ATTACHMENTS EZ-HD88 EXTREME POLE SETTER

KEY FEATURES

Attaches to large excavators or wheel loaders

Rotates 115 degrees to the operators left

Maximum opening of jaws is 26 inches

Minimum opening of jaws is 13 inches.

Inserts available for smaller diameter

Can handle poles up to 100 feet and up to 10,000 lbs with appropriately rated machine.

The two(2) jaws operate independently and close in sequence for safety and security.

As a stand-alone unit it employs two large clamp cylinders on the base to rotate the tool-head and provide stability and precision.

EQUIPMENT SPECIFICATION

The clamping is activated by two(2) 4"X 8" clamp cylinders with check valves to ensure safety in case of a hydraulic line break.

Comes standard with rubber lining on the jaws to protect the pole and allow use on any type of pole.

3/4" flush faced couplers

PRODUCT DESCRIPTION AND APPLICATIONS

The Extreme Duty Pole Setter is a beast that is capable of pulling and setting poles or pipes weighing up to 10,000 pounds. The Extreme Pole Setter is made to be attached to large excavators or large wheel loaders and easily sets large transmission poles with its 115 degree rotation. The Extreme Pole Setter also has an optional hand tamper circuit to allow a line-crew to tamp a pole without the need for another hydraulic line. The Extreme Pole Setter comes standard with jaws meant to handle larger transmission poles or pipes but inserts may be purchased from EZ SPOT UR to handle smaller distribution poles.
