

NOVACROWN

Going Where Crown Moulding Has Never Gone Before

Now There Is An Alternative

...to expensive, hard-to-install mdf, wood and gypsum mouldings that is economical enough to apply throughout an entire development.

Constructed from a cellular styrene core permanently bonded to a smooth paper wrap, NovaCrown™ Mouldings last a lifetime without deficiencies.

Feather-light NovaCrown™ mouldings can be handled, cut and installed by one person. Nailing is not required so they are easily applied to any substrate, even directly to concrete walls - without the need to locate studs.

NovaCrown™ is the longest non/fibre crown moulding in the world which means fewer joints and faster installations.
