

RM Products Ltd.

Control Panel Cover

An RM control panel cover is pictured here. It was required to cover equipment on the outside of a building at a chemical odor control fill station at the Hartford WPCF Regional Solids Receiving Facility and Gravity Thickener Upgrade Project.

Arcadis Design and Consultancy was hired to provide the cover so they contacted RM Products Ltd. to manufacture a 48.75" wide x 25" deep x 62" high control panel cover.

- The cover had to be attached to an existing wall so we provided an internal angle to mount to the existing wall. The cover bottom is fiberglass.
- The cover has a 3 point locking latch.
- The cover was manufactured at our plant and shipped to the end user for installation.

Odor control is a very large concern especially in populated areas. Of course, equipment must be used to control the odor and that equipment often needs to be covered.

RM Products can provide the equipment enclosures and equipment coves for these applications.

We are specified into projects because our modular cabinets and enclosures are made of fiberglass so they are:

- Virtually Maintenance Free
- Mold & Mildew Resistant
- Non-Corrosive
- Chemical Resistant
