

BENEFITS OF CIRCUMCISION

- **Reduced risk of Urinary Tract Infection** – Urinary Tract Infection or UTI as it is commonly known is not a very common kind of infection. However, this infection is reported to less likely occur on circumcised men. Uncircumcised men and babies run a higher risk of getting UTI unlike their circumcised counterparts. Thus, it is beneficial and important to undertake a circumcision surgery .
- **Reduced risk of penile cancer** – Penile cancer is also not a very common type of cancer. However, studies and statistics show that uncircumcised men run a higher risk of getting penile cancer as compared to circumcised men. Any type of cancer can be fatal and this is not something that you may want to risk your life with. Thus, in order to stay safe and free of contracting penile cancer, it is important that you get a safe circumcision operation.

BENEFITS OF CIRCUMCISION

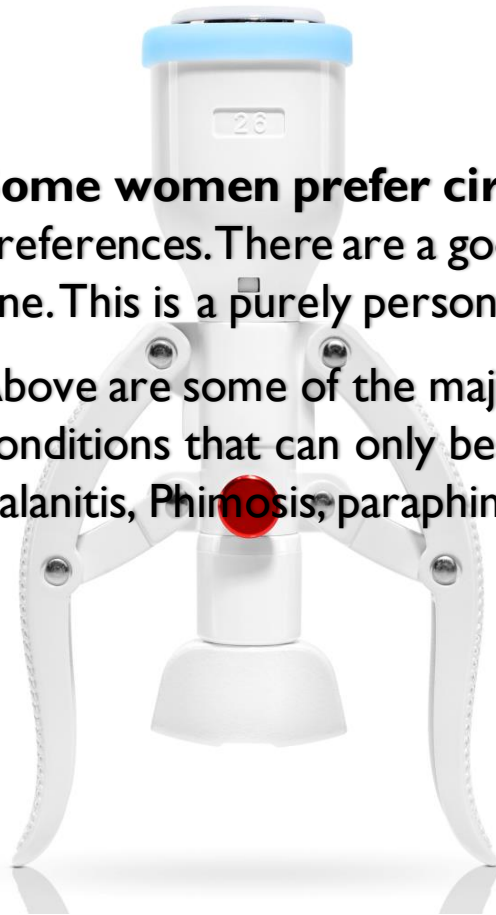

- **Reduced risk of sexually transmitted diseases** – There are quite a number of sexually transmitted diseases. Nonetheless, sexually transmitted diseases are often times fatal or may cause severe complications if they go unchecked. One of the most fatal sexually transmitted disease is the HIV virus. Studies show that circumcision reduces the chances of a man contracting HIV virus and other sexually transmitted diseases by up to sixty percent. This is a big margin and it can be the difference between life and death. Remember also that the HIV virus has no cure and it has killed hundreds of thousands of people across the globe. One effective way to reduce the risk of STD's is to get circumcised.
- **Reduces your female partner's risk of cervical cancer** – Cervical cancer is the leading type of cancer that affects women. Cervical cancer is caused by a number of reasons and research has also shown that women who have uncircumcised partners run a higher risk of getting this type of cancer.

BENEFITS OF CIRCUMCISION

- **Increased genital hygiene** – Circumcision surgery helps in keeping a man's genitalia clean. When a male person is uncircumcised there is tendency of dirt accumulating underneath the foreskin. Over time, this accumulated dirt causes bacterial and fungal infections which may prove fatal in the long run. Cleaning is also another issue when it comes to uncircumcised penises. It can be difficult to clean underneath of the foreskin and that is the prime reason why there is always accumulation of dirt. However, for a circumcised penis on the other hand, it is very easy to clean up. There is no place or space for dirt to build up and thus it is easy to stay clean and avoid fungal and bacterial infections
- **Hygiene for your sexual partner** – Circumcision in Bangalore is a favoured practice for the hygiene of your sexual partner. Your partner will be better protected in terms of cleanliness when you are circumcised. A circumcised penis is clean and easy to clean as well. Your sexual partner would not run the risks of infections due to bacteria and viruses that may be found underneath the foreskin.

BENEFITS OF CIRCUMCISION

- **Some women prefer circumcised men due to personal preference** – Everybody has their own preferences. There are a good number of women who would prefer a circumcised partner to an uncircumcised one. This is a purely personal preference or choice and it may vary greatly with different kinds of people.
- Above are some of the major benefits associated with circumcision in . However, there are also other medical conditions that can only be effectively cured or put under control by circumcision. These conditions include: Balanitis, Phimosis, paraphimosis and tight foreskin.
