

ALGAE

Algae Treatments

- Treat by **small** sections
 - Protects fish allowing them to move to untreated side of water
- Best to apply it in **2 week** intervals
 - Reduces risk for fish kills
 - Allows chemical to fully develop on vegetation
- We **do not** want to put too much chemical into a living ecosystem

What to Expect

- Certain vegetation is resilient
 - Can switch chemical if needed based on how vegetation is responding to application
- Dead material stays in water
 - **Decomposes** over time
 - Floating algae may clump together
 - Coloration will go from lime green, to yellow, to brown
- Lime green algae is alive and may **require** treatment
