

# White Cloud Muhly Grass

*Muhlenbergia capillaris* 'White Cloud'

What a stunning grass when the sunlight hits it just right! White Cloud is topped with airy white plumes from fall through mid-winter. The grass is upright and green with a soft texture. During the winter, it provides nourishment for birds as the seeds ripen. Ideal for massed plantings, containers or even as a standout specimen. Grows to about 3'x3'. Clump forming. **Deer resistant.** Once established, is drought tolerant. Full sun. Looks great combined with other grasses.
