

## REASONS TO CONSIDER

**High Growth Potential**

The global clean energy transition is well underway. Forecasts suggest that global onshore wind power capacity could almost double between 2024 and 2030.<sup>(1)</sup>

**Advancing Clean Technologies**

Wind-powered turbines produce zero direct emissions, meaning broader adoption could result in reduced greenhouse gas emissions and improved air quality.<sup>(2)</sup>

**Unconstrained Approach**

Wind energy is a dynamic theme, supporting a long-term structural shift in worldwide energy use. WNDY invests accordingly, with global exposure across multiple sectors and industries.

Investing involves risk, including the possible loss of principal. The investable universe of companies in which WNDY may invest may be limited. Narrowly focused investments will be more susceptible to factors affecting that sector and subject to more volatility. Wind energy companies may be highly dependent upon government subsidies, contracts with government entities, and the successful development of new and proprietary technologies. Seasonal weather conditions, fluctuations in the supply of and demand for energy products, changes in energy prices, and international political events may cause fluctuations in the performance of such companies. International investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. WNDY is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn't available, the midpoint between the national best bid and national best offer ("NBBO") as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.
