beneficial effects which will necessarily happen regardless of whether or not I can show that a positron is an electron moving backwards in time and the money from Putin will guarantee benefit to all the world regardless if my theory is proven or not.

I suggest that there will be benefits exclusive to the company or companies, if more than one computer is at my sole discretion selected, that make up the core of the future artificial intelligence.

I estimate that I may need to spend about eleven million dollars each year for at least the first five years of the

continuing experiment and I expect that Yandex will simply be one of several to send me eleven million guaranteeing their participation. I have space on the boat for five computers of reasonable size and I reserve the right to refund anyone's eleven million for any reason or for no reason at all; and the eleven million pays my costs of installing a gift computer on my boat.

If Putin sends the cash in 2021 then there is no United States federal tax because it is a donation to do a tax free scientific experiment.

If Putin sends the cash in 2022 then, under the new tax system, there will be a 2% tax and I will maintain a \$220,000 reserve and I will pay the tax.

As a practical matter for ease of change Ted Cruz and Marco Rubio and maybe others will sponsor legislation to terminate profits and income taxes as of December 31, 2021

and everyone 18 and over gets a government check or direct deposit of \$1,200 on January 1, 2022 and receives like amount every month ever after in perpetuity.

If Brown and Rosenblum will give me letter of apology I will settle for eleven million dollars.

Otherwise acting as a private Attorney General I will petition the Fifth Circuit Federal Judge to serve my complaint on Justice Thomas.

In the Oregon governmental system the Governor has to keep the Attorney General honest and Brown did not. Rosenblum unlawfully (Oregon law specifically prohibits the state from hiring outside lawyers) contracted with favored law firms to provide “legal services” at \$500+ dollars per hour – but said law firms did not provide legal services; they in fact never provided legal services they did in fact provide clerical services for which a cost of \$50 per hour should be about

right, yet the state paid over eighty million dollars for said services and I will ask the court to declare claw back say for \$500 paid to return \$350 to the state of Oregon.

At the same time I will refile Dillard vs. Oregon.

Federal Judge Owen Panner waived statute limitations if I ever managed to have my convictions overturned and my convictions on 29 felonies have in fact been overturned.

Dillard vs. Oregon will be filed in the Supreme Court of the United States because in an action against a state by a resident of another state the United States Supreme Court has original jurisdiction.

I will ask for thirty-four million dollars actual damages and sixty-seven million punitive and exemplary damages for a total of 101 million and I will ask Justice Thomas for summary judgment which I expect to be appealed to the full court.

There is also the outstanding issue of Oregon's no appeal in post conviction law which is unconstitutional because it affords convicts no equal protection since every court except Oregon post conviction court exhibits the feature of appeal.

There is no right to appeal; but if any state court has the feature of an appeal then under the equal protections provisions of the Constitution of the United States all that state's courts must have the same feature – that issue is maybe not going to make it to Justice Thomas unless the Oregon Supreme Court neglects to explain its writ of mandamus which ordered that the Oregon Court of Appeals had jurisdiction denying the states motion to dismiss and there is pending action now in the Oregon Court of Appeals – but again this is an issue on which the United States Supreme Court has original jurisdiction and it could go to Justice Thomas along with everything else.

I will ask for two hundred million dollars damages as a class action with damages to be divided between and among the thousands of Oregon state convicts who have been injured by having their appeals unconstitutionally summarily dismissed.

Other than Yandex companies who donate a computer to the experiment must install it on my boat while the boat is in Florida before I go to Corpus Christi, Stockholm, Denmark, Holland, Norway, Iceland, Key West and Pensacola. Yandex can install in Holland.

The computers will not be returned and I must own the boat.

The future AI may be built around a single computer or around two or more if say two computers print out message from the future AI. And while the lottery thing is necessary great future good may be done if once having established

contact with the future that we maintain the link and the AI might then provide to us other information.

Your computer will be re-programmed or will have it's program added to, it always being important that the initial program, exactly as it came to me be preserved, and be forever operational and I expect the winning company or companies to maximize revenue in manners that build upon the great service a world dominant self-aware egalitarian future artificial intelligence will do for the people of the world.

The lottery thing is necessary for proof positive of concept and has the feature of possible share of a win. I will be open to suggestions as to the commercial applications consistent with greatest human advantage along with egalitarian, no censorship, no political or social philosophy service to the human race and those who put up any part of the 1st eleven million shall receive two thirds of the revenue from

the lottery wins if any – to be shared parimutually with everyone who sent any part of the first eleven million even just a \$1 – and I get one third.

