

Bellara

Natural Beauty,
Locked in

Siding crafted to emulate natural wood, engineered from steel, designed to last a lifetime.

Mimics Nature

The process for creating a Bellara panel starts at the lumber mill, where we search for rare woods with elegant grains and rustic boards that have a beautifully aged patina. Ultra-high-resolution imaging captures the intricacies of all the grains and knots.

Left to Right
Warm Rosewood
Brindle Barnboard
Charred Circle Sawn

The granular details within each wood grain are digitally composited over 5 unique plank designs per package. This creates a pattern variation and depth that's indistinguishable from natural wood. The result is a continuous pattern that is visually seamless.

Once perfected, these images are etched onto copper plates. They are then painted onto the steel using state-of-the-art coil coating technology combined with the world's best PVDF paints to lock in the wood's natural beauty for generations.

Bridging Natural and Built Environments

Bellara supports biophilic designs that provide an emotional and physiological connection to nature. Studies are linking spaces that take advantage of this biophilic design practice to improving health and wellness outcomes because they both engage and relax the mind.

Hyper-realistic design

Each Bellara panel covers 5-1/4 inches by 12 feet long and features a 5/8" thick architectural profile to mimic natural wood planks. Whether installed vertically or horizontally, the Bellara system produces straight, architectural lines and comes together with a set of color-matched trims to create a seamless facade.

Locked in Beauty
The finish is applied to the roll-formed locking mechanisms so when the side and bottom locks come together, there is no gap in color and wood grain.

This snapping lock feature makes installation equally seamless.

The Bellara fasteners are hidden as well as engineered to be secured tightly to the building's fascia and won't pop out like nails do over time.

Bellara Rosewood

Bellara Rosewood grains capture the sleek
and smooth look of planed wood.

Galvanized Steel Construction

Because Bellara panels are made from galvanized steel, they offer long-term protection from rust. Unlike painted siding, Bellara panels won't flake from UV exposure.

Bellara meets AAMA 2605 standards, the most stringent specification for:

- Color retention
- Chalk resistance
- Erosion resistance
- Salt spray
- Humidity
- Warranty

Bellara is a non combustible material as evaluated with Standard, CAN/ULC S114

Matching trim system

The Bellara trim system address every conceivable architectural element. So regardless of your vision, Bellara can be tailored to your exact standard and still achieve a flawless finish.
