During Tournament hours, competitors must not depart the boat to land fish or to make the boat more accessible to fishing waters. You are NOT allowed to use a winch, pulley, come along, cable, rope or similar device/tools to gain access to tournament waters. Competitors may not shift their weight outside of the boat and onto a dock or other object outside of the boat for the purpose of landing fish or accessing a fishing spot. Boat Captains & Student Anglers are allowed, for boat protection, to push or shove off objects while landing a fish and still be counted as legal. Boats must remain in tournament waters during tournament hours. Competitors must leave and return to official checkpoints by boat. Both competitors must always remain in the boat, except in case of dire emergency or with permission from the Tournament Director for rest room breaks. In such an emergency, or with permission of the Tournament Director, competitors may be removed from their boat either to a boat operated by other competitors or a rescue boat designated by the Tournament Director. Partners must always remain together, in sight of each other and each other's catch, under the conditions cited above for their catch of that day to be scored in the tournament. In breakdown situations, afternoon check-in times **DO NOT change**. With tournament official's permission, boat captains may transfer their boat's student anglers & fish to another competitor's boat and ride to check-in, and they may leave their boat captain with the disabled boat. In such cases, student anglers are REQUIRED to always stay with their catches, and the assisting boat's partners should verify the catch. Any high school team whose boat is disabled that rides with another competitor or rescue boat to weigh-in is NOT allowed to fish. In the event of a needed restroom break or refueling situation at a marina gas pump, contestants are allowed to leave the boat. If a competitor violates any of the above conditions (to contact a tournament official by phone or other means, or to report an emergency or breakdown), both competitors must cease fishing at this point and their catch must be verified by a tournament official to be counted in the tournament. If, after the emergency is resolved by tournament officials, enough time is left for the competitors to resume fishing, a restart will be allowed, the competitors will continue, and their catch will be counted. This applies ONLY to dire emergency situations as determined by the Tournament Director or his/her designated representative. Towing boats on trailers during tournament hours is prohibited, except by the direction of tournament officials.

BOAT BREAKDOWNS/ACCIDENTS

ALL breakdowns/accidents and/or repairs are REQUIRED to be reported to Tournament Director and/or SC Bass Nation Youth Director, FIRST. Per BASSMASTER Rules, once contact has been made with Tournament Director and/or SC Bass Nation Youth Director, Team Coaches/ Boat Captains can plan to get their student anglers and catch of the day back to weigh in with another teammate and/or competitor team.

CHECK IN TIME DOES NOT CHANGE DUE TO BREAKDOWNS/ACCIDENTS

Included in this Info Package are several pages relating to proper fish care that EVERYONE needs to adopt and practice while fishing as what we release today, we catch again tomorrow.

- **Even below 250 HP, a motor that has been modified in a way that makes it unsafe for the boat it's on (e.g., overpowering a small boat) is also prohibited.**

Prohibited Engine Modifications and Horsepower Compliance (Safety Rule):

For the safety of all participants and in strict adherence to B.A.S.S. regulations, any boat motor that has been modified, tuned, or altered in any manner to exceed either (1) the manufacturer's original horsepower rating or (2) the maximum horsepower rating for the vessel on which it is mounted is strictly prohibited.

This includes, without limitation, any modification that results in engine output exceeding the 250 HP maximum allowed under B.A.S.S. rules, as well as any modification—regardless of the engine's stated horsepower—that causes the vessel to operate beyond the manufacturer's rated safety specifications. For example, installing or modifying a 225 HP motor to produce excessive performance on a boat rated for significantly less constitutes a violation of this rule, even though the engine remains under the 250 HP cap.

Prohibited modifications include, but are not limited to: ECM (Engine Control Module) flashing or reprogramming, aftermarket tuning, high-performance upgrades, or any unauthorized alteration designed to increase the engine's power output or speed capabilities beyond factory specifications.

