

Suwannee Blue-Eyed Grass

Sisyrinchium sp. 'Suwannee'

Found on the banks of the Suwannee River, this selection produces clouds of 3/4" sky-blue flowers in April. Sisyrinchiums are not actually grasses, they're part of the iris family. Suwannee has a compact growth habit and the dense, evergreen foliage grows to 8". Fast-multiplying. Shade or sun, able to take wet conditions.
