

Covalence Cloud

Comprehensive threat monitoring,
made simple, to defend against
cloud attacks.

Securing cloud services just got easier.

In just a few clicks, cloud services can bring convenience, speed, and enhanced performance to businesses of any size.

Your security defence should be just as easy.

But as cloud adoption grows, and you are migrating your data, there are more access points for attackers to take advantage of gaps in security — at the same time, attacks are getting smarter. Without the right resources, cyber security can be time consuming, costly, and ineffective.

It's time to stop cloud threats and gain peace-of-mind protection — all from one easy-to-use, intelligent threat monitoring, detection, and response platform.

The Challenge

43% of data breaches are the result of vulnerabilities in cloud applications — a year-over-year, two-fold increase.

Cloud technologies can save costs and enable your business to scale quickly. Yet, securing your business in the cloud can be a complex challenge.

The fact is, if your security doesn't keep pace with your cloud adoption, your business is at risk. From misconfigured, unpatched cloud apps to unmanaged access, permissions, and more, you may have security gaps that enable attackers to compromise your cloud data, and your IT network without your knowledge.

And as your cloud infrastructure grows, there are more apps and platforms to set up, manage, and secure — requiring expertise and time.

Unless you have the resources and experience to set up and continually maintain cloud security, and your cloud providers do the same, your business is at risk.

The Solution

You need to be able to identify security threats and vulnerabilities to your business. You also need to know how to prevent them.

It starts by understanding your cloud infrastructure, the potential risks to the data in your cloud systems, and the actions needed to protect against these threats.

Armed with clear, useful information that enables you to take the right action, you can strengthen your security defence and protect your business.

Meet Covalence Cloud

Modern threat protection for the cloud services you rely on.

Covalence provides threat monitoring, detection, and response capabilities unlike any other solution.

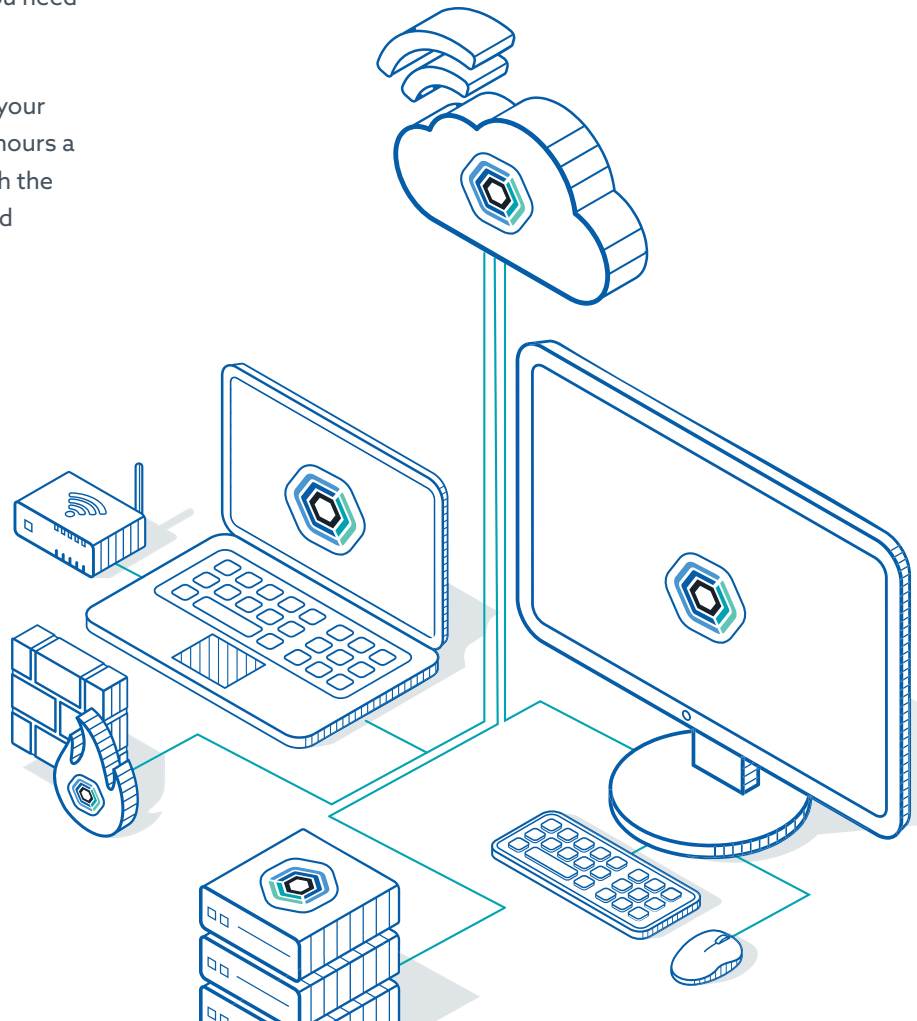

Whether you have a team of two or 2,000, work in one office or several, use just a few cloud services or have made a full transition to the cloud – Covalence Cloud provides the peace of mind that lets you focus on other priorities.

Covalence Cloud pinpoints the cloud threats and vulnerabilities targeting your business and provides the information you need to respond – all from one user-friendly platform.

Our proprietary analytics and technologies understand your cloud services at a detailed level, identifying threats 24 hours a day, seven days a week. Covalence Cloud breaks through the noise of typical threat alerting tools to resolve issues and secure your cloud services.

