

Bauhinia lunaroides

Anacacho Orchid Tree

A very special, hard to find little tree, native to West Texas & Mexico. A spectacular display of white bloom clusters from March to May & a little in the fall.

A deciduous, large shrub or small tree (single or multi-trunk) depending on our winter temperatures. Averages 6' tall but can reach 10'-12' tall. Full sun, good drainage. This is one of the best butterfly attractors in the state! **Butterflies!!!**
