Provincial Parks Containment Enclosure

Ontario Parks Containment Buildings

Spill containment is a key issue for an Ontario Parks Supervisor. Maintenance equipment must be safely stored and contained so no liquid will seep into the environment.

Several years ago RM Products was awarded the order to design and manufacture a fiberglass containment building to ensure the safe storage of the parks maintenance equipment. Wakami and Shoals Provincial Parks were the first buildings to be installed. Nagagamisis and Lake Superior Provincial parks then completed their installation.

Our innovative containment floor design provides a continuous fiberglass material from floor to wall to ceiling. The Ontario Parks spill containment buildings required a grated floor placed on top of the fiberglass pan which allows spillage to flow under and remain below the walking space in the enclosure. When required, steel or fiberglass grating can be supplied.

The chemical resistance of fiberglass is an ideal match for this application. Fiberglass will not rot, rust or corrode in the presence of even the most corrosive chemicals. Additional options for this application include explosion proof electrical equipment, blow out panels and proper ventilation. These or any other required options can be added to your enclosure.

RM Products Fiberglass Modular Buildings

RM Products Ltd's prefabricated fiberglass structures are available in a wide range of sizes and designs to suit your specific need. In addition to standard sizes RM Products is proud to specialize in custom designs. From concept to final product RM's CAD design and support team provide a total solution to your equipment enclosure needs. Panel style and specific requests (including doors, windows, electrical, insulation, containment floor and vents) are customizable to suit the exact requirements.

RM Products buildings are easy to install by others or our assembly team can be provided.
