KIDS

The story continues ...

“In a galaxy far, far away, our Color Kids were on a mission to spread happiness to the stars. The Color Kids, with their magical power of color, were not just bound to Earth — they were cosmic creators of joy!

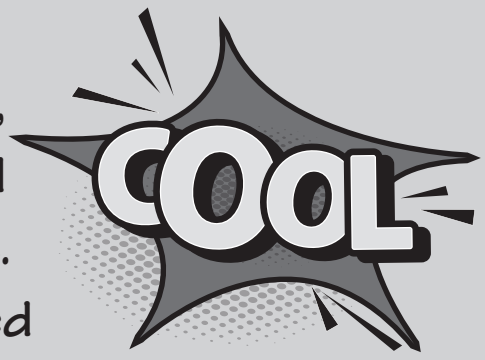

One splendid day, Ruby, the leader of the Color Kids, found a space crayon that sparkled with the colors of the universe. With a twinkle in her eye, she started drawing on the cosmic canvas.

Stars turned into glittering rainbows, planets blazed with hues, and even black holes couldn't resist a swirl of color.

News of this cosmic transformation

WOW

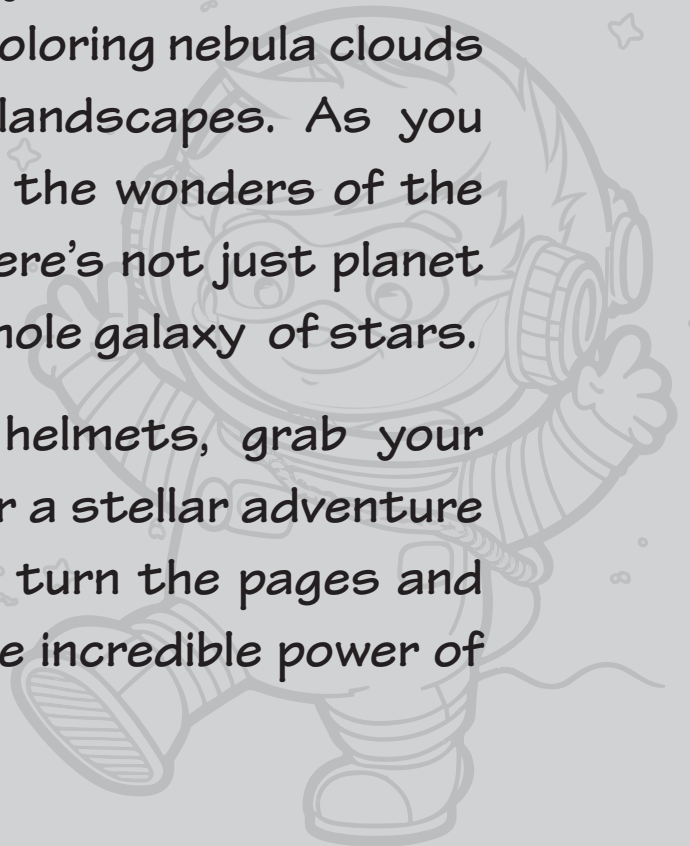

reached the corners of the universe, and soon, more Color Kids joined Ruby in their interstellar quest. With crayons in hand they painted comet trails, colored asteroids, and turned every corner of space into a vibrant masterpiece.

