<b>PALMS &amp; CYCADS</b>					
	<b>Goussia attenuata / Llume Palm</b>	1G / 1P	100	\$9.00	Critically endangered. From cliffs of Puerto Rico / Hispaniola, slender stem, open crown, plumose deep green leaves, fast growing, moderate watering, drought tolerant, ornamental value, pretty, small orange fruit
	<b>Thrinax radiata / Florida Thatch Palm</b>	1G / 1P	450	\$4.50	The Florida thatch palm is a slender, solitary, very slow-growing, palmate fan palm. Growth averages no more than 6 inches a year. It may grow to a height of 30 feet, but it is often much smaller. It is adapted to growing in full sun or varying shade
	<b>Coccolthrinax barbadensis / Silver Thatch Palm / Latanier Palm</b>	1G / 1P	325	\$5.50	Solitary trunk with costapalmate leaves and an open crown. The leaves have slightly drooping tips, and a silvery underside. Exceptionally tall and slender.
	<b>Sabal causiarum</b>	1G / 1P	16	\$6.00	Solitary, massive, upright stems. Leaf bases usually fall away quickly to leave a smooth gray stem with close rings. Leaves: Costapalmate, induplicate, twisted into several planes with a strongly arching costa, to 2 m wide. Leaf segments rigid, with numerous fibers along the segment margins. Flowers creamy white
	<b>Areca catechu / Beetlenut Palm</b>	1G / 1P	6	\$6.50	also named betel palm, is a handsome tree cultivated throughout the warmer parts of Asia for its yellowish-red fruits, which contain conical-shaped seeds with a flattened base. They are brownish in color externally, and internally are mottled like a nutmeg. Areca catechu seeds, also known as betel nuts, have been widely used in traditional Chinese medicine as an antiparasitic agent for thousands of years.
	<b>Microcycas calocoma</b>	TP12 / 1P	1	\$236.00	Microcycas calocoma is one of the most ancient cycad species. It is endemic to a small area in western Cuba in Pinar del Río Province. Critically Endangered in the wild. evergreen Perennial growing to 10 m (32ft) by 4 m (13ft) at a slow rate. It is hardy to zone (UK) 10. Suitable for: light (sandy), medium (loamy) and heavy (clay) soils and prefers well-drained soil.

	<b>Zamia variegata</b>	4G / 1P	1	\$46.00	A small cycad with very attractive, green and yellow mottled leaves, native to rainforests and pine-oak forests in Chiapas in southern Mexico and in Guatemala, Belize and Honduras. It is considered endangered through destruction of its natural habitat by human activities.
	<b>Ceratozamia keusteriana</b>	4G / 1P	3	\$360.00	Solitary, massive, upright stems. Leaf bases usually fall away quickly to leave a smooth gray stem with close rings. Leaves: Costapalmate, induplicate, twisted into several planes with a strongly arching costa, to 2 m wide. Leaf segments rigid, with numerous fibers along the segment margins. Flowers creamy white
	<b>Dioon spinulosum</b>	2G / 1P	6	\$29.00	Dioon spinulosum, giant dioon, or gum palm, is a cycad endemic to limestone cliffs and rocky hillsides in the tropical rainforests of Veracruz and Oaxaca, Mexico. It is one of the tallest cycads in the world, growing to 12m in height.
	<b>Encephalartos hildebrandtii</b>	3G / 1P	6	\$29.00	Native to Kenya and Tanzania. Encephalartos hildebrandtii is an evergreen, palm-like tree with a stout unbranched bole covered with leaf scars and topped with a rosette of many, long leaves. The plant can reach up to 6 metres tall, though it is often much shorter. The dark green, arching, pinnate, leaves can be 3 metres long, the leaf stalk bearing about 80 pairs of stiff, tough and leathery leaflet
<b>TREES &amp; SHRUBS</b>					
	<b>Cassia roxburghii / Red Cassia Tree</b>	3G/1P	9	\$16.00	The red cassia is a medium-sized tree, growing to 15–20 m tall with spreading, drooping branches. The leaves are clusters of pink, rose or orange flowers, long, and pinnate with three to eight pairs of leaflets, Showy flowers are produced in pendulous racemes with red to pinkish petals. Fruit is a legume.
	<b>Garcinia spicata / Mangosteen</b>	1G / 1P	150	\$13.00	Native to India and Sri Lanka, an interesting Garcinia, used both as an ornamental for its interesting, glossy foliage and for colorful fruits that have medicinal properties. The orange-yellow fruits are extremely popular with tropical birds. Tolerant of salty conditions and ocean spray. Grows well in full or filtered sun. The tree is very adaptable to container culture. Features thick, slender, glossy and ornamental leaves. Very slow growing.

