

# HOW TO ATTACH LAZES TO YOUR SHOES

## You will need:

To add Lazes laces to your shoes, you are going to need, your desired pair of shoes, the lazes and a pair of scissors.

### Step 1.

To start, you're going to remove the current shoelaces from your shoes. This is a super simple step to complete; you simply gently tug on the lace and pull the lace out of the hole. Repeat this until you have completely removed shoelace.

### Step 2.

Next, you're going to insert your new Lazes to your pair of shoes. To begin this step, grab one end of your shoelace and the bottom hole of your shoe, (the one closest to your toes.) Remember to insert the shoelace under the hole the first time and then alternate until you are at the top of your shoe.

### Step 3.

Now you're going to grab your spring lock and push the button in the middle down. While holding the button down you are going to insert one of the ends of the laces to the hole until it threads all the way through. Once you've threaded the first one through you the hole, put the other end of the shoelace through the other hole.

### Step 4.

You have now got to choose your length. The length is the distance of space you have on your shoes to adjust things like the looseness and tightness.

Once you've found your preferred length, grab a pair of scissors and chop off the excess shoelace.

### Step 5.

Finally, Grab the Tail Clip and open it up. Ensure the two ends of your shoelace are of a equal length, then insert them through the middle of the tail clip. Once they've found a snug place under the plastic teeth of the tail clip, close the clip tightly waiting until you hear a small snap noise from the tail clip.
