

NLIA General Membership Meeting Summary
Saturday, May 25, 2024

Water Management Company Approval and Next Steps

Aqua Link

NLIA membership approved the Board's recommendation to establish a relationship with Aqua Link for lake management consulting, beginning with a \$5200 lake monitoring program, consisting of 3 rounds of comprehensive testing and analysis. The first round of testing was conducted on Thursday, 6/27. Results are expected within a few weeks.

A work group was established that will evaluate and recommend means of addressing harmful algal blooms (HABs) which may occur. Aqua Link plays a key role in helping identify prospective treatments which can effectively address HAB events without compromising the ongoing bio-dredging being performed by CleanFlo under our ARPA grant. They have provided a recommendation, which will be presented for discussion under New Business at the NLIA Association meeting on June 29, 2024. Two NLIA members, Bob Ochs and Jason Zubris, were nominated to the work group that also includes Preston Gibson, Gene Lucas and JD Paternoster.

Lake Condition and Management Company Updates

The approved motion included proactive communication to membership regarding Aqua Link representative remarks, reports and updates as well as North Lake resident observations which reflect Y2Y improvement.