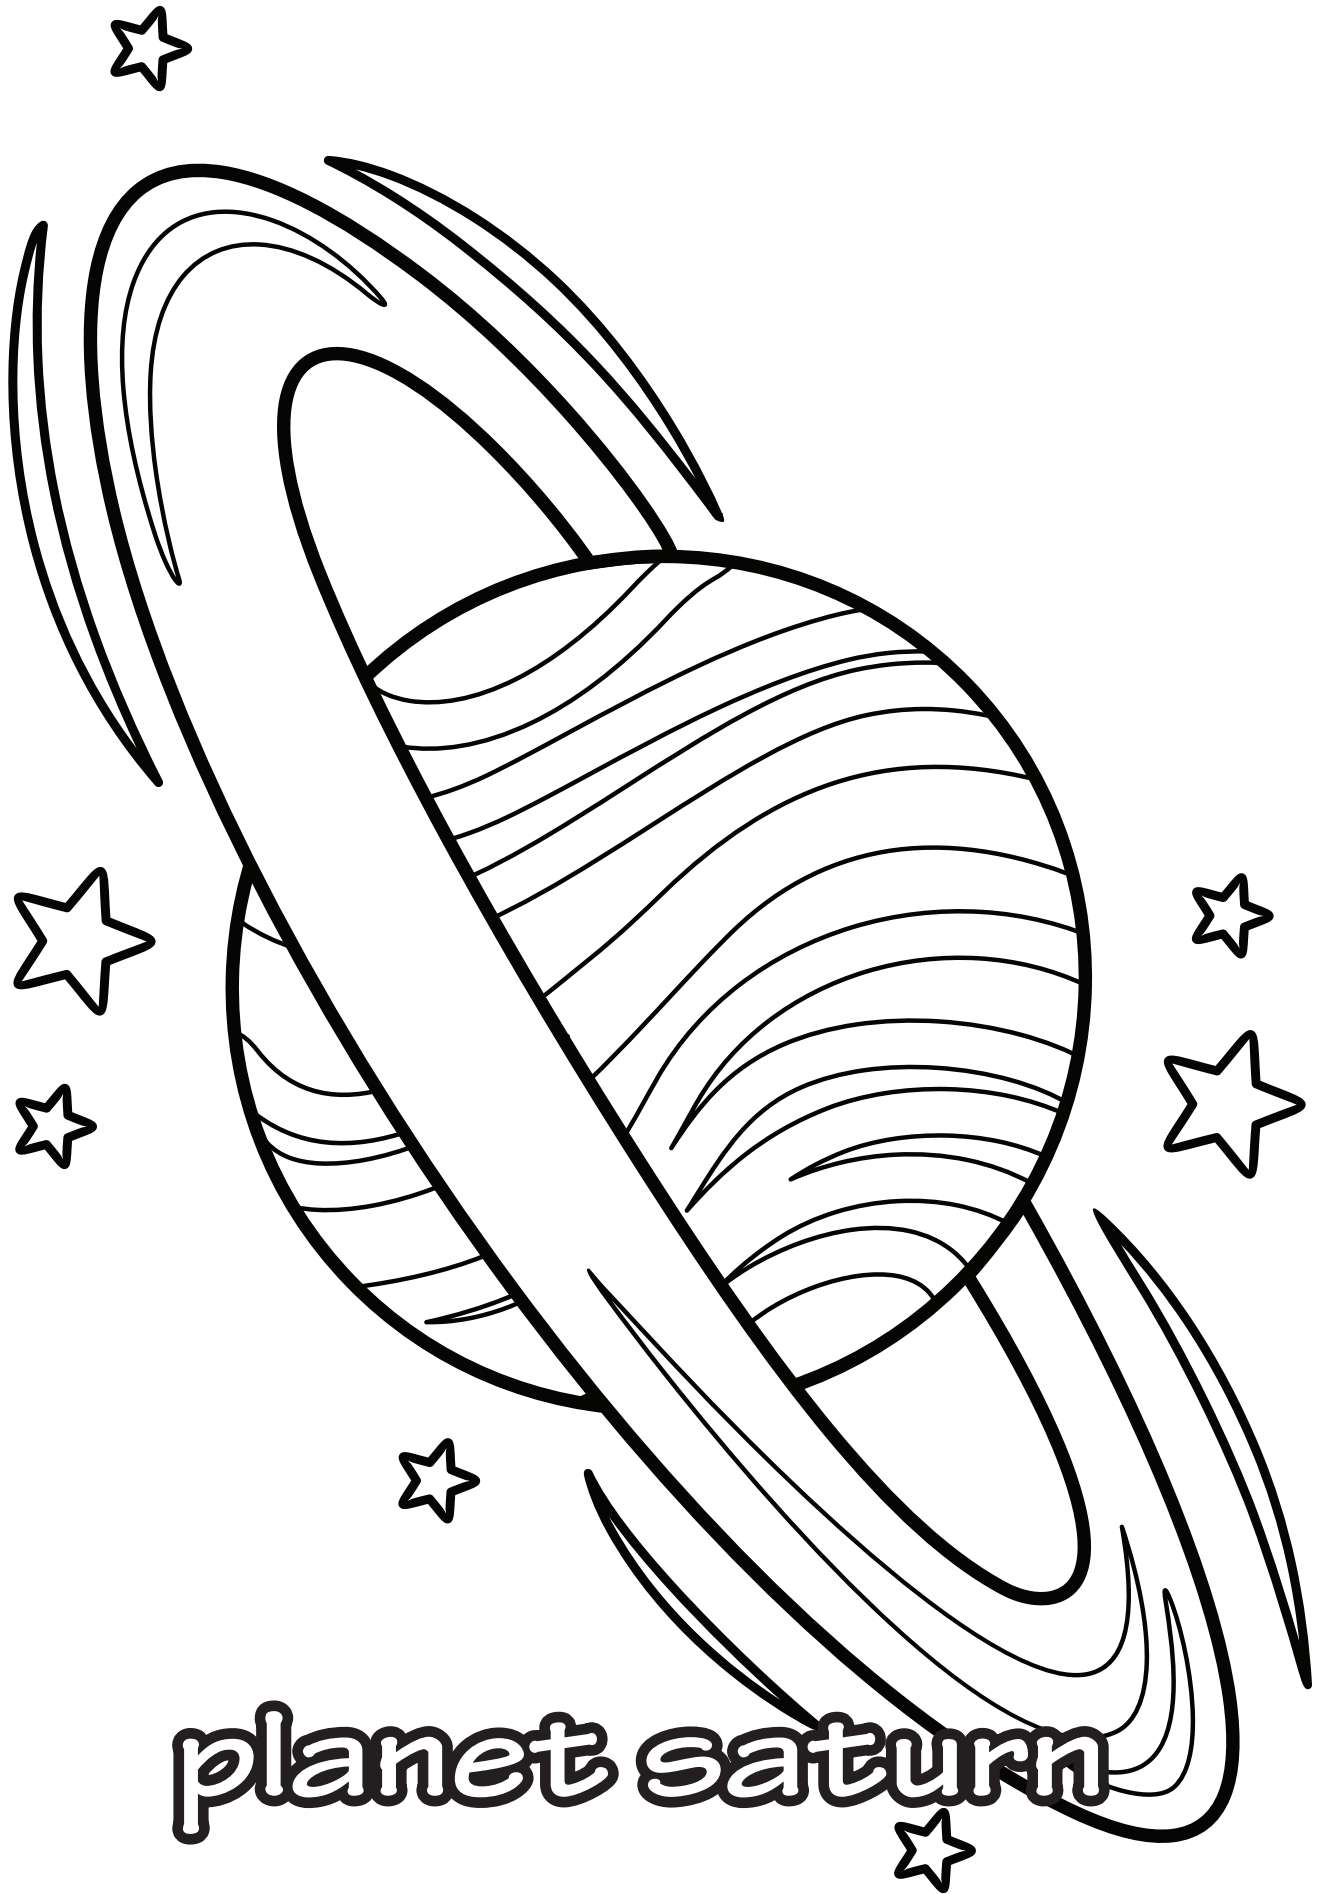

Soon the Color Kids discovered colors beyond their imagination — cosmic shades, that sparkled like intergalactic fireworks. Each had its own magical effect, from the calming Blue Moonbeam to the energetic Red Rocket Blaze.

