FOREWORD

This Global Switching Power Supply Industry 2024 Report provides a comprehensive analysis and forecast, based on these changed dynamics within the electronic equipment and the power supply industry. The forecast is based on analyzing data from hundreds of major OEMs and interviews from select companies. The future remains uncertain.

Market analysis of battery chargers for electric vehicles has been excluded from this report as MTC concluded that it is a different industry than the Global Switching Power Supply Industry as defined in the report. As a result, data compilation and aggregation between two industries became difficult. Any inconvenience due to this change is regretted.

The analysis is provided at the “Global Level” because regional-level business transactions are indeterminate. The power supply business has become global, especially for multinational power supply manufacturers (PSMs) and their OEM customers. For example, power supply manufacturers can be designing power supplies in one region, like the Americas, manufacturing them in another region like the APAC and selling them in a third region like EMEA. This dynamic business transaction has blurred the market determination between different regions. In addition, the power supply industry also consists of many small companies that manufacture and sell their products in their “native or local regions.” For them, the regional markets are more important than the global markets. So the report provides information on both types of markets for both types of companies.

Power supplies are a unique commodity with multiple user/marketing/sales parameters. So the power supply data can be organized in many different combinations of different parameters. This report has organized this data in the following manner:

- **Products: AC-DC & DC-DC (exclude battery chargers for EVs)**
- **Regions: Americas, EMEA, APAC & Rest of World (should not be used as a market)**
- **Markets: LED, CON, COE, NTE, IND, MED, TRN & MIL**
- **Output Power: 0-50W... or 0-150W... depending upon the product**
- **Product Types: Standard, modified-standard & custom**

With all these combinations, it is impossible to provide market size and trends for all possible applications and all possible product categories. Micro-Tech Consultants (MTC) has provided data and analysis for the most commonly used and most significant categories. It has provided in-depth information about the Global Switching Power Supply Industry along with market statistics in major geographic regions:

- **Americas (AMER)**
- **Europe, Middle East & Africa (EMEA)**
- **Asia Pacific (APAC)**
- **Rest of World (ROW category is created to reconcile market numbers, not as a market segment)**

The report also includes:

- **An analysis of various markets: LEDs, consumer, information technology (IT) consisting of computers and networking and telecommunications, industrial/instrumentation, medical, transportation sector and Military/Aerospace equipment in different geographic regions**
- **An analysis of emerging trends related to new architectures: DPA—Distributed Power Architecture: using isolated DC-DC converters and IBA—Intermediate Bus Architecture—using non-isolated converters**
- **Emerging Trends In: Global changes, power architectures and related products, product models business models and strategic trends**