All vessels must comply with U.S. Coast Guard regulations and must not exceed the horsepower limit listed on the vessel's capacity plate. Any team found in violation of these safety standards will be immediately disqualified and may be subject to further disciplinary action, including suspension or permanent ban from competition.

On-Site Inspection Authority: Tournament officials reserve the right to inspect any vessel at any time, including but not limited to: verifying capacity plates, confirming horsepower ratings, and checking for signs of engine modifications. Refusal to comply with an inspection request will be treated as a violation and result in disqualification.

These standards exist not only to ensure fair competition, but to protect the safety and well-being of all participants on the water.

For SAFETY reasons, ALL Boat Ramps will close when Blast Off begins.

TOURNAMENT MORNING CHECK IN

Tournament Morning Check-In & Boat Staging Policy

Tournament check-in will begin promptly at 4:30 AM on the morning of the event. The Tournament Trailer will close once morning activities begin. Any team arriving after the trailer closes will be checked in only after Blast Off has concluded.

Only officially registered participants — including Anglers, Boat Captains, or Team Coaches — are permitted to check in their team at the Tournament Trailer. A Team Coach may check in all teams under their supervision, if they so choose.

Each team will be issued a Numbered Boat Float or Staging Card at check-in. This card serves two critical purposes:

1. Blast Off Order Control – Ensures boats launch in numerical order within their assigned flight.
2. Safety Accountability – Confirms that all registered teams have returned safely from the water.

It is mandatory that this card be turned in at the conclusion of the tournament.

- Failure to return the Numbered Boat Float or Number Staging Card will result in a recorded score of “0” for that event.
- Teams who fail to follow blast-off staging instructions will be moved to the end of the launch order.

Boat Captains are expected to assist in ensuring an orderly and efficient blast-off. Your cooperation is essential for the safety and success of the tournament.

LIVE WELL CHECK

Properly working Live wells will be checked during blast off procedures. Any boat coming to the tournament site by water, boat captain is responsible for checking their team in and advising a staff member that live well needs to be checked.

DOCK PARKING

DO NOT TIE UP TO ANY DOCK!!! Docks are used for loading & unloading of Student Anglers & Boat Captains ONLY. In the mornings, once everyone is onboard, boats must move away from the dock to allow ample use of the dock by other teams for the same purposes. Fish Care must be a HIGH priority

B.A.S.S. is a leader in conservation but we need help to maintain that reputation. Every catch is now recorded for television, printed in magazines or live-streamed on the Internet. What you do and say influences other anglers - and how they perceive you and B.A.S.S. It is critical that you **"Do it right."**

1. Landing & Handling...

- **The #1 complaint from fans watching our tournaments is boat-flipping fish onto the carpet.** We discourage this 1) to protect the bass' slime coat, and 2) because it looks to our viewers like we don't care about the wellbeing of the fish.
- **Make every effort to grasp the fish by lower jaw or lift them by the line** - catching them before they hit the deck. **DO NOT** lay fish on hot, dry carpet when culling.

2. Livewell Operation is Critical to Survival...

- **Water temps below 65°F** pump in freshwater at regular intervals to refresh the livewell.
- **Water temps from 65-75°F** pump fresh water *continuously* and turn on your recirculating aerator.
- **Water temps over 75°F** fill livewells early, cool with small amounts of ice and turn on the recirculating aerator full time. Don't pump in hot surface water all day. Do not add *excessive* amounts of ice - Cool the water no more than 10°F below lake temps. This is usually no more than 5-8 lbs per side. Too much cooling causes shock when the fish are released after weigh-in. Add additional ice as needed to maintain temps.
- **Keep both livewells full** and divide your catch. Use pool noodles or sponges to reduce sloshing.
- **Install livewell lid ventilation devices** to help cool the water, allow fresh air in and CO₂ out.