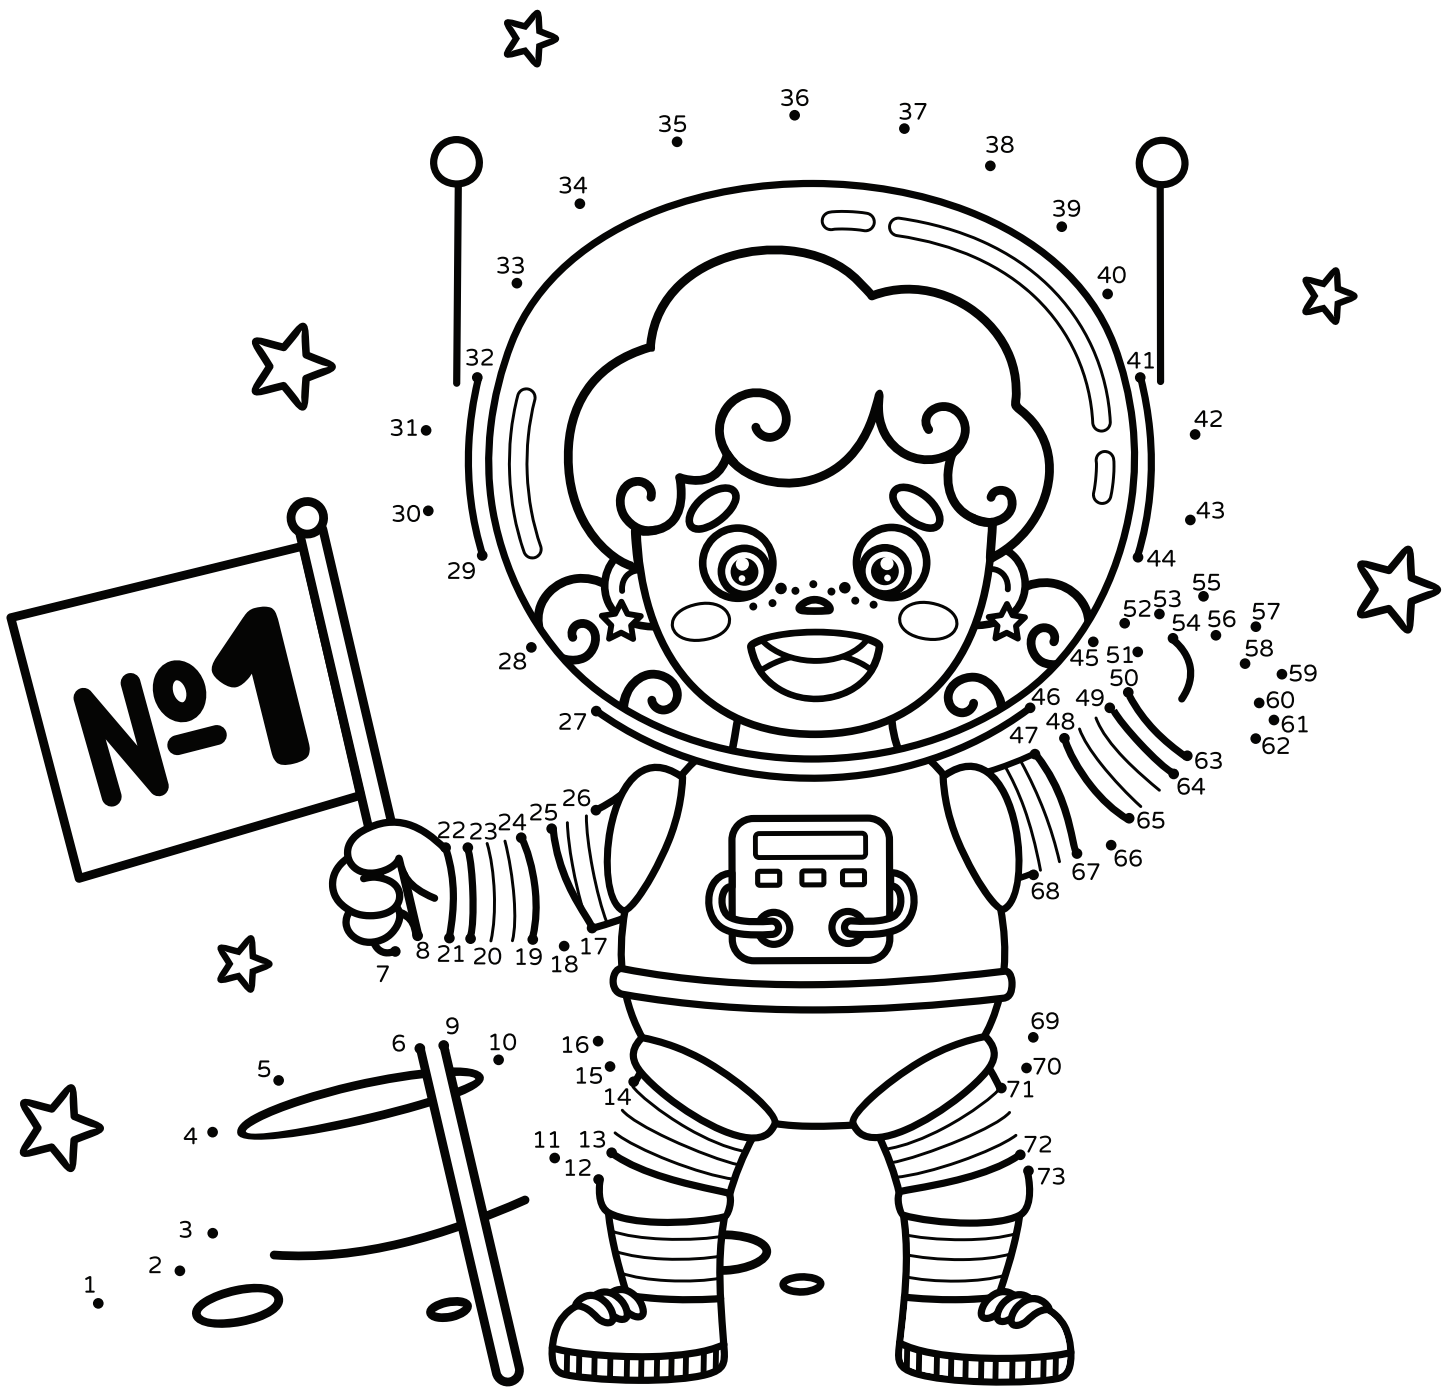

Now, in this cosmic sequel, you get to join the Color Kids as they paint the universe with joy and magic. Each page is a journey through the vastness of space, from coloring nebula clouds to brightening up Alien landscapes. As you explore, you'll learn about the wonders of the world beyond, and how there's not just planet Earth to discover but a whole galaxy of stars.

So, put on your space helmets, grab your crayons, and get ready for a stellar adventure with the Color Kids. Let's turn the pages and paint the cosmos with the incredible power of color together! ”