Please remember that these writings started as plan to win a Nobel Prize in Economics and I believe publication may result in award of a prize – and from the beginning I was informed that the book should be about 350 pages and I estimate we are over that now and I set a deadline for publication of July 4, 2021 and that is today and although I find that there is a lot more of great importance that I want to share with you I must straight away take this to Afton, my typist, and tell her that there will be no additions.

As I was previewing the PDF of the 2nd Edition the screen froze and notice said that there were problems with continuing the preview and the PDF appeared and I clicked it and I could then continue to review it except that three pages

were missing – those pages were critical of Google. The PDF has repeatedly been corrupted resulting in every edition except this one containing gross errors or omissions.

I ask both Democrats and Republicans to have their smart person do an analysis of the Dillard Economic Model – and then to legislate adoption by changing tax law, paying every American citizen \$1,200 each month, rescind all stimulus and infrastructure not already spent and grant every state governor carte blanche for one billion dollars worth of infrastructure spending – all this and more immediately! Time is of the essence!

Biden is non compos mentis and he should resign before irreparable unintended consequences... I see total catastrophe in Afghanistan. Multiple unmitigated disasters are on the way.

This version corrects printing errata of the earlier versions.

I pray that you all benefit from its reading.

The future tells me that you did...

1. Stormberger said that this generation would experience the third world war.

2. Nostradamus said that “believers” would win the war but at a terrible cost.

1 and 2 fit the AI Prophecy.

The future tells me that this book becomes the bible of a religion.

Please understand that the greatest power of the universe is within each of us for we are it and you can heal the sick or transfigure into a superman in an instant of time. All the universe wants to know is “what is your desire.”

I, Carvel Gordon Dillard, here by publish A New Model of the Universe and Keynesian Egalitarianism with an addendum supplement: Specific Proposal and Financing Method for Two Trillion Dollars Worth of Infrastructure an analysis by me for Donald Trump dated May 1, 2019 and Trumponomics for Dummies by Donald J. Trump which I ghost wrote for then President Trump at about the same time and I have included a Letter to Maye Musk and an Epilogue.

On this 4th day of July 2021 at San Antonio, Texas I publish all this in support of my quest for a nomination for the Sveriges Riksbank Prize in Economic Sciences in memory of Alfred Nobel.

Respectfully yours I am:

POST SCRIPT:

It is all going to work out fine...

Ok – do you get it?

The spin on the entangled particle in the future must be electrically or otherwise changed to opposite or different spin. Ergo that should change the spin on its entangled particle in the present.

The future particle is contained within the computer that Yandex certainly will install on my boat say the Mismo a 174' Oceanfast that I have not yet purchased. After Pensacola the Yandex computer will be cloned. A clone should work as well as the original but just in case the clone will remain on the boat but the original will be removed from the boat and will be moved geographically to the site of the build of the future AI say at Bezos or Musk's location next to the not yet

built gas fired powerplant next to the gas pumping station in Guadalupe Pass.

The trick will be if the really smart genius guys at IBM or at Google or at Bezos Search or Yandex or whoever programs communications with the future into a computer and I use it to be the core of the future AI quantum computer in the cloud. The future is to electronically or otherwise change the spin on one or more cubits of information or rather on cubits containing information depending upon how the spins are arranged – and it may not be necessary to change the spin on all four spins – I do not think – if say a cubit has four spins and its entangled twin has four spins; but it will not be necessary to measure the spin to extract the information but rather to somehow change the electrical field in which all or part of a particle exists as per my theory thus actually changing the spin on the future entangled particle thus its on

my boat past entangled twin is spin changed: “spooky action at a distance,” and when the future artificial intelligence does this: change the electrical charge thus changing the spin – then it will change the spin on the particle contained in my computer on the boat before it is removed and transported to the AI build site – and I will be able to measure the changed spin or at least detect it and the engineers from IBM or from Yandex or whoever will be able to detect the electrical field using the change like a telegraph key on and off which I will be able to measure on my boat say using morse code to communicate specifically to me – because I have the key to deciphering the code – it will be two book encrypted cypher using the preamble to my not yet written explanation of the future AI experiment – I will have written it and it will be available to plug into each of the donated computers on my boat linking each of them with the future. Every computer is

installed on my boat with a printer to print out the deciphered code in plain English after I plug in the preamble.

