

Amethyst Falls Wisteria

Wisteria frutescens 'Amethyst Falls'

Amethyst Falls Wisteria is a compact deciduous vine, native to the United States. It bears stunning cascades of fragrant, lavender-blue flowers. Unlike its more vigorous Asian counterparts, Amethyst Falls is a **native** variety featuring a more restrained growth habit. Since Amethyst Falls won't take over the landscape, it is suitable for smaller gardens or confined spaces. Its leaves and flowers are smaller than those of Asian wisteria, but it is not quite a "dwarf" variety. Flowering on new wood, this wisteria produces a heavy bloom in late spring and a lighter repeat bloom in summer. With its enchanting blooms and manageable size, Amethyst Falls Wisteria is a popular choice for adding a touch of elegance to arbors, trellises, and pergolas in garden landscapes. Full sun to partial shade.
