Fire Suppressant System

RM Products Ltd. is pleased to now offer an Economical Fire Suppressant System to protect your equipment in case of fire.

- This revolutionary new product when activated by heat automatically fights fire without water.
- It can reduce damage and mess to your equipment and valuables in case of a fire.
- Each unit is independently tested to provide effective fire suppression to a 16' x 16' area.
- This system is easily mounted with RM's bracket system allows you to install this in our buildings in minutes or you can order these pre-installed in our preassembled buildings.
- Unlike water suppression, the dry-chem agent in the unit does not cause extensive damage when discharged.
- The dry-chem agent used is safe when discharged, as it is essentially a form of baking soda.
- The super-fine ABC dry-chem agent inside the system cleans up easily with a vacuum in the event of a discharge.
- Since cold temperatures don't affect performance, the system is perfect for use in outbuildings of all kinds (no power is required).
- The heat-activated trigger means the system will not discharge in the presence of smoke. It must be extremely hot (ie. Real Fire) in order for the unit to automatically discharge.