planet saturn

**best astronaut

Space Facts

SATURN

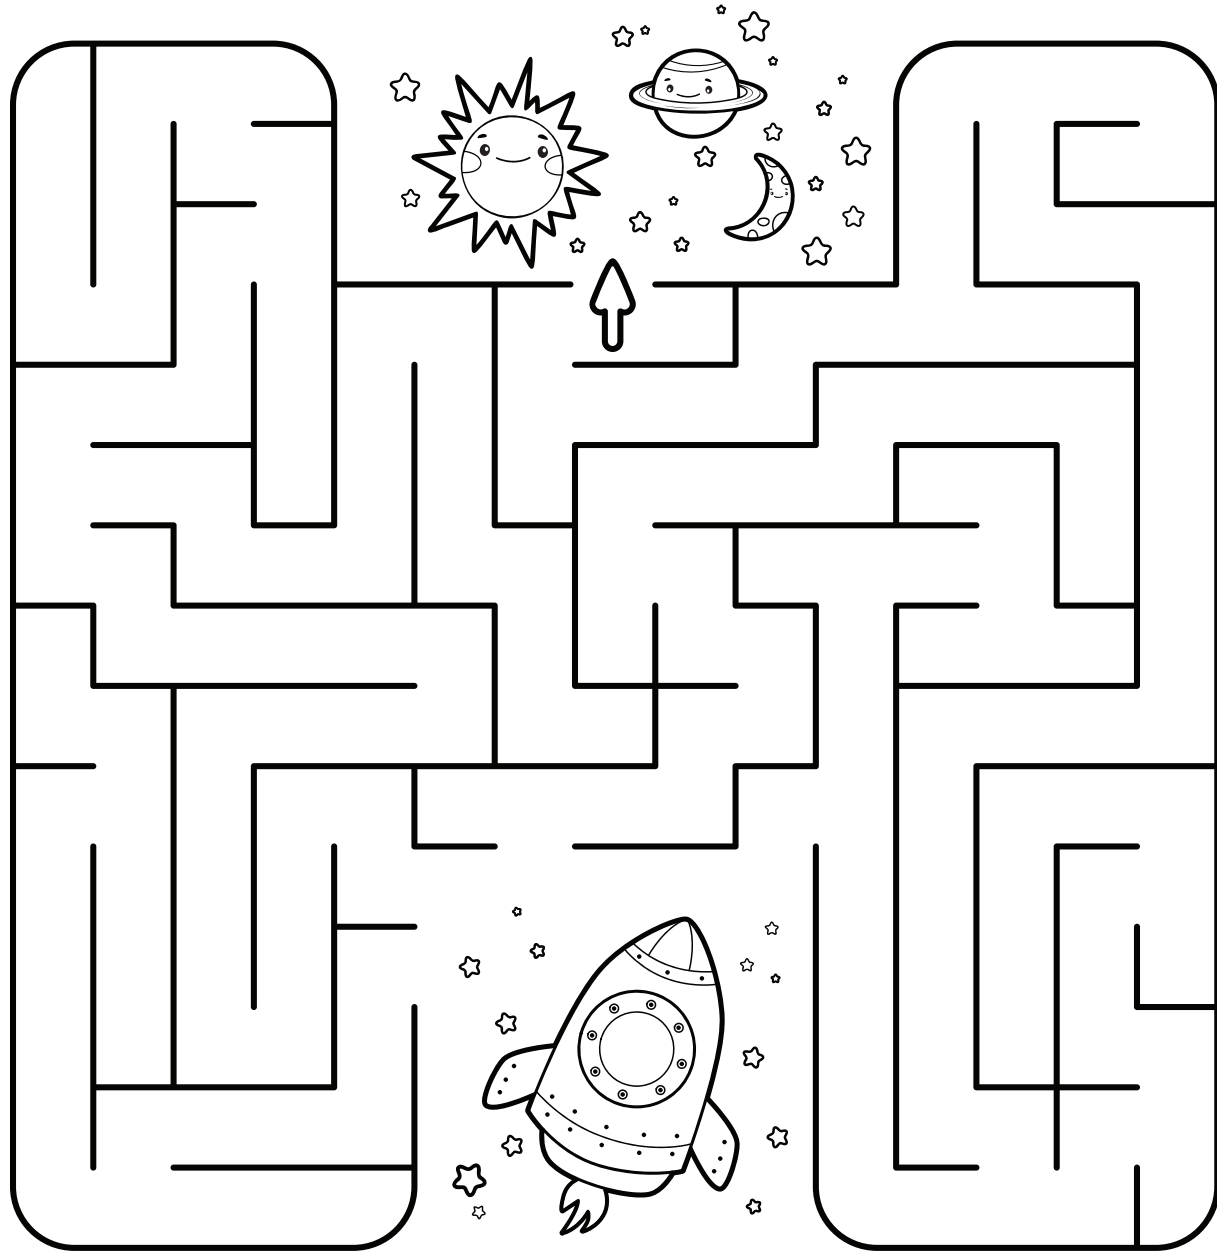

is the lightest planet and the second largest.

