

## MOTOR STARTER CONTROL PANEL

The Motor Starter Panel is designed to start/stop fuel transfer pumps for emergency power applications. The Motor Starter Panel is customized to provide required operating functions for individual or multiple pumps, depending on site specifications or requirements. Standard enclosures are NEMA 3R, 4, 12. Voltage components based on pump voltage requirements.

The Motor Starter Panel comes with separate electrical disconnects for each pump to ensure safe operations. Additional internal electrical disconnects with thermal overload protection are also provided on the inside of the panel. Motor Starter contactors are monitored by the Pumpset Control Panel via auxiliary switches.

### Options

- Runtime meters
- Voltage monitors to reduce pump failure
- All NEMA enclosures available
