

Not Another Fracked Gas Plant in Connecticut

- ◆ The Killingly Plant in northeast CT would spew 2 million tons of CO2 into the air yearly
- ◆ Governor Lamont has admitted Connecticut doesn't need the electricity
- ◆ This is an international problem. The world has only one atmosphere
- ◆ The local state senator and 25 state reps in northeast CT oppose the plant
- ◆ We can't meet the governor's own goal of carbon free power net in 2040 if this power plant is built
- ◆ Email the governor and ask him to cancel. Google "contact governor lamont" for his address.
