The Ultrasound Cavitation treatment carries with it possible health complications and consequences, which include but might not be limited to the risk of kidney failure, liver failure, pacemaker failure, birth defect, miscarriage, thyroid damage, damage to the ovaries, lactation complications, hyper-triglyceridemia, hypercholesterolemia, pancreatitis, infection, scarring and/or allergic reaction to any products used, excessive thirst, dehydration, nausea.

The Ultrasound Cavitation treatment includes, but is not limited to, the use of high-power low-frequency ultrasound cavitation which uses 30KHz frequency ultrasound to penetrate the skin and assist with the breakdown of fat cells by creating micro-bubbles that increase the pressure around the adipocyte and force it to implode, thus breaking down adipocyte's cell membrane.