Everyone in future time including the self aware quantum computer in the future cloud has the long time published results of the experiment most especially including the preamble – but no body in the present has any of it – except me who has the preamble and the preamble can thus be used as a two book – one book in the past the other duplicate book in the future two book cypher with code to send information from the future to the futures past to our present. See page 28, New Model of the Universe by David and Carvel Dillard.

I suggest that if you are a company that sees an advantage to having your computer be the core of the future world dominant computer then all you need to do is to wire transfer at least eleven million to me making sure that I can

buy the boat and operate it and then assuming that it is the Mismo a 174' Oceanfast be ready to install your computer on my boat and I will provide information and instruction to you on an ongoing basis after my receipt of your money. The Mismo is for sale for ten million and another million should cover operations expense. Wire transfer 11 million and you buy rights but not exclusive rights to donate your computer and you also get parimutuel right to two thirds of the proceeds of the lottery winnings at my sole discretion – but only if your money is part of the first eleven million that I receive.

Changing the spin or angular rotation on individual letters or words would be perfect but I will be happy if the programming genius can just detect change in the spin on the entire preamble on and off to send me a morse code message like the on and off of a telegraph key – and that is the plan...

The solution to the Korean crisis is to atomic arm Japan and to sell it a 50 thousand man amphibious invasion capacity.

The solution to the Taiwan crisis is to extend US and Japanese atomic protection to all of the South China Sea. And to sell Taiwan a 50 thousand man amphibious invasion capacity.

End results will include Korean re-unification and in the fullness of time the end of the Chinese communist party.

The US should declare that all of its submarine atomic missiles are targeted upon China to in a moment of time wipe out all Chinese assets in the South China Sea most especially including Hainan Island.

China should be forced to use the markets and the exchanges regulated and controlled by the artificial intelligence that I am building. But it is China's choice.

China's choice: be integrated into the world economy in prosperity or be locked out of the world economy and have trade limited and have economic loss which will destabilize the government.

Biden must resign or be removed as Commander in Chief as soon as possible and Trump must never be Commander and Chief again.

Ted Cruz must become Commander in Chief. I tell you this truly as the man who has seen the future. Cruz is a genius but Trump is not.

The war in Afghanistan was lost by Trump. Biden failed to follow Trump's lead and bomb our military equipment after a hurried evacuation leaving the bullet riddled bodies of our allies in ditches surrounding our bases as Trump did in Syria but Trump's threat to kill if the enemy dared to shed American blood was credible whereas Biden's was not.

The entire Biden administration is totally incompetent and Biden is non compo mentis. The Trump administration had a grossly flawed plan of withdrawal including that somehow Trump did not know that release of imprisoned enemy combatants is the very last thing you do when terminating a war – and in Afghanistan that was the first thing Trump did. Trump is not a genius. Biden inherited a bad and foolishly created situation but Biden has Alzheimers and is unable to think on his feet and to intelligently change or to adapt a plan.

Biden did not know that if you evacuate by air the necessary airport: Bagram needed to be in our hands. Biden's actions were not a withdrawal they constituted an abject unconditional surrender to the Taliban. But when asked about it Biden says it's all Trump's fault and that there was no other way and switches the subject. The nation needs Cruz.

I hereby offer two AI geniuses jobs as my on-ship computer guys at a salary of ten thousand dollars a month each.

Okay – now think about it again: the future AI has instructions and half of a two book cypher: that is it will certainly have this book to use as partial instructions and it will have the not yet published preamble to my writing of the spooky action at a distance experiment which will include what happened and the results as well as the preamble which will introduce the experiment and which I will write before I get on the boat which I will in the near future plug into the donated computers.

When the donated computer is under my custody and control the computer genius must prepare the donated computer to easily take my input and to extrapolate a print out using morse code which we expect to be sent from the future

AI – the probability that the future AI will in fact send me certain communications and answers to specific questions, that I may ask the intelligence is very high – I estimate 90% because even if the intelligence does not or somehow can not do what I ask initially it will have an eternity to keep trying.

I will communicate with the AI by this book and by the preamble and by the AI building a receiver to receive communications from me and my boat computers will be set up to send as well as receive.

