15 Years	Green	Yellow	Yellow	Yellow		Purple	Yellow	Yellow	Yellow	Yellow	Yellow
18 Years	Green	Yellow	Yellow	Green, Yellow		Purple	Yellow	Yellow	Yellow	Yellow	Yellow

More information: Preteens and teens should get a flu vaccine every year. Preteens and teens should get one shot of Tdap at age 11 or 12 years. All 11-12 year olds should get a 2-shot series of HPV vaccine at least 6 months apart. A 3-shot series is needed for those with weakened immune systems and those age 15 or older. All 11-12 year olds should get a single shot of a quadrivalent meningococcal conjugate vaccine (MenACWY). A booster shot is recommended at age 16. Teens, 16-18 years old, may be vaccinated with a MenB vaccine.

 These shaded boxes indicate when the vaccine is recommended for all children unless your doctor tells you that your child cannot safely receive the vaccine.

 These shaded boxes indicate the vaccine should be given if a child is catching-up on missed vaccines.

 These shaded boxes indicate the vaccine is recommended for children with certain health or lifestyle conditions that put them at an increased risk for serious diseases. See vaccine-specific recommendations at www.cdc.gov/vaccines/pubs/ACIP-list.htm.

 This shaded box indicates the vaccine is recommended for children not at increased risk but who wish to get the vaccine after speaking to a provider.
