

Salvia miniata

Salvia miniata

A gorgeous, **perennial** salvia for shade! To say **hummingbirds** love it is an understatement! Grows up to 3' x 3', and responds well to pruning. Dies to the ground if we get cold enough – if not, cut it back hard in early spring. Plant in partial sun or shade! Lush grayish-green foliage can take on a purple cast in cooler weather. Blooms **bright red tubular flowers** nearly all year long!
