

REASONS TO CONSIDER

**High Growth Potential**

Forecasts suggest that low-carbon hydrogen production could increase 30-fold to reach 16.4 million tonnes annually by 2030.⁽¹⁾

**Advancing Clean Technologies**

Hydrogen-powered fuel cells produce zero direct emissions, meaning broader adoption could result in reduced greenhouse gas emissions and improved air quality.⁽²⁾

**Global Tailwinds**

The shift to green energy isn't confined to a single sector or region. HYDR invests accordingly, with global exposure across multiple industries.

The performance data quoted represents past performance and does not guarantee future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than the performance quoted. High short-term performance, when observed, is unusual and investors should not expect such performance to be repeated. Returns for periods greater than one year are annualized. [Click here](#) for standard performance as of the most recent quarter-end.

DEFINITIONS

Solactive Global Hydrogen Index

The Underlying index is designed to provide exposure to companies that are positioned to benefit from further advances in the field of hydrogen technology. Hydrogen technology includes products and services focused on the development and implementation of hydrogen gas as a renewable fuel source. Hydrogen technology may play an important role in the transition toward renewable energy and fossil fuels. Specifically, the Underlying Index will include securities issued by “Hydrogen Companies” as defined by Solactive AG, the provider of the Underlying Index (the “Index Provider”).

(1) Bloomberg New Energy Finance, May 2024

(2) US Office of Energy Efficiency & Renewable Energy

Investing involves risk, including the possible loss of principal. Hydrogen companies typically face intense competition, short product lifecycles and potentially rapid product obsolescence. They may be significantly affected by fluctuations in energy prices and in the supply and demand of renewable energy, tax incentives, subsidies and other governmental regulations and policies. Investments in smaller companies typically exhibit higher volatility. HYDR is non-diversified. The information provided is not intended for trading purposes, and should not be considered investment advice.

Carefully consider the Fund’s investment objectives, risk factors, charges, and expenses before investing. This and additional information can be found in the Fund’s full or summary prospectus, which may be obtained by calling 1.888.493.8631, or by visiting globalxetfs.com. Please read the prospectus carefully before investing.

Shares of ETFs are bought and sold at market price (not NAV) and are not individually redeemed from the Fund. Brokerage commissions will reduce returns. The market price returns are based on the official closing price of an ETF share or, if the official closing price isn’t available, the midpoint between the national best bid and national best offer (“NBBO”) as of the time the ETF calculates current NAV per share, and do not represent the returns you would receive if you traded shares at other times. NAVs are calculated using prices as of 4:00 PM Eastern Time. Indices are unmanaged and do not include the effect of fees, expenses or sales charges. One cannot invest directly in an index.

Since the Fund’s shares did not trade in the secondary market until several days after the Fund’s inception, for the period from inception to the first day of secondary market trading in Shares, the NAV of the Fund is used to calculate market returns.
