

Blue Porterweed

Stachytarpheta jamaicensis

Easy care perennial that thrives in warm weather. 24" - 30" tall spikes of indigo blue flowers stand above a 12" – 18" mound of attractive textured foliage. Surprisingly, the small flowers will attract butterflies more often than large bloomed, showier neighbors. Sun to part sun, average water –will tolerate short periods of drought. Beautiful mixed with other Porterweeds. **Butterflies!**
