

May 2026

Dear Valued Customer,

The ClearSky Global corporation and its Executive stand firmly behind the ClearSky Complete product and its claims to improve fuel efficiency and reduce emissions while not harming engines.

ClearSky Complete's organic chemistry is relatively simple, and the product does not contain any explosive components, such as cetane boosters, that are hard on engines. In fact, the opposite is the case, as ClearSky Complete will cool your engine and exhaust temperatures and will not adversely impact engine timing. Unlike fossil fuel additives containing cetane boosters, ClearSky complete is gentle on your engine.

The Technology patent holder, SulNox Group, a publicly listed company in the UK, and its customers and distributors have tested fuel treated with the product multiple times to ensure that it does not take fuel out of ASTM, EN, BS or CGSB specification. Therefore, ClearSky Complete will not void OEM warranties. They have even gone as far as testing a 5x overtreat level and the fuel remains in ASTM specification. ClearSky can make comparative analyses of treated and untreated fuel available to customers upon request.

It is the standard practice of OEM manufacturers to not endorse any specific fuels or any fuel treatment products or technologies. ClearSky can however provide letters of non objection from OEM manufacturers upon request.

Based on this, ClearSky's technology partner maintains insurance covering engine damage caused by the product taking a customer's fuel out of specification. ClearSky, our technology partner, distributors and customers have never experienced engine damage caused by the product. Hundreds of customers globally now use this product daily, including the use in many large multimillion dollar marine engines.

This experience and the robust third-party testing by multiple testing agencies, customers and distributors, including Lloyd's of London, provides assurance that the ClearSky Complete product will not negatively impact your fuel, and therefore will not cause harm to your engines.

ClearSky Complete is safe and effective to use and the ClearSky Executive stands behind the product.
