

1. Prevention is KEY! Implant Maintenance, Home-Care & Disease Treatment

Learn what clinicians need to know to prevent peri-implant complications based on Susan's textbook: ***Peri-Implant Therapy for the Dental Hygienist: 2nd Edition***. This course will provide clinicians the procedures to **detect** early signs of peri-implant disease, **diagnose** any implant complications, and be able to provide **treatment**. Peri-Implant prevention starts with providing professional in-office assessment, maintenance, and personalize home-care recommendations, vital for long-term implant success!

Learning Objectives:

1. Learn the current research protocols, tools, treatments, and complications for long-term prevention of peri-implant disease.
2. **Detect:** Put into practice assessment and monitor protocols for all forms of implant-borne restorations/ prosthesis patients.
3. **Diagnose:** Understand the major risk factors for peri-implantitis for early intervention based on American Academy of Periodontology (AAP) classification / EFP S3 level clinical practice guidelines.
4. **Treatment:** Be able to perform in-office professional implant maintenance, disease treatment, and identify home-care strategies for more predictable outcomes - peri-implantitis prevention.

2. Prevent, Protect, Preserve! Comprehensive Care Teeth & Implant Patients – Workshop option

It's a vital time for complete care of our patients' natural teeth, implants, restorations and most importantly their overall health. As dental professionals, we now have a new role to incorporate biofilm science into our prophylaxis and disease treatment protocols. We need to educate our patients on inflammation, oral systemic connection, and a biofilm-focused home care regimen. This course will present a new perspective on your prophylaxis, periodontal and peri-implant disease treatment protocols. **Prevention** for natural teeth, **protection** of implants, and **preservation** of restorations for comprehensive patient care!

Learning Objectives:

1. Learn the current guidelines and clinical applications for Tooth / Implant-borne restoration patients and Periodontal / Peri-Implant Disease Treatment
2. Put into clinical practice new protocols, tools, and products for patients' natural teeth, implants, and preservation of restorations.
3. Understand WHY biofilm-focused home-care is essential for patients' oral and overall health.
4. Participate in an interactive, advanced instrumentation, and trial of the latest preventive, protective, and preservation products.

3. Mastering the Arch! Full Arch Implant Maintenance and Home-Care

Support your patients choosing to replace dentures or edentulous arches with implant-supported full arch fixed or removable prostheses. Assessment of patient's tissues, abutments, and implants are the critical component in the success of implant-supported Full Arch prosthesis patients. In this course, participants will gain an understanding on how to provide assessment, maintenance, and home-care protocols for the **'full arch fixed and removable prosthesis patient'**. Experience step-by-step videos on removal and replacement of the fixed full arch prosthesis based on Susan's textbook: ***Peri-implant Therapy for the Dental Hygienist: 2nd Edition***. Comprehend the WHAT, WHY, and HOW To Master the ARCH!

Learning Objectives:

1. Understand the current research on implant maintenance and home-care specifics to protect the implant surface and peri-implantitis prevention.
2. Experience through live patient videos HOW TO remove and replace full arch prostheses and the flow of a professional implant maintenance visit.
3. Be able to provide the tools and products for critical home-care recommendation and disease prevention.

4. Lights, Lasers, Cure! Healing Light Therapies to Offer Patients 1.5 CE

Healing therapies are now available for dentists and hygienists to offer to their patients in-office and everyday life. Discover how healing soft tissue with Low Level Light Therapy can reduce inflammation, increase healing, relieve both acute and chronic pain after surgical procedures, for pathology, and disease treatment. This program will introduce you to the latest protocols, product ingredients, diode lasers, and red-light therapy to maximize patients' treatment results.

Learning Objectives:

1. Discuss how products have evolved, what to use now to protect natural teeth, implants, and restorations.
2. Learn how combining science with technology and specific ingredients in products can maximize treatment results for natural teeth and implants.
3. Explore light energy, photobiomodulation and diode laser options to reduce inflammation, provide patients post-surgical healing, and pain relief.