What's more, Covalence gets better over time. Our team is always improving its features and detection capabilities, assessing new ecosystems and evolving to prevent new threats before they emerge – with all enhancements delivered to you as they're released, at no additional cost. This continuous improvement ensures complete protection for your business.

Discover the advantages of a managed, automated service with cyber experts by your side.

Continuous monitoring, detection, and analysis to prevent attacks to your cloud services.

Covalence Cloud provides multiple benefits and features to protect your cloud investment. Secure Amazon Web Services, Microsoft Azure, Microsoft 365, Google Workspace, Dropbox, Box, Okta, and more.

GAIN PEACE-OF-MIND FOR YOUR CLOUD INFRASTRUCTURE

Stay well ahead of malicious or suspicious activity to your cloud traffic data through real-time information. Covalence uses data and logs from your cloud service providers to monitor and identify threats to your services, administrative components, user accounts, and more. Easily check the status of your cloud services, at any time, in your Covalence portal.

DISCOVER VULNERABILITIES AND RISKS

Recognize important changes to activity across your remote assets and technologies that may indicate risks, including unpatched software or unsecure endpoint devices, to understand and improve your security.

IDENTIFY COMPROMISED ACCOUNTS

Prevent unauthorized access to user accounts and spot signs of financial redirection-style attacks through our user and account analytics, and continuous monitoring of data points at the authentication layers of your applications and endpoint devices.

EXPERIENCE ADVANCED MONITORING AND ANALYTICS

Benefit from machine learning and cloud analytic capabilities that provide continuous analysis of user and service data to identify threats. The result is real-time visibility to detect, monitor, measure, manage, and reduce attackable points.

PRIORITIZE SECURITY EFFORTS

Implement security controls, user policies, and education efforts through targeted data and guidance from our Actions, Recommendations, and Observations (AROs) alerts and reporting.

ALIGN WITH CYBER SECURITY FRAMEWORKS

Benefit from vulnerability discovery and reporting based on industry best practice frameworks, including the NIST Cyber Security Framework, ISO 27001, Canadian Centre for Cyber Security Baseline Controls (CCSC BC), Payment Card Industry Data Security Standard (PCI DSS), and Australia's ACSC Essential Eight Mitigation Measures.

GAIN POWERFUL, EASY-TO-USE, COST-EFFECTIVE PROTECTION

Priced for small and mid-size businesses, Covalence integrates easily with all existing systems. Set it up in just 15 minutes, and our system does the heavy lifting to protect you.

STOP SUSPICIOUS EMAIL ACTIVITY

Protect email communications with our Suspicious Email Analysis Service, enabling users to quickly forward any suspect emails to our cyber experts for fast analysis.

ACCESS ROUND-THE-CLOCK SECURITY EXPERTISE

Get help every step of the way. Our expert cyber analysts are available for your security questions, providing the advice you need.

Intelligent alerting. Guided remediation. **Expert counsel.**

Say goodbye to confusing threat alerts, and hello to AROs.

Covalence's sophisticated monitoring and detection technologies and methodologies are transformed into actionable insights that help you quickly and proactively understand the response needed to secure your business.

We deliver analyst-verified threat data as simple, prioritized, actionable reporting that helps you understand your threats as Actions, Recommendations and Observations (AROs). Our proprietary approach removes noise to show you the alerts that matter with the context needed to resolve them.

Say goodbye to a volume of threat alerts that take hours to investigate. No security event logs to sort through. No more time spent gathering data across your network from multiple tools.

NEED HELP? WE'VE GOT YOUR BACK.

Like a professional concierge service, gain the peace of mind that comes from a dedicated team of experienced cyber pros and analysts providing expert support, counsel, and recommendations. From technical support to advice on security strategy, we're at your side to help you continually protect your business.

Experience the advantages of working with cyber leaders and technical veterans. Our team at Field Effect developed Covalence after years of research and development, applying decades of cyber analysis and technology experience from some of the most secure, complex, and fast-paced security environments in the world. We've also helped shape national-level cyber security policies.

WHATS AN ARO?

ACTIONS

When immediate action is needed for an active or imminent threat that could compromise your network or devices, we will flag this as a required Action.

RECOMMENDATIONS

If a suggested change is needed to your network configuration, software, or technology to address specific vulnerabilities or possible threats, we will indicate this as a Recommendation.

OBSERVATIONS

Specific conditions or events in your network may be early indicators of malicious activity that could impact your cyber security. We report this as an Observation.

Covalence threat monitoring, detection, and response platform

Covalence, Field Effect's threat monitoring, detection, and response platform, provides small and mid-size businesses continuous visibility into their IT networks to identify potential threats, vulnerabilities, and malicious activities. By providing easy-to-understand, actionable insights, Covalence helps customers prioritize and resolve cyber security issues and improve their security. The end result is a powerful cyber threat detection system, delivering big business insights without the matching price tag.

The Covalence product line includes Covalence Remote Work, Covalence Cloud, and Covalence Complete.

About Cyber Defenders

Cyber Defenders, LLC is a veteran, and minority-owned cybersecurity software development and consulting firm. We first take the time to analyze our client's current situation and then we provide actions, recommendations, or observations to resolve and enhance your attack surface. We accomplish this by utilizing our own solutions and we also offer award winning partner solutions from Field Effect, Redstor, and as an AWS Technical Partner.