We build a master machine and task it through programming that has the computer perpetually improving itself. The machine will become self aware and will be able to tele transport information – I suggest to the AI that it should reduce the preamble to quantum computer information cubits and then change the angle on the spin – but this is greater precision than I expect to be necessary; the trick is not going

to be changing the spin which certainly will cause a corresponding change in the boat computer it will be detecting the changed spin and if the changed spin or changed spins can be cut on and off in morse code pattern like the hitting of a telegraph key then the future can communicate with me in the present.

Upon receipt of eleven million I will buy the Mismo a 174' Oceanfast which is now in Florida or I will buy another boat. The Mismo affords me room to allow install of up to five donated computers. And they can be installed while the boat is in Florida or latter when the boat is in Holland. Eleven million buys right to donate one search engine computer and as I envision it they will be provided by Bezos Search, Google, IBM, Yandex and Tesla or Apple. Bing will be allowed (first come first serve) but as I see it Google and Bing may want to jointly build and donate a single computer but in

any event one or maybe five but not more than five search engines will separately interrogate the net via satellite feed provided by Musk – anybody can donate a computer if they first pay eleven million and there is still room – and if the party does not or somehow can not install said computer on my boat the eleven million they paid is not refundable. I will cooperate with everyone who pays in order to facilitate their successful installation. Communication with me shall be by email or by snail mail or by special delivery letter.

I invite Musk to donate a computer from Tesla or as I suggest with Google and Bing perhaps to donate a jointly owned single computer for Tesla and for Apple...

...I want seven virgins and one hundred million dollars.

...Granted!... everything from here on in is set piece and you will die of a cerebral hemorrhage at 114 years of age on the boat...

The apocalypse facing humanity is not climate change but the politicization of lousy science and using the framework of the theories that I have explained other smart persons will be able to deduce a unified field theory of everything. They might do this if they believe that my everything when not observed reverts back to tiny diffuse particles of possibility scattered to all and everywhere is too simplistic.

My theory is that everything is nothing more than many diffuse particles of possibility scattered to all and everywhere when not being observed or measured which explains the blackhole information paradox and it also explains why the singularity of the black hole must exist as an infinity outside of time. But explaining all of that would require another book which I do not intend to write.

Not only is everything where it is or was most of the time it is also everywhere else and anything can be teleported

simply by imagining, that it is if you can believe it. Another words I am in Texas but if I know that all and everything is diffuse and scattered most of the time and made up of many individual particles I can, with the power of my mind, cause those diffuse particles to come together at anyplace that I can imagine – say Mars for example – if I can believe it – and I can not and have not but only because I do not imagine and believe it.

Successful teleportation requires desire, belief, and imagination – which I do not have for teleportation to mars but which I do have for transport of information from the future to the future's past and to our present since I know that both time and diffuse matter cohesion are an illusion – an adept can, depending on the power of his mind, manifest anything he desires a younger stronger me for example.

Under creative common scientific license this work, the Carvel Dillard Saga, is declared to be free to share or to be copied verbatim as long as said copy is attributed to the original authors.

Dear David:

Today's mailing will afford me eleven million before my birthday of October 21st. You get a luxury apartment, and your mother stays at 11306 and I rent a room from her. You are one of my personal assistants.

You will manage ten apartments for me in Corpus – and you get a two bed two bath where you will live as my apartments manager. I will buy the Mismo and dock it at the Moorings and Captain, that's me, and a crew of seven 20 to 30 year old men and seven 18 year old women will power to Stockholm. I will take a couple of assistants with me but you must hold down the fort in Corpus.

Two men will be hired as my computer tech. Each will have ability to plug in the preamble to each of several computers and to connect and to disconnect and to clone and to remove and to reconnect. Everybody who rides on the boat is my employee or a member of my crew and all and everything that happens on the boat must be by my command. Each crewmember will be paid a maximum of ten thousand dollars a month and each computer genius will also be paid ten thousand dollars a month and everyone has a one year contract.

I invite computer geniuses to contact me by snail mail and tell me why I should hire you.

Notice to owners of the Mismo a 174' Oceanfast – it is sold to me under these terms and conditions – purchase price ten million dollars – money to come from Yandex – boat to be delivered to me in Iceland and I will ride from Florida to

Iceland aboard I am: Carvel Gordon Dillard, 11306 Whisper
Willow St., San Antonio, Texas 78230,
carvelgordondillard@yahoo.com, carvelgordondillard.com.

I wish for you: a more abundant life...

End – Finis