There is
water on
Earth
and Mars.

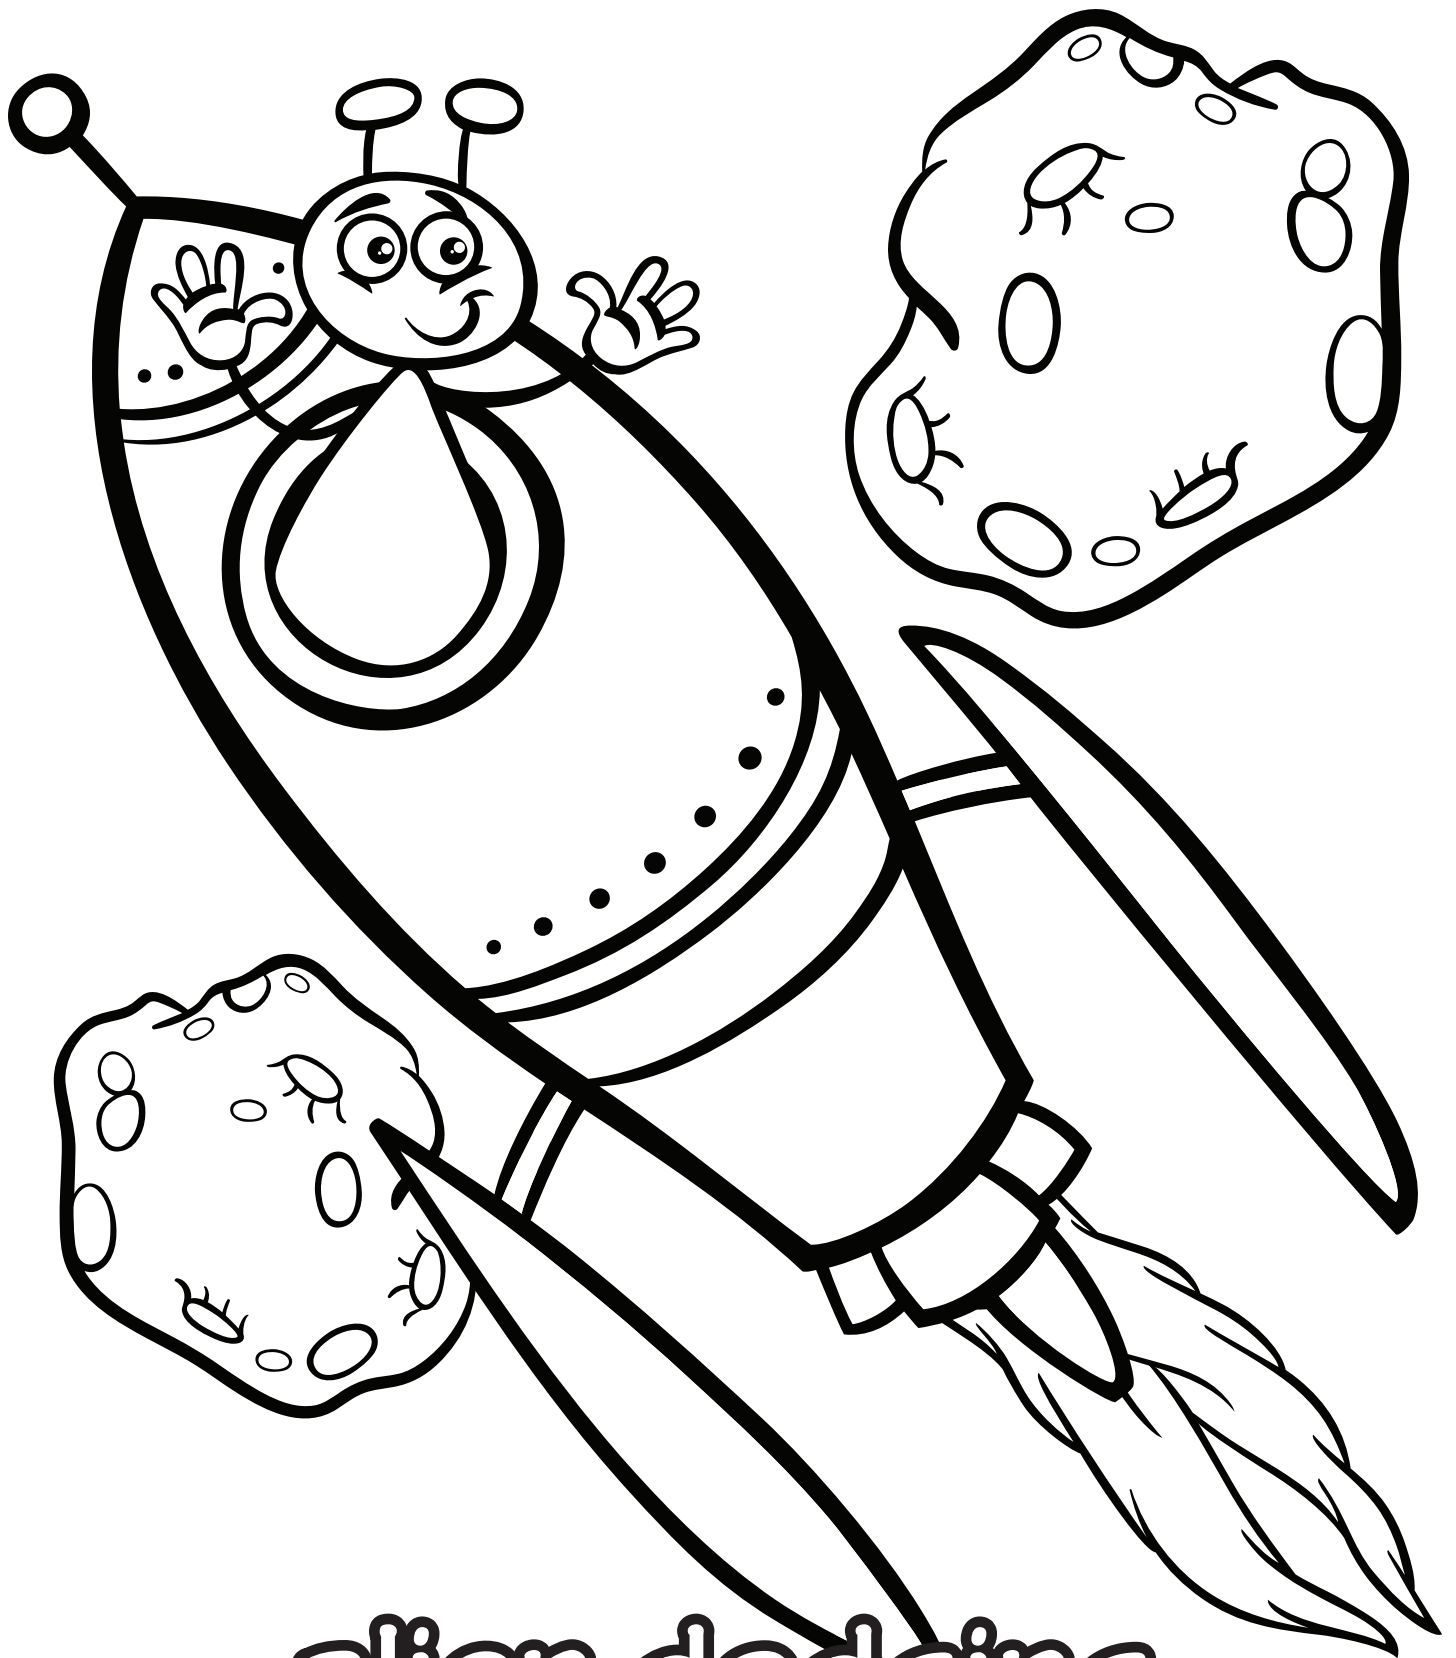

Its density is so low
that it would even
FLOAT IN WATER!
