

# Joe Pye Weed 'Baby Joe'

*Eutrochium dubium* (aka *Eupatorium dubium*) PP20320

Easily grown in abundantly moist and fertile soils in full sun to part shade. Also performs well in moist sandy to gravelly soils. Soils must not be allowed to dry out. Generally intolerant of shady locations. Plants may be cut to the ground in late winter. 'Baby Joe' is a **more compact** cultivar than the species, typically growing in a clump to 2-3' tall and 1-2' wide. Great for moist areas in borders, cottage gardens, native plant gardens, wild/naturalized areas, rain gardens or water margins. Fragrant. Butterflies, bees!! (This plant has been moved from the genus *Eupatorium* to the genus *Eutrochium*. *Eupatorium dubium* is a synonym.)
