

# Walking Kalanchoe

*Kalanchoe synsepala*

A very cool succulent that grows best in pots or hanging baskets in partial sun. Each bright green leaf is edged in burgundy and is somewhat serrated. The plant shoots out “pups” on long flexible stems that can either hang down or if they land or “walk” to some soil they will root and form a new plant. Each leaf can grow 8”+ across. Being a succulent, let it dry out completely between waterings.