3. Fizzing Can't Wait...

- **Learn to fizz.** Fish caught in deep water suffer with overinflated air bladders. Leaving this untreated for just a few hours reduces survival. Check fish regularly and fizz them in the boat! Do not wait for the tournament staff to render first-aid on the release boat. How-to videos for smallmouth and largemouth at <https://video.bassmaster.com/detail/videos/conservation>. Contact Gene Gilliland for a needle source.
- **Weighted fin clips do NOT cure over-inflation** – restricted blood flow and damage to internal organs can still occur even though the fish are upright and appear normal. You must fizz struggling fish.

4. Bagging Fish & Weigh-in Lines...

- **Keep your fish in your mesh bag while waiting in line.** Please do not pull fish out to show to fans or photographers backstage. They can get photos in your boat while you are bagging, or on stage. Excessive handling and air exposure causes additional delayed mortality that we hear about long after we are gone.

Steps to treating Barotrauma - over-inflation of the swim bladder

1. Put fish in livewell allowing 5-10 minutes to acclimate before assessing need, re-assess several times throughout the day and treat fish immediately when symptoms are seen.
2. Symptoms – Fish can't remain upright, constantly struggle to submerge, float on side or back, bulge on side near tip of pectoral fin.
3. Hold fish firmly, slightly out of water (or place on smooth, wet surface) to insert needle.
4. Target area is the intersection of a line drawn straight towards the tail from the tip of the pectoral fin laid flat against the fish, with the vertical line for each species as shown in the diagrams: for largemouth, a near vertical line from the notch in the dorsal fin to the anal pore; and for smallmouth a diagonal line from the base of the 4th dorsal spine to the anal pore.
5. Insert clean 18-gauge x 1-1/2 inch hypodermic needle under a scale and into skin at a 45° angle towards the fish's head. Penetrate skin then rotate needle vertical to 90° and push straight in.
6. Keeping a wire reamer in the barrel of the needle while inserting will prevent clogging. Reamer can be made from welding tip cleaner wire or 10-ga stainless wire from tackle component suppliers. Attach reamer to needle hub with a length of braided fishing line (see photo on other side).
7. Hold the fish under water. Remove reamer after fish is submerged. Watch for bubbles. **DO NOT** squeeze. Allow gas to escape until the fish becomes neutrally buoyant (neither sinking nor floating).
8. Don't keep fish out of water longer than YOU can hold your breath - that's what the fish is doing!
9. Return fish to livewell and monitor frequently. A fish swimming upright is ready for release. But if the fish is still struggling/floating on its back or side, it could need a second fizzing.

KEEPING BASS ALIVE

Top 10 Fish Care Tips

- 1 Land fish quickly; Don't play them to exhaustion.
- 2 Use barbless or circle hooks whenever possible.
- 3 Protect the slime coat. Only touch fish with wet hands. Don't let fish flop on the boat deck. Use a rubber or nylon landing net.
- 4 Hold small bass vertically by the lower jaw. Support large fish horizontally with a hand under the anal fin.
- 5 Minimize air exposure time. Remove hooks quickly with as little tissue damage as possible.
- 6 Determine immediately if you are going to keep or release the fish and plan accordingly.
- 7 Proper livewell operation is a must to maximize survival. Follow guidelines in *Keeping Bass Alive* at Bassmaster.com/conservation.
- 8 Learn to spot swim bladder overinflation; immediately use side fizzing to relieve the condition.
- 9 Don't release fish into stagnant backwaters and high traffic areas.
- 10 Do not release injured fish or those too weak to swim. Better to harvest these.

Required Equipment

When preparing to go out on a vessel, the operator must check that the legally required equipment is on board.

