

Full-Stack AI Developers & Agentic Engineering Professionals Wanted

Help Our Entrepreneurial Clients: **Do AI Right—Because We Do IT Right™**

See more at: **JoinTeamGrant.com**

Artificial Intelligence is changing how business stewards compete.

But successful AI solutions are not built by chasing the latest shiny new technologies. They are built by combining sound software engineering, thoughtful architecture, disciplined execution, and a relentless focus on solving real customer problems.

We believe the next generation of AI companies will be built by multidisciplinary teams that combine excellent engineering with sound product thinking and genuine customer empathy, because Agentic AI and modern “vibe coding” still require experienced professionals who understand how complete systems are designed, built, integrated, secured, and maintained.

Fitness Interface LLC is building a network of AI and software professionals who help entrepreneurs throughout the Las Vegas area develop practical, production-ready AI applications.

Current client opportunities range from early-stage MVPs to small pilot programs to large business transformation initiatives.

We’re interested in professionals with experience across one or more portions of the modern AI application landscape, especially those with demonstrated expertise in areas such as:

- MCP servers, AI tool integration, and agent orchestration frameworks
- Next.js / React / TypeScript
- Python or Node.js backend development
- OpenAI APIs and LLM integration
- Retrieval-Augmented Generation (RAG)
- Vector databases (Qdrant, Pinecone, Weaviate, Chroma, etc.)
- PostgreSQL and relational databases
- Semantic search and retrieval pipelines
- API design and integration
- Cloud platforms (Azure, AWS, Google Cloud, Vercel)
- Authentication and security
- Prompt engineering and structured outputs
- AI agents and workflow orchestration
- Testing, deployment, monitoring, and DevOps
- UX/UI design
- Product management
- Technical writing and documentation
- Scrum, Agile, or other collaborative delivery practices

You don’t need experience with everything listed.

What matters most is your ability to build reliable systems, learn quickly, collaborate well, and deliver measurable business value through customer-centric, OKR-driven execution guided by your empathy, agency, ethics, and vision.

If you believe your experience can help entrepreneurs successfully adopt AI, we'd like to hear from you.

Please send:

- Your résumé
- Your elevator speech for why today's entrepreneurs would benefit from your help
- A cover letter explaining the kinds of AI or software problems you solve best
- Links to your portfolio, GitHub, demos, or representative work (where available)

Compensation structures are flexible and may variously include traditional consulting arrangements, project-based work, subcontracting, revenue sharing, and other mutually beneficial agreements depending on the engagement.

Let's build AI that delivers real value—not just impressive résumés and demos, because by working together as a team through Fitness Interface LLC...

We Do AI Right—Because We Do IT Right™
