

'Little Psycho™' Wild Coffee

Psychotria nervosa 'Little Psycho'

This dwarf, wild coffee is a much smaller shrub than the typical wild coffee. It has a very compact growth habit, more blooms and more berries compared to most of this species. Rarely gets taller than 30" – somewhat drought and salt tolerant. Small, white blooms spring and summer attract **butterflies**. Red fruit summer into fall that attracts **birds**. Can be grown in shade, partial shade or sun. Protect from prolonged freezing weather.
