

Blue Mist Flower

Eupatorium greggii aka *Conoclinium greggii*

Gregg's blue mistflower also called Texas ageratum, is a spreading ground cover that is native to Texas, New Mexico, Arizona and northern Mexico. It typically grows to 12"-18" tall and spreads to 24" wide or more. Ageratum-like powder blue flowers bloom all summer into fall. Flowers have a misty appearance, hence the common name. Divided light green leaves. Flowers are very attractive to butterflies. Sun or partial sun. Perennial.
