# \*FULL\* THERMODYNAMIC CONTROL

A heated & cooled jacket, referred to as a "thermoregulated" or "temperature-controlled" jacket, offers more versatile temperature management compared to a simple heated jacket in **medical applications**.

Let's find out some ways in which a heated and cooled jacket can be advantageous

**Prevention of Thermal Injuries:** In healthcare or extreme environmental settings, thermal injuries (burns or frostbite) are always a concern. A jacket that can both heat & cool can minimise the risk of thermal injuries by offering better control over the temperature applied to the patient's body.

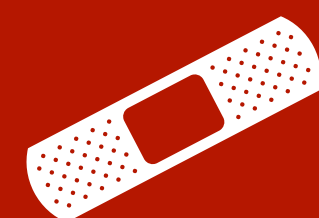

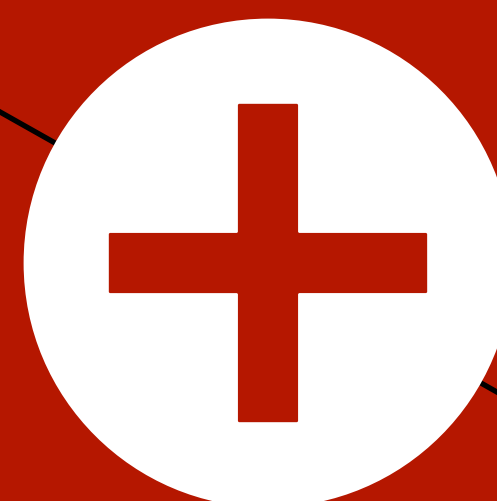

**Hyperthermia & Hypothermia Prevention:** In altitude climbing settings, avoiding hyperthermia (overheating)/hypothermia (excessive cooling) is crucial, especially during fever or post-operative recovery & prevent chilling in situations where a patient's temperature needs to be lowered gradually. A heated & cooled jacket can quickly adapt to changing temperature needs, reducing the risk of these complications.

**Enhanced Outdoor Activities:** Heat and cool jackets are popular among outdoor enthusiasts, such as hikers, campers, and skiers. By regulating your body temperature, they can extend the duration and enjoyment of outdoor activities. This can contribute to improved physical fitness and mental well-being.

**Post-Operative Care:** After certain medical procedures, such as orthopaedic surgeries or wound healing, maintaining the right temperature around the surgical site can promote healing and reduce inflammation. A heated & cooled jacket can be tailored to the patient's needs for optimal post-operative care promoting healing and reducing the risk of infection.

# ADVENTURE RANGE

No mountain shall be impossible to summit & no adventure would be beyond your capabilities.

Now plan your next extreme journey with your loved ones while we keep you cocooned in warmth even in most extreme temperatures & wind pressures.

Get your heart racing with adrenaline as you zip into our super comfortable adventure range jackets & trench coats .

## FEATURES:

### EXTRA WARM CONTROL

*\*Specially designed to provide optimum warmth in sub zero environments\**

# CORPORATE RANGE

Making your routine office life easier with versatile range of corporate wear. Common health symptoms like cough/ cold etc can be caused by temperature fluctuation & premise ventilation.

Feeling too warm outside or too cold inside? A few taps on your phone & we got you covered.

Also keep your wifi business cards protected from malicious hack attempts inside our meticulously designed encrypted card pockets.

## FEATURES:

**WARM / COOL CONTROL**  
**ENCRYPTED CARD POCKET**

# CASUAL RANGE

Step out to the weekend in style  
with our tech infused jackets.

Create unlimited memories with  
your friends & loved ones as you  
snap away some cool selfies &  
group videos while keeping your  
phone wirelessly charged.

Now dance your night away  
without sweating or enjoy a  
perfect candlelight dinner on  
rooftops without freezing.

## FEATURES:

**WARM / COOL CONTROL**  
**WIRELESS CHARGING**  
**ENCRYPTED CARD POCKET**

# - | ABOUT US | -

The inspiration to launch Ecoease smart wearables came through hands on experience fighting against climate change & a thirst for creating advanced hardware technology amid rising global geo-political tensions.

According to Harvard Professor Noam Wassermann, 65% of ventures fail because of conflict among co-founders. A solopreneur ensures *zero chance of this risk*. Think Amazon, SpaceX, Oyo, Paytm etc! Ecoease is proudly helmed by Utkarsh Nahar, a finance professional on a mission to invent futuristic indigenous technologies instead of merely improving existing infrastructure.

For the first time ever, we introduce you a new world of revolutionary clothing, something humans have never experienced since the dawn of evolution. Come see the magic of blending hi-tech innovation into your daily wear as blending ultra-realistic experiences takes centre-stage across the Ecoease wearable line.

## **VISION STATEMENT:**

Pioneer invention of dual use smart wearable assets with state of art designs by constantly discovering limitless possibilities of advanced human experiences across commercial & defence sector.
