

## How to draw a Butterfly!

This is a fun and easy way to learn to draw a butterfly.. in just 2 square inches... well actually not quite 2.

1: Draw a box  $2 \times 1\frac{3}{4}$  inches and divide it down the middle and again horizontally at the 1" mark. ( The top half of the box is 1 inch and the lower is  $\frac{3}{4}$  of an inch.) Draw a diagonal line from the top Right to the lower centre corner where the lines intersect. And repeat this on the Left.

2: Draw in the body of the butterfly so that the centre of the body covers the spot where all the lines intersect. Draw in two lines ( one on either side of the lower half of the body

3: Draw in the edges of the top wings as shown in the illustration.

4: Draw in the lower wings as shown. ( the two small lines are the inner edge of the lower wings.

5: Add all of the details to the wings as you choose. Erase all of the excess lines.