	<b>Garcinia spicata / Mangosteen</b>	3G / 1P	200	\$36.00	Native to India and Sri Lanka, an interesting Garcinia, used both as an ornamental for its interesting, glossy foliage and for colorful fruits that have medicinal properties. The orange-yellow fruits are extremely popular with tropical birds. Tolerant of salty conditions and ocean spray. Grows well in full or filtered sun. The tree is very adaptable to container culture. Features thick, slender, glossy and ornamental leaves. Very slow growing.
	<b>Moringa olifeira / Moringa</b>	3G / 1P	36	\$13.00	Moringa oleifera is a fast-growing, drought-resistant tree of the family Moringaceae, native to tropical and sub-tropical regions of South Asia. Common names include moringa, drumstick tree and horseradish tree. Known for its medicinal uses.
	<b>Ebenopsis Ebanio</b>	1G / 1P	46	\$16.00	Texas ebony flowers are yellow or cream-colored umbels about 2" in length borne in paniculate clusters on the end of twigs. They appear from June to August. The legumes turn from green to dark brown or black as they mature in the fall. The wood of Texas ebony is used for furniture and fence posts, and the seeds can be used as a coffee substitute
	<b>Guaiacum officinale</b>	1G / 1P	6	\$16.00	Texas ebony flowers are yellow or cream-colored umbels about 2" in length borne in paniculate clusters on the end of twigs. They appear from June to August. The legumes turn from green to dark brown or black as they mature in the fall. The wood of Texas ebony is used for furniture and fence posts, and the seeds can be used as a coffee substitute
	<b>Guaiacum sanctum</b>	1G / 1P	39	\$16.00	commonly known as holywood or holywood lignum-vitae, is a species of flowering plant in the creosote bush family. It ranges from India, Sri Lanka, Java and the Tivu islets of the Indian ocean, southern Florida in the United States and the Bahamas south to Central America and the Greater Antilles. It is threatened by habitat loss.
	<b>Podocarpus macrophyllus</b>	1G / 1P	6	\$4.00	It is a small to medium size evergreen tree, reaching 20 m tall. The leaves are strap-shaped, 6–12 cm long, and about 1 cm broad, with a central midrib. The cones are borne on a short stem, and have 2-4 scales.
	<b>Caesalpinia granadillo / Bridalveil Tree</b>	1G / 1P	12	\$6.00	Bridalveil Tree makes a wonderful shade tree, the 35-foot-high tree clothed with finely textured, pinnately compound, evergreen leaves and showy yellow blossoms. The bark is also quite striking, peeling off in thin strips showing an unusual green and grey mottling. Highly desirable tree for planting in almost any landscape.

	<b>Ceiba Sp.</b>	2G / 1P	13	\$9.00	The silk floss tree is a species of deciduous tree native to the tropical and subtropical forests of South America. It has several local common names, such as palo borracho, samu'ũ or paineira. In Bolivia, it is called toborochi, meaning "tree of refuge" or "sheltering tree". It belongs to the same family as the baobab and the kapok.
	<b>Adonsonia Gregorii</b>	1G / 1P	2	\$9.00	Adansonia is a genus of about 12 species, principally found in Africa. They are generally small to large trees with a very distinctive shape comprising a broad, swollen trunk. The appearance is almost of a tree growing upside down with the branches as the roots!
	<b>Vitex trifolia</b>	1G / 1P	6	\$6.00	Vitex trifolia 'Purpurea' (Arabian Lilac) A very fast growing evergreen to semi-evergreen shrub or small tree to 10 to 15 feet tall by as wide with distinctively colored leaves sometimes but not always divided into three elliptical leaflets that are a gray-green on the upper surface but upturned to display the showy velvety purple below. The leaves give off a peppery scent when crushed
	<b>Majidea zanguebarica</b>	3G / 1P	6	\$13.00	The mgambo tree, Majidea zanguebarica, native to East Africa is a small tree at maturity growing up to 5 metres (16 ft) tall. This very ornamental small tree has shiny foliage with an attractive rounded canopy, making it very suitable for small tropical gardens or a container plant in cooler climates. They are hardy only in frost-free zones, otherwise they can make a rare and unique houseplant as they are smaller when container grown.
	<b>Cojoba arborea</b>	4" - 1G	20	\$9.00	Cojoba arborea is a small to very large evergreen tree with a broad, spreading crown. It is capable of growing up to 35 metres tall with a bole that is sometimes supported by high, narrow buttresses and can be 100cm in diameter. The tree is harvested from the wild for its valuable wood. The timber, known in the trade as 'Bahama sabicu', is exported principally from the West Indies. The tree is often grown as an ornamental and shade tree
	<b>Barringtonia racemosa</b>	3G / 1P	6	\$23.00	Evergreen tree, medium size. This small tree likes damp coastal swamps, but is also cultivated as ornamental for its long, hanging strands of pink or white flowers which are comprised in numerous filaments. Bunches of flower buds are hanging down from the branches, flowers with sweet fragrance bloom in the nights of June to August. Leaves are huge, up to 2 ft long and 4-5" wide, with toothed edge, very tropical looking. They are spiraled at the end of branches.
	<b>Phyllanthus arbuscula</b>	3G / 1P	3	\$6.00	from Jamaica, near threatened, tiny flowers along serrated leaf margins, common name: foliage flower. Near \threatened in natural habitat.

	<b>Phyllanthus angustifolius</b>	3G / 1P	3	\$6.00	from Caribbean covers itself in tiny pink flowers throughout the year. blooms smell of corn chips, slow grower, leaves are flattened petioles or flower stems, dense habit, medium size shrub, very drought resistant. If maintained small by regular pruning, it can make a beautiful pot plant. common name 'Foliage flower'
	<b>Syzygium malaccense</b>	3G / 1P	5	\$39.00	Malay apple is an evergreen tree with a spreading but cone-shaped crown; it usually grows 5 - 20 metres tall, though specimens to 30 metres have been recorded from New Guinea. The straight, cylindrical bole can be 20 - 45cm in diameter, often branching from near the ground though sometimes free of branches for 10 - 15 metres, with buttresses at the base. The edible fruit is fairly well liked, it is harvested from the wild and consumed locally. a.k.a. Mountain Apple. Rare.
