

Blue Porterweed

Stachytarpheta sp

Any butterfly and hummingbird enthusiast will tell you – porterweed is a must if you want to attract pollinators of all kinds! Blue porterweed is smaller in stature and more delicate looking than other varieties – yet it seems to attract more butterflies and hummingbirds than its larger “kin”. Sun to partial sun. 2’ x 2’ at least – prune to keep full. Normally reseeds and reliably returns year after year.
