## FOREWORD

In the last four years (2015-2018), the global power supply industry experienced significant ups and downs beyond the normal peaks and valleys of a business cycle creating significant uncertainty. This uncertainty was the result of significant globalization (an event in one region creating a significant impact on the other region), emergence of: dynamic markets (mobile devices like mobile phones and tablets replacing laptop and desktop computers), software/service businesses (Google, Facebook, Twitter etc.) and new markets like LEDs and battery chargers for electric vehicles. In addition, new paradigm in adapter markets has emerged, that they can be sold directly to end customers at higher prices. With increasing popularity of mobile devices, this additional profitable market is increasing. In summary, power supply market dynamics is changing, with relatively flat established markets, high growth LED s and battery charger for EVs and emerging end user market. All these four markets offer unique opportunities for power supply companies.

This Global Switching Power Supply Industry 2018 Report provides a comprehensive analysis of the changing dynamics within the power supply industry. It provides a quantitative measure and qualitative analysis. The analysis is provided at the “Global Level” because regional-level business transactions are indeterminate. The power supply business has become global, especially for multinational power supply manufacturers (PSMs) and their OEM customers. For example, PSMs tend to design power supplies in one location (Americas), manufacture them in another (APAC: China) and then market/sales them in a third region (EMEA). For large companies, globalization has blurred the market lines between different regions. However, the power supply industry also consists of many small companies that manufacture and sell their products in their “native regions.” For them, the regional markets are more important than the global markets. The report provides information on both types of markets for both types of companies. In 2017, transportation sector is analyzed more comprehensively due to emergence of battery charger market. To provide consistency to this segment the commercial aviation category has been moved from the military/aerospace to the transportation segment.

Power supplies are a unique commodity with multiple user/marketing/sales parameters. So the power supply data can be organized in many different combinations of different parameters creating a massive database. Here are examples of power supplies in various possible data organizations:

Power supplies are a unique commodity with multiple user/marketing/sales parameters. So power supply data can be organized in many different combinations of different parameters creating a massive database. Here are examples of power supplies in various possible data organizations:
