Use Case	Offline, Off-grid AI, 100% private and secure, nobody knows what your using it for. Operates without an internet connection anywhere in the world	Best option for those that require scalability and 100% uptime. Better for employees than a business. No intellectual property protection, Not private and security is debatable. Gets extremely expensive with more users and usage.	This option is hands down the best for a business. Includes access control for individuals and data, Control over data and data access, Ability to secure company data. 95% uptime.	This option is the best option for those who want to host thier own AI server but need to trave or relocate contantly and care about security and privacy
