

African Blue Basil

Ocimum kilimandscharicum x basilicum purpureum

An outstanding herb for the landscape. African blue is one of the longest blooming basil varieties because it is sterile and will not make seed. It's a dramatic addition to the garden or containers. Excellent, long lasting cut flower too. **Attracts butterflies and bees.** Fragrant, edible and gorgeous! Plant in sun to part sun. Cut or pinch back often to keep the plant full and bushy. Blooms spring through frost – lavender-pinkish bloom spikes on purple blushed leaves. Easy to grow from cuttings.
