### Collecting Dates:

June 1st - July 1st - August 1st - September 1st

#### Monitoring Nuts:

1. Place fiber glass poles on a 45 degree angle. It would be beneficial to flag each stake to identify easily. On first stake write monitor # that's provided by the lab
2. Soil samples are collected between trees 10" deep with the 1st inch discarded
3. Collect 25+ leaves & petioles from most recently fully expanded leaves
4. Wash with tap water and place in a paper bag that's labeled with your monitor #
5. View results at [www.westernlaboratories.com](http://www.westernlaboratories.com) under the Results/Tutorials tab with the username & password given to you by the lab
