

# Brodie Juniper

*Juniperus virginiana* 'Brodie'

A hardy cultivar of native Eastern Red Cedar. Upright growth habit, but spreads width-wise as it ages to provide excellent screening and wind resistance. Tolerates poor soils, is heat and humidity tolerant and **deer resistant**. Mature size can be 30'h x 15'w. Salt tolerant – good along the coast. Brodie is a good habitat plant as it provides thick coverage for our feathered friends. Brodie fits in nicely with both natural and formal landscapes. Dark green color. Evergreen.