Personal Flotation Devices (PFDs)

- All vessels must have at least one Type I, II, III, or V personal flotation device (life jacket) that is U.S. Coast Guard–approved, wearable, and of the proper size for each person on board or being towed. Sizing for PFDs is based on body weight and chest size.
- *South Carolina law requires all children under 12 years of age to wear a U.S. Coast Guard–approved Type I, II, III, or V PFD while on board a Class A (less than 16 feet long) vessel. The life jacket must be fastened and of the proper size for the child.*
- One U.S. Coast Guard–approved Type IV PFD must be on board vessels 16 feet or longer and readily accessible in addition to the above requirements.
- One Type V personal flotation device may be substituted for any other type if it is specifically approved by the U.S. Coast Guard for the activity at hand. Type V PFDs may not be substituted on children weighing less than 90 pounds.
- Each person riding on a PWC must wear a U.S. Coast Guard–approved Type I, II, III, or V personal flotation device.
- Each person being towed behind a vessel must wear a U.S. Coast Guard–approved Type I, II, III, or V PFD.
- All PFDs must be in good and serviceable condition and must be readily accessible.
- In certain situations, paddleboards must carry a U.S. Coast Guard–approved PFD for each person on board.

30 It's the Law!

TYPE I: Wearable Offshore Life Jackets

These vests are geared for rough or remote waters where rescue may take a while. They provide the most buoyancy, are excellent for flotation, and will turn most unconscious persons face up in the water.

TYPE II: Wearable Near-Shore Vests

These vests are good for calm waters when quick rescue is likely. A Type II may not turn some unconscious wearers face up in the water.

TYPE III: Wearable Flotation Aids

These vests or full-sleeved jackets are good for calm waters when quick rescue is likely. They are not recommended for rough waters since they will not turn most unconscious persons face up.

TYPE IV: Throwable Devices

These cushions and ring buoys are designed to be thrown to someone in trouble. Since a Type IV is not designed to be worn, it is neither for rough waters nor for persons who are unable to hold onto it.

TYPE V: Special-Use Devices

These vests, deck suits, hybrid PFDs, and others are designed for specific activities, such as windsurfing, kayaking, or water-skiing. *To be acceptable, Type V PFDs must be used in accordance with their labels.*

Navigation Lights

The required navigation lights must be displayed between sunset and sunrise and during periods of restricted visibility.

Power-Driven Vessels When Underway

If less than 65.6 feet long, these vessels must exhibit the lights as shown in illustration 1. Remember, power-driven vessels include sailboats operating under engine power. The required lights are:

- Red and green sidelights visible from a distance of at least two miles away—or if less than 39.4 feet long, at least one mile away—on a dark, clear night.
- An all-round white light or both a masthead light and a sternlight. These lights must be visible from a distance of at least two miles away on a dark, clear night. The all-round white light (or the masthead light) must be at least 3.3 feet higher than the sidelights.

Unpowered Vessels When Underway

Unpowered vessels are sailboats or vessels that are paddled, poled, or rowed.

- **If less than 65.6 feet long**, these vessels must exhibit the lights as shown in illustration 2. The required lights are:
 - Red and green sidelights visible from at least two miles away—or if less than 39.4 feet long, at least one mile away.
 - A sternlight visible from at least two miles away.
- **If less than 23.0 feet long**, these vessels should:
 - If practical, exhibit the same lights as required for unpowered vessels less than 65.6 feet in length.
 - If not practical, have on hand at least one lantern or flashlight shining a white light, as shown in illustration 3.

All Vessels When Not Underway

All vessels are required to display a white light visible in all directions whenever they are moored or anchored outside a designated mooring area between sunset and sunrise.

1. Power-Driven Vessels Less Than 65.6 Feet

The masthead light and sternlight may be combined as an all-round white light on vessels less than 39.4 feet long.

Less than 39.4 feet only

2. Unpowered Vessels Less Than 65.6 Feet

An alternative to the sidelights and sternlight is a combination red, green, and white light, which must be exhibited near the top of the mast.

3. Unpowered Vessels Less Than 23.0 Feet

Vessel operators should never leave shore without a flashlight. Even if you plan to return before dark, unforeseen developments might delay your return past nightfall.
