

CF Corrugated Board

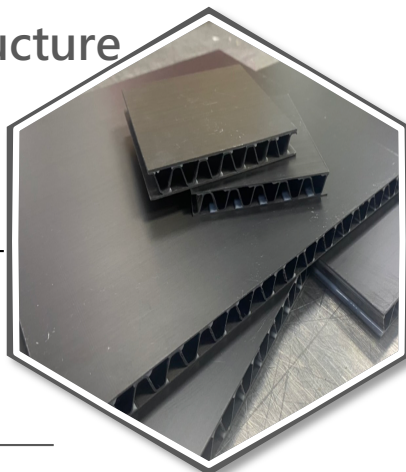

Product introduction :

- Light weighting product / High flexural modulus composites structure / Resistance for pressure and bending / Support lateral support
- Manufacture module design for mass production

Corrugated structure

Different from traditional structure of sandwich honeycomb, make the corrugated board by carbon fibre material to be real "Carbon Fibre sandwich structure".

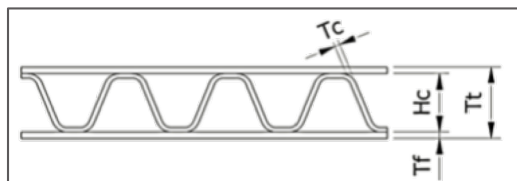

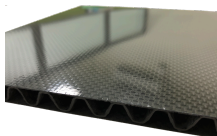

Widely Application

The flexural modulus and strength of carbon fibre is better than metal, so it can be used for various domain.

Other domain's Application

Aerospace

Carbon fibre have the advantage of light-weighting, moisture resistant, anti-corrosion and anti-fatigue.
