

Miracle Fruit

Although not sweet itself, when a single fruit is eaten an extraordinary effect occurs. The fruit masks the taste buds, causing bitter and sour foods (such as lemon or lime) to taste sweet. The effect remains for some 30 minutes or more.

Evergreen shrub, grows to 5' in cultivation. Must have acid soil with a pH of 4.5 to 5.8. Grows well with Blueberries.

ALWAYS protect from cold for the first few years after planting.
