

Cuban Gold Duranta

Duranta erecta

Grow this unique Duranta for its bright chartreuse foliage, its nectar rich light blue/lavenderish flowers and its golden- colored berries, which are enjoyed by birds!. You can trim Cuban Gold into a tight hedge for a more formal look; but, if you leave it to grow naturally, you will get the benefits its flower and berries bring to your habitat garden. Grows 4'-6'h x 3'-4'w. Can freeze to the ground in hard freezes, but normally will come back up from the roots. Likes full sun. **Butterflies, hummingbirds, song birds!!**
